**The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education** National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-07-21 In the United States, broad study in an array of different disciplines—arts, humanities, science, mathematics, engineering—as well as an in-depth study within a special area of interest, have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievements of the past century.

Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos. These silos represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs.

**Biology for Engineers, Second Edition** Arthur T. Johnson, 2018-11-08 Biology is a critical application area for engineering analysis and design, and students in engineering programs as well as ecologists and environmentalists must be well-versed in the fundamentals of biology as they relate to their field. Biology for Engineers, Second Edition is

an introductory text that minimizes unnecessary memorization of connections and classifications and instead emphasizes concepts, technology, and the utilization of living things. Whether students are headed toward a bio-related engineering degree or one of the more traditional majors, biology is so important that all engineering students should know how living things work and act. Emphasizing the ever-present interactions between a biological unit and its physical, chemical, and biological environments, the book provides ample instruction on the basics of physics, chemistry, mathematics, and engineering through a systems approach. It brings together all the concepts one needs to understand the role of biology in modern technology. Classroom-tested at the University of Maryland, this comprehensive text introduces concepts and terminology needed to understand more advanced biology literature. Filled with practical detailed examples, the book presents: Presents scientific principles relevant to biology that all engineers, ecologists and environmentalists must know A discussion of biological responses from the perspective of a broad range of fields such as psychology, human factors, genetics, plant and animal physiology, imaging, control systems, actuary, and medicine Includes end of chapter questions to test comprehension Provides updated material to reflect the latest research developments such as CRISPR. Introduces over 150 interesting application examples, incorporating a number of different engineering disciplines. Ties biological systems properties and behaviors to foundational sciences such as engineering sciences, chemistry, etc.

*Origami Design Secrets* Robert J. Lang, 2011-10-05 The magnum opus of one of the world's leading origami artists, the second edition of *Origami Design Secrets* reveals the underlying concepts of origami and how to create original origami designs. Containing step-by-step instructions for 26 models, this book is not just an origami cookbook or list of instructions—it introduces the fundamental building blocks of origami, building up to

advanced methods such as the combination of uniaxial bases, the circle/river method, and tree theory. With corrections and improved illustrations, this new expanded edition also covers uniaxial box pleating, introduces the new design technique of hex pleating, and describes methods of generalizing polygon packing to arbitrary angles. With coverage spanning the foundations of origami construction and advanced methods using both paper and pencil and custom-built free software, *Origami Design Secrets* helps readers cultivate the intuition and skills necessary to develop their own designs. It takes them beyond merely following a recipe to crafting a work of art.

*The Anime Machine* Thomas Lamarre, 2013-11-30 Despite the longevity of animation and its significance within the history of cinema, film theorists have focused on live-action motion pictures and largely ignored hand-drawn and computer-generated movies. Thomas Lamarre contends that the history, techniques, and complex visual language of animation, particularly Japanese animation, demands serious and sustained engagement, and in *The Anime Machine* he lays the foundation for a new critical theory for reading Japanese animation, showing how anime fundamentally differs from other visual media. *The Anime Machine* defines the visual characteristics of anime and the meanings generated by those specifically “animetic” effects—the multiplanar image, the distributive field of vision, exploded projection, modulation, and other techniques of character animation—through close analysis of major films and television series, studios, animators, and directors, as well as Japanese theories of animation. Lamarre first addresses the technology of anime: the cells on which the images are drawn, the animation stand at which the animator works, the layers of drawings in a frame, the techniques of drawing and blurring lines, how characters

are made to move. He then examines foundational works of anime, including the films and television series of Miyazaki Hayao and Anno Hideaki, the multimedia art of Murakami Takashi, and CLAMP's manga and anime adaptations, to illuminate the profound connections between animators, characters, spectators, and technology. Working at the intersection of the philosophy of technology and the history of thought, Lamarre explores how anime and its related media entail material orientations and demonstrates concretely how the "animetic machine" encourages a specific approach to thinking about technology and opens new ways for understanding our place in the technologized world around us.

