The Collagen Glow: A Guide to Ingestible Skincare Sally Olivia Kim, 2018-10-23 All the lotions, potions, and skin-tightening masks in the world won't accomplish what a daily dose of collagen may do. And now that collagen is easier than ever to find and use, in powdered and liquid supplements, readers need *The Collagen Glow*. Packed with 40 delicious recipes, this book is the ultimate guide to choosing and using collagen. It includes information on how collagen is harvested, what to look for in an ingredient list, and how to take it to the next level with an easy 10-step plan. Skincare entrepreneur Sally Kim grew up drinking her Korean grandmother's bone broth—essentially collagen broth—so when she experienced a painful burn and turned to collagen to heal and regenerate her skin, it was an epiphany. She realized that collagen is actually the key to the world-renowned “ten-step” Korean beauty routine. Here, Kim offers a different ten-step plan that includes ingesting collagen for good skin, healthy joints, and strong hair and nails.

**Embodied Computing** Isabel Pedersen, 2020 Embodied technologies such as wearable tracking bracelets, ingestible sensors, embeddable prosthetics, and implantable microchips all stand to redefine the human experience and what it means to speak of technology and the body. No longer the speculative stuff of science fiction, embodied technologies have arrived and are being developed by a variety of industries at an alarming rate. Embodied technologies augment the body's phenomenological interaction with the world and depend on an agent's body to transmit energy and information. Varieties of wearable, ingestible, embeddable, and implantable technologies have become constitutive of new hybrid bodies, blurring the line separating the human from the technological. Yet, bodies constantly negotiate demands made by technology--both humanizing and dehumanizing. Embodied Technology: Wearables, Implantables, Embeddables, Ingestibles is a collection by key practitioners and theorists in the field and analyzes a variety of sociotechnical themes and devices as agents in dialogue with the human body and subjectivity--

*PREPARATION AND USE OF STANNOUS FLUORIDE SOLUTIONS AND INGESTIBLE DENTIFRICE.* ,1966 The materials listed in the report were developed in the Experimental Dentistry Branch, USAF School of Aerospace Medicine, in response to specific USAF requirements in preventive dentistry. This review outlines procedures for the preparation and use of these compounds and, when applicable, provides directions for obtaining the fully prepared material. The USAF Dental Service endorsement of

the SAM series of topical SnF<sub>2</sub> agents is based upon in vitro studies demonstrating the ability of these preparations to protect dental enamel from acid decalcification. It has been shown that: (a) stannous fluoride solutions of low concentration provide excellent protection, and (b) stannous fluoride should be frequently applied to provide maximal benefit.

**Embodied Computing** Isabel Pedersen, Andrew Iliadis, 2020-03-24 Practitioners and scholars explore ethical, social, and conceptual issues arising in relation to such devices as fitness monitors, neural implants, and a toe-controlled computer mouse. Body-centered computing now goes beyond the “wearable” to encompass implants, bionic technology, and ingestible sensors—technologies that point to hybrid bodies and blurred boundaries between human, computer, and artificial intelligence platforms. Such technologies promise to reconfigure the relationship between bodies and their environment, enabling new kinds of physiological interfacing, embodiment, and productivity. Using the term embodied computing to describe these devices, this book offers essays by practitioners and scholars from a variety of disciplines that explore the accompanying ethical, social, and conceptual issues. The contributors examine technologies that range from fitness monitors to neural implants to a toe-controlled mouse. They discuss topics that include the policy implications of ingestibles; the invasive potential of body area networks, which transmit data from bodily devices to the internet; cyborg experiments, linking a human brain directly to a computer; the evolution of the ankle monitor and other intrusive electronic monitoring devices; fashiontech, which offers users an aura of “cool” in exchange for their data; and the “final frontier” of technosupremacism: technologies that seek to read our minds. Taken together, the essays show the

importance of considering embodied technologies in their social and political contexts rather than in isolated subjectivity or in purely quantitative terms. Contributors Roba Abbas, Andrew Iliadis, Gary Genosko, Suneel Jethani, Deborah Lupton, Katina Michael, M. G. Miniaturized Biosensing Devices Pranjal Chandra, Kuldeep Mahato, 2022-05-06 This book presents tools and techniques for the development of miniature biosensors and their applications. The initial chapters discuss the advancements in the development of the transduction techniques, including optical, electrochemical, and piezoelectric, which are used for miniaturized biosensors. The book also reviews several technologies, such as nanotechnology, nanobiotechnology, immune-technology, DNA-technology, micro-manufacturing technology, electronic-circuit technology to increase the miniaturization and sensitivity of the biosensor platform. Subsequently, the chapters illustrate the applications of miniaturized biosensing systems in point-of-care monitoring of treatment and disease progression, environmental monitoring, food control, drug discovery, forensics, and biomedical research. Towards the end, the book discusses the advanced applications of biosensors in water quality monitoring, especially on-line detection systems and on-site detection of pesticides, heavy metals and bacteria in water. This book is an invaluable source for scientists working in biochemical engineering,

bioengineering, and biomedical engineering in academia and industry.
