Thom Brooks

A Hybrid Theory of Metaphor M. Tendahl, 2009-08-27 A provoking new approach to how we understand metaphors thoroughly comparing and contrasting the claims made by relevance theorists and cognitive linguists. The resulting hybrid theory shows the complementarity of many positions as well as the need and possibility of achieving a broader and more realistic theory of our understanding.

Expressing Our Attitudes Mark Schroeder, 2015-08-27 When the logical positivists espoused emotivism as a theory of moral discourse, they assumed that their general theories of meaning could be straightforwardly applied to the subject of metaethics. The philosophical research program of expressivism, emotivism's contemporary heir, has called this assumption into question. In this volume Mark Schroeder argues that the only plausible ways of developing expressivism or similar views require us to re-think what we may have thought that we knew about propositions, truth, and the nature of attitudes like belief and desire. Informed by detailed scrutiny of the structural problems about understanding complex thoughts, he develops a range of alternative expressivist frameworks in detail as illustrations of general lessons, and applies them not just to metaethics, but to epistemic expressions and even to truth itself. *Expressing Our Attitudes* pulls together over a decade of work by one of the leading figures in contemporary metaethics. Two new and seven previously published papers weave treatments of propositions, truth, and the attitudes together with detailed development of competing alternative expressivist frameworks and discussion of their relative advantages. A substantial new introduction both offers new arguments of its own, and provides a map to reading these essays as a unified argument. Along with its sister volume, *Explaining the Reasons We Share*, this volume advances the theme that metaethical inquiry is continuous with other areas of philosophy.

Atomism in Philosophy Ugo Zilioli, 2020-11-12 The nature of matter and the idea of indivisible parts has fascinated philosophers, historians, scientists and physicists from antiquity to the present day. This collection covers the richness of its history, starting with how the Ancient Greeks came to assume the existence of atoms and concluding with contemporary metaphysical debates about structure, time and reality. Focusing on important moments in the history of human thought when the debate about atomism was particularly flourishing and transformative for the scientific and philosophical spirit of the time, this collection covers: - The discovery of atomism in ancient philosophy - Ancient non-Western, Arabic and late Medieval thought - The Renaissance, when along with the re-discovery of ancient thought, atomism became once again an important doctrine to be fully debated - Logical atomism in early analytic philosophy, with Russell and Wittgenstein - Atomism in Liberalism and Marxism - Atomism and the philosophy of time - Atomism in contemporary metaphysics - Atomism and the sciences Featuring 28 chapters by leading and younger scholars, this valuable collection reveals the development of one of philosophy's central doctrines across 2,500 years and within a broad range of philosophical traditions.

Caging the Beast Paula Droege, 2003-06-30 A major obstacle for materialist theories of the mind is the problem of sensory consciousness. How could a physical brain produce conscious sensory states that exhibit the rich and luxurious qualities of red velvet, a Mozart concerto or fresh-brewed coffee? *Caging the Beast: A Theory of Sensory Consciousness* offers to explain what these conscious sensory states have in common, by virtue of being conscious as opposed to unconscious states. After arguing against accounts of consciousness in terms of higher-order representation of mental states, the theory claims that sensory consciousness is a special way we have of representing the world. The book also introduces a way of thinking about subjectivity as separate and more fundamental than consciousness, and considers how this foundational notion can be developed into more elaborate varieties. An appendix reviews

the connection between consciousness and attention with an eye toward providing a neuropsychological instantiation of the proposed theory. (Series A)

Noncognitivism in Ethics Mark Schroeder, 2023-07-18 According to noncognitivists, when we say that stealing is wrong, what we are doing is more like venting our feelings about stealing or encouraging one another not to steal, than like stating facts about morality. These ideas challenge the core not only of much thinking about morality and metaethics, but also of much philosophical thought about language and meaning. Noncognitivism in Ethics is an outstanding introduction to these theories, ranging from their early history through the latest contemporary developments. Beginning with a general introduction to metaethics, Mark Schroeder introduces and assesses three principal kinds of noncognitivist theory: the speech-act theories of Ayer, Stevenson, and Hare; the expressivist theories of Blackburn and Gibbard; and hybrid theories. He pays particular attention both to the philosophical problems about what moral facts could be about or how they could matter, which noncognitivism seeks to solve, and to the deep problems that it faces, including the task of explaining both the nature of moral thought and the complexity of moral attitudes, and the 'Frege-Geach' problem. This second edition has been revised and updated throughout. It includes new sections on whether expressivism is a metasemantic thesis; the rise of relational expressivism; the idea that expressivism leads us to a novel understanding of the nature of propositions; and expressivism and epistemic modals, deontic modals, probability, and truth. Schroeder makes even the most difficult material accessible by offering crucial background along the way. Also included are exercises at the end of each chapter, chapter summaries, and a glossary of technical terms, making Noncognitivism in Ethics essential reading for all students of ethics and metaethics.