*Conversations with Shōtetsu* Robert Brower, Steven Carter, 2020-08-06 Shōtetsu monogatari was written by a disciple of Shōtetsu (1381–1459), whom many scholars regard as the last great poet of the courtly tradition. The work provides information about the practice of poetry during the 14th and 15th centuries, including anecdotes about famous poets, advice on how to treat certain standard topics, and lessons in etiquette when attending or participating in poetry contests and gatherings. But unlike the many other works of that time that stop at that level, Shōtetsu's contributions to medieval aesthetics gained prominence, showing him as a worthy heir—both as poet and thinker—to the legacy of the great poet-critic Fujiwara no Teika (1162–1241). The last project of the late Robert H. Brower, *Conversations with Shōtetsu* provides a translation of the complete *Nihon koten bungaku taikei* text, as edited by Hisamatsu Sen'ichi. Steven D. Carter has annotated the translation and provided an introduction that details Shōtetsu's life, his place in the poetic circles of his day, and the relationship of his work to the larger poetic tradition of medieval Japan. *Conversations with Shōtetsu* is important reading for anyone interested in medieval

Japanese literature and culture, in poetry, and in aesthetics. It provides a unique look at the literary world of late medieval Japan.

**Bargainin' for Salvation** Steven Heine, 2009-05 Throughout his various stages, Dylan's work reveals an affinity with the Zen worldview, where enlightenment can be attained through self-contemplation and intuition rather than through faith and devotion. Much has been made of Dylan's Christian periods, but never before has a book engaged Dylan's deep and rich oeuvre through a Buddhist lens.--Back cover.

**Shifting Shape, Shaping Text** Steven Heine, 1999-12-01 According to the fox koan, the second case in the Wu-men kuan koan collection, Zen master Pai-chang encounters a fox who claims to be a former abbot punished through endless reincarnations for denying the efficacy of karmic causality. In the end he is liberated by Pai-chang's turning word, which asserts the inexorability of cause-and-effect. Most traditional interpretations of the koan focus on the philosophical issue of causality in relation to earlier Buddhist doctrines, such as dependent origination and emptiness. Dogen, the founder of the Japanese Soto school, devoted two fascicles of the Shobogenzo exclusively to the fox koan. One fascicle supports a paradoxical view of causality and non-causality, the two being two sides of the same coin; the second strongly attacks this interpretation and defends a literal reading that asserts causality and denies non-causality. Dogen's apparent change of heart on this topic has inspired scholars of the recent Critical Buddhist methodology to evaluate the merits and weaknesses in Zen's attitude toward ethical issues and social affairs. *Shifting Shape, Shaping Text* examines the fox koan in relation to philosophical and institutional issues facing the Ch'an/Zen tradition in both Sung China and medieval and contemporary Japan.

Steven Heine integrates his own philological analysis of the koan, textual analysis of koan collections and related literary genres in T'ang and Sung China, folklore studies, recent discourse theory, Dogen studies, and research on monastic codes and institutional history to craft an original and compelling work. More specifically, he illuminates a fascinating dimension of the entire Ch'an/Zen tradition as he carefully lays out the philosophical issues in the koan concerning causality/karma and enlightenment, the ethical issues contained therein, the bearing that certain interpretations of causality had on the creation of monastic codes and institutional security in China, the relation between Zen and folk religion as revealed by the koan, and the issue of possible antinomianism in Zen, especially as grappled with by later thinkers such as Dogen and contemporary representatives of Critical Buddhism. Finally he applies theories of high and low religion and contemporary discourse and in the process rethinks the theories and their applicability across cultures. Far-reaching yet rigorous, *Shifting Shape, Shaping Text* will not only attract the interest of Ch'an/Zen specialists, but also those studying folklore, popular religion, and issues concerning the nature of discourse and the relation between high and low religions.
