Computing and Philosophy Vincent C. Müller, 2015-12-16 This volume offers very selected papers from the 2014 conference of the “International Association for Computing and Philosophy” (IACAP) - a conference tradition of 28 years. The theme of the papers is the two-way relation between computing technologies and philosophical questions: Computing technologies both raise new philosophical questions, and shed light on traditional philosophical problems. The chapters cover: 1) philosophy of computing, 2) philosophy of computer science & discovery, 3) philosophy of cognition & intelligence, 4) computing & society, and 5) ethics of computation.

Robot Ethics 2.0 Patrick Lin,Keith Abney,Ryan Jenkins,2017-09-01 The robot population is rising on Earth and other planets. (Mars is inhabited entirely by robots.) As robots slip into more domains of human life--from the operating room to the bedroom--they take on our morally important tasks and decisions, as well as create new risks from psychological to physical. This makes it all the more urgent to study their ethical, legal, and policy impacts. To help the robotics industry and broader society, we need to not only press ahead on a wide range of issues, but also identify new ones emerging as quickly as the field is evolving. For instance, where military robots had received much attention in the past (and are still controversial today), this volume looks toward autonomous cars here as an important case study that cuts across diverse issues, from liability to psychology to trust and more. And because robotics feeds into and is fed by AI, the Internet of Things, and other cognate fields, robot ethics must also reach into those domains, too. Expanding these discussions also means listening to new voices; robot ethics is no longer the concern of a handful of scholars. Experts from different academic disciplines and geographical areas are now playing vital roles in shaping ethical, legal, and policy discussions worldwide. So, for a more complete study, the editors of this volume look beyond the usual suspects for the latest thinking. Many of the views as represented in this cutting-edge volume are provocative--but also what we need to push forward in unfamiliar territory.

Critique in Design and Technology Education P John Williams, Kay Stables, 2017-02-21 This book addresses notions of critique in Design and Technology Education, facilitating a conceptual and practical understanding of critique, and enabling both a personal and pedagogical application to practice. Critique can be a frame of mind, and may be related to a technology, product, process or material. In a holistic sense, critique is an element of a person's technological literacy, a fundamentally critical disposition brought to bear on all things technological. This book provides a reasoned conceptual framework within which to develop critique, and examples of applying the framework to Design and Technology Education. The book builds on *The Future of Technology Education* published by Springer as the first in the series *Contemporary Issues in Technology Education*. In the 21st century, an 'age of knowledge', students are

called upon to access, analyse and evaluate constantly changing information to support personal and workplace decision making and on-going innovation. A critical Design and Technology Education has an important role to play, providing students with opportunities to integrate economic, environmental, social and technological worlds as they develop and refine their technological literacy. Through the design and development of technology, they collaborate, evaluate and critically apply information, developing cognitive and manipulative skills appropriate to the 21st century. Critique goes beyond review or analysis, addressing positive and negative technological development. This book discusses and applies this deeper perspective, identifying a clear role for critique in the context of Design and Technology Education.

Mentality and Machines Keith Gunderson, 1985 *Mentality and Machines* was first published in 1985. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. *Mentality and Machines* — with a new preface and an extended postscript—is a general essay on the philosophy of mind, oriented to philosophical and psychological questions about real as well as imagined, robots and machines. The second edition retains all of the essays from the original book, including Gunderson's influential critique (The Imitation Game) of A.M. Turing's treatment of the question Can machines think? and his controversial distinction between program-receptive and program-resistant aspects of the mind. This edition's postscript includes further reflections on these themes and others, and relates them to recent writings of other philosophers and computer scientists.

Robot Law Ryan Calo, A Michael Froomkin, Ian Kerr, 2016-01-29 Like the Internet before it, robotics is a socially and economically transformative technology. Robot Law explores how the increasing sophistication of robots and their widespread deployment into hospitals, public spaces, and battlefields requires rethinking of a wide variety of philosophical and public policy issues, including how this technology interacts with existing legal regimes, and thus may inspire changes in policy and in law. This volume collects the efforts of a diverse group of scholars who each, in their own way, has worked to overcome barriers in order to facilitate necessary and timely discussions of a technology in its infancy. Identifying controversial legal,

ethical, and philosophical problems, the authors reveal how issues surrounding robotics and regulation are more complicated than engineers could have anticipated, and just how much definitional and applied work remains to be done. This groundbreaking examination of a brand-new reality will be of interest and of use to a variety of groups as the authors include engineers, ethicists, lawyers, roboticists, philosophers, and serving military.