Making Morality Work Holly M. Smith, 2018 What should we do if we cannot figure what morality requires of us? Holly M. Smith argues that the best moral codes solve this problem by offering two tiers, one of which tells us what makes acts right and wrong, and the other of which provides user-friendly decision guides. She opens a path towards resolving a deep problem of moral life.

Advances in Experimental Philosophy of Language Jussi Haukioja, 2015-05-21 Should philosophy of language use experimental methods, or can it be pursued in the armchair? Advances in Experimental Philosophy of Language represents a balanced variety of positions on this extensively discussed question. In the first collection of its kind, leading experts in the field present a number of different perspectives on the relevance of experimental methods in philosophy of language, ranging from complete dismissals of traditional methods to defences of armchair approaches. As well as exploring possible novel experimental techniques, Advances in Experimental Philosophy of Language evaluates the philosophical relevance of existing experimental results and presents new data from new experimental studies. For scholars looking to stay ahead of the latest developments and trends in the philosophy of language, this important contribution to the field brings the reader up-to-date.

What Is Good and Why Richard Kraut, 2009-07-01 What is good, how do we know, and how important is it? Kraut reorients these questions around the notion of what causes human beings to flourish. Extending his argument to include plants and animals, Kraut applies a general principle to the entire living world: what is good for complex organisms consists in the exercise of their natural powers.

Having it Both Ways Guy Fletcher, Michael R. Ridge, 2014 The two main competing traditions in mainstream metaethics are cognitivism and non-cognitivism. The traditional view of this divide is that the cognitivist understands moral (and other normative) judgments as representational states (e.g. beliefs) whereas the non-cognitivist understands them instead as non-representational states

- typically as desire-like states of some kind (e.g. emotions, plans, preferences). Because moral and other normative judgments genuinely do seem to have both belief-like and desire-like elements, this debate has seen each side going through seemingly endless epicycles to either accommodate or debunk what the other side explains easily. Recently, there has been an explosion of interest in theories which transcend these categories by holding that moral and other normative judgments are themselves constituted by both belief-like and desire-like elements and/or that moral and other normative judgments 'express' both belief-like and desire-like states. These are called hybrid theories. The papers in this volume, all new, both provide a guide to the state of the art in this debate and push it forward along numerous fronts--

Metametaphysics David Chalmers, David Manley, Ryan Wasserman, 2009-02-19 Metaphysics asks questions about existence: for example, do numbers really exist? Metametaphysics asks questions about metaphysics: for example, do its questions have determinate answers? If so, are these answers deep and important, or are they merely a matter of how we use words? What is the proper methodology for their resolution? These questions have received a heightened degree of attention lately with new varieties of ontological deflationism and pluralism challenging the kind of realism that has become orthodoxy in contemporary analytic metaphysics. This volume concerns the status and ambitions of metaphysics as a discipline. It brings together many of the central figures in the debate with their most recent work on the semantics, epistemology, and methodology of metaphysics.

The Practice of Punishment Wesley Cragg, 2003-09-02 This study focuses on the practice of punishment, as it is inflicted by the state. The author's first-hand experience with penal reform, combined with philosophical reflection, has led him to develop a theory of punishment that identifies the principles of sentencing and corrections on which modern correctional systems should be built. This new theory of punishment is built on the view that the central function of the law is to reduce the need to use force in the resolution of disputes. Professor Cragg argues that the proper role of sentencing and sentence administration is to sustain public confidence in the capacity of the law to fulfil that function. Sentencing and corrections should therefore be guided by principles of restorative justice. He points out that, although punishment may be an inevitable concomitant of law enforcement in general and sentencing in particular, inflicting punishment is not a legitimate objective of criminal justice. The strength and appeal of this account is that it moves well beyond the boundaries of conventional discussions. It examines punishment within the framework of policing and adjudication, analyses the relationship between punishment and sentencing, and provides a basis for evaluating correctional practices and such developments as electronic monitoring.

