He discusses popular high-performance tubular suspension arms and sway bars, so you can find the right combination of performance and adjustability. The suspension system has to operate as an integrated part of the car, so you're shown how to select best suspension package for a well-balanced and responsive car. You can harness the potential performance potential of your muscle car and put much more power to the ground with critical chassis and suspension updates and products. Build the Perfect Beast Mark Christensen,2016-06-07 Mark Christensen grew up with a simple dream-to build a 600 horsepower suicide machine able to accelerate from zero to sixty in less time than it takes to read this sentence. When a friend offers him \$100,000 to realize that dream, Christensen enlists Nick Pugh, the best young auto designer in the country. An idealistic, charismatic, twenty-two year old star student from the celebrated Art Center for Design in Pasadena, Pugh shows Christensen his sketches of the Xeno I-drawings that are stunningly original and strangely familiar-as if they were the best ideas I never had. Thus inspired, the author sets out to assemble a best of the best group of engineers, mechanics and fabricators. But the dream becomes grander and the designs of the Xeno evolve spectacularly after the endlessly hard working utopian Pugh develops an ingenious method for automobiles to triple their driving range. And as new and wilder Xenos fly from Pugh's monster imagination, nothing seems impossible. That is until the author discovers that \$100,000 may not even pay for the hubcaps that Pugh has envisioned. Build the Perfect Beast is a window into 21st century technology and cutting edge design at its most relevant and bizarre-an epic odyssey about craft, cars, opportunity and ambition that sizzles like American Graffiti on acid. This is a classic tale of chasing down the American dream.

How to Build a Racing Car Floyd Clymer,2010-06 Originally published in 1949 by Floyd Clymer, this edition was republished in 2010 by VelocePress. This comprehensive and informative book, written in easy to understand language, puts the capability of designing and building a 1950's era midget racing car or a three-quarter (dirt track) car within reach of the home-based enthusiast. The fundamental principles described in this book may also be applied to the construction of a 50's track roadster or even a custom built hot rod. Highly technical terminology and engineering terms have been avoided, as the aim of this book is to define the construction process in clear and understandable terms, regardless of the reader's technical background or training. The principles it contains are just as relevant today as they were some 50 years ago when this book was first written. The design process is clearly explained, the raw materials required are described, and the construction process is presented in an easy-to-follow step by step procedure. Obviously, this book would also be a valuable reference for anyone contemplating repairing, refurbishing or restoring a vintage racing car. This edition also includes a 38 page bonus section featuring a reproduction of an appropriate Offenhauser Speed Equipment catalog. Out-of-print and unavailable for many years, this book is becoming increasingly more difficult to find on the secondary market and we are pleased to be able to offer this reproduction as a service to all those vintage automotive race car builders and enthusiasts worldwide.