Friendship and Agent-Relative Morality Troy A. Jollimore, 2018-10-30 First Published in 2001. Routledge is an imprint of Taylor & Francis, an informa company.

The Referential Mechanism of Proper Names Jincai Li, 2022-09-30 Each of us bears a unique name given to us at birth. When people use your name, they typically refer to you. But what is the linkage that ties a name to a person and hence allows it to refer? Li's book approaches this question of reference empirically through the medium of referential intuitions. Building on the literature on philosophical and linguistic intuitions, she proposes a linguistic-competence-based account of referential intuitions. Subsequently, using a series of novel experiments, she investigates the variation of referential intuitions across different cultures, as well as the developmental trajectory and the underlying causes of the observed cultural differences. What she finds is that the cultural patterns of referential intuitions are already in place around age seven, and the differences are largely attributable to the distinct perspective-

taking strategies favoured by easterners and westerners, rather than the moral valence of actions involved in the experimental materials. These results are taken to better support referential pluralism (in particular, the ambiguous view) than referential monism. By undertaking this fascinating research, Li's book provides new insights into the cognitive mechanism underlying people's referential usage of names. It will be valuable to students and scholars of linguistics, philosophy of language and experimental philosophy, and in particular, to those who research into semantic intuitions and theories of reference.

Shame Punishment Thom Brooks, 2019-10-28 Shame punishment has existed for perhaps as long as people have been punished, and the issue has been revisited in recent years to help improve crime reduction efforts. In this collection, shame punishment is examined from various critical perspectives, including its relation with expressivism, the diversity of shame punishment used today, the link between shame punishment and restorative justice, the relationship between dignity and shame punishment, shame punishment and its use for sex offenders, and critics of shame punishment in its different incarnations. The selected essays are from leading experts and represent the most important contributions to scholarly research in the field.

Technical Artefacts: Creations of Mind and Matter Peter Kroes, 2012-05-24 This book presents an attempt to understand the nature of technical artefacts and the way they come into being. Its primary focus is the kind of technical artefacts designed and produced by modern engineering. In spite of their pervasive influence on human thinking and doing, and therefore on the modern human condition, a philosophical analysis of technical artefacts and engineering design is lacking. Among the questions addressed are: How do technical artefacts fit into the furniture of the universe? In what sense are they different from objects from the natural world, or from the social world? What kind of activity is engineering design and what does it mean to say that technical artefacts are the embodiment of a design? Does it make sense to consider technical artefacts to be morally good or bad by themselves because of the way they influence human life? The book advances the thesis that technical artefacts, conceived of as physical constructions with a technical function, have a dual nature; they are hybrid objects combining physical and intentional features. It proposes a theory of technical functions and technical artefact kinds that does justice to this dual nature, analyses engineering design from the dual nature point of view, and argues that technical artefacts, because of their dual nature, have inherent moral significance.

Just Sentencing Richard S. Frase, 2013-01-17 This title presents a fully developed punishment theory which incorporates both utilitarian and retributive sentencing purposes. The author describes and defends a hybrid sentencing model that integrates theory and practice - blending and balancing both the competing principles of retribution and rehabilitation and the procedural concern of weighing rules against discretion.

Well-Being and Theism William A. Lauinger, 2012-07-12 Well-Being and Theism is divided into two distinctive parts. The first part argues that desire-fulfillment welfare theories fail to capture the 'good' part of 'good for', and that objective list welfare theories fail to capture the 'for' part of 'good for'. Then, with the aim of capturing both of these parts of 'good for', a conjunctive theory-one which places both a value constraint and a desire constraint on well-being-is advanced. Lauinger then defends this proposition, which he calls the desire-perfectionism theory, against possible objections. In the second part, Lauinger explores the question What metaphysics best supports the claim that the vast majority of humans have the desires for friendship, accomplishment, health, etc., built into themselves? It is argued that there are two general metaphysical routes that might convincingly be taken here, and that each one leads us toward theism.

Looking Into Pictures Heiko Hecht, Robert Schwartz, Margaret Atherton, 2003 In this text, philosophers, psychologists and art historians explore the implications of theories of vision for our understanding of the nature of pictorial representation and picture perception.
