Multiword expressions at length and in depth Stella Markantonatou ,Carlos Ramisch , Agata Savary , Veronika Vincze , The annual workshop on multiword expressions takes place since 2001 in conjunction with major computational linguistics conferences and attracts the attention of an ever-growing community working on a variety of languages, linguistic phenomena and related computational processing issues. MWE 2017 took place in Valencia, Spain, and represented a vibrant panorama of the current research landscape on the computational treatment of multiword expressions, featuring many high-quality submissions. Furthermore, MWE 2017 included the first shared task on multilingual identification of verbal multiword expressions. The shared task, with extended communal work, has developed important multilingual resources and mobilised several research groups in computational linguistics worldwide. This book contains extended versions of selected papers from the workshop. Authors worked hard to include detailed explanations, broader and deeper analyses, and new exciting results, which were thoroughly reviewed by an internationally renowned committee. We hope that this distinctly joint effort will provide a meaningful and useful snapshot of the multilingual state of the art in multiword expressions modelling and processing, and will be a point point of reference for future work.

Multiword expressions Manfred Sailer ,Stella Markantonatou , Multiword expressions (MWEs) are a challenge for both the natural language applications and the linguistic theory because they often defy the application of the machinery developed for free combinations where the default is that the meaning of an utterance can be predicted from its structure. There is a rich body of primarily descriptive work on MWEs for many European languages but comparative work is little. The volume brings together MWE experts to explore the benefits of a multilingual perspective on MWEs. The ten contributions in this volume look at MWEs in Bulgarian, English, French, German, Maori, Modern Greek, Romanian, Serbian, and Spanish. They discuss prominent issues in MWE research such as classification of MWEs, their formal grammatical modeling, and the description of individual MWE types from the point of view of different theoretical frameworks, such as Dependency Grammar, Generative Grammar, Head-driven Phrase Structure Grammar, Lexical Functional Grammar, Lexicon Grammar.

Neuronal Cytoskeleton Hirokawa,1994-01-01 This book discusses the primary functions of microtubule-associated proteins (MAPs) such as MAP2 and tau in neuronal morphogenesis, as well as relationships between neuronal differentiation and the expression of neuronal intermediate filaments (nestin, alpha internexin, and neurofilament triplet proteins). It emphasizes the importance of several cytoskeletal proteins for neuronal differentiation and morphogenesis, organelle transport, and synaptic functions. The book considers the involvement of tau MAPs in the formation of paired helical filaments in Alzheimer's disease, and it examines the mechanisms of organelle transports and molecular motors such as kinesin, braindynein, and kinesin superfamily proteins. Cytoskeletal proteins involved in synaptic formation and transmitter release and new synaptic junctional-associated proteins are explored as well.

Visual Information Communication Mao Lin Huang,Quang Vinh Nguyen,Kang Zhang,2009-10-20 Visual communication through graphical and sign languages has long been conducted among human beings of different backgrounds and cultures, and in recent decades between human and machine. In today's digital world, visual information is typically encoded with various metaphors commonly used in daily life to facilitate rapid comprehension and easy analysis during the communication process. Visual information communication generally encompasses information visualization, graphical user-interfaces, visual analytics, visual languages and multi-media processing. It has been successfully employed in knowledge discovery, end-user programming, modeling, rapid systems prototyping, education, and design activities by people of many disciplines including architects, artists, children, engineers, and scientists. In addition, visual information is increasingly being used to facilitate human-human communication through the Internet and Web technology, and electronic mobile devices. This manuscript provides the cutting-edge techniques, approaches and the latest ongoing researches in the context of visual information communication. It is a collection of 24 chapters selected from more than 60 submissions to the VINCI'09 - 2009 Visual Information Communications International Conference, that is held in Sydney Australia, September 2009. These chapters were selected through a stringent review process to ensure their high standard in quality, significance and relevance. Each chapter was reviewed by at least two international Program Committee members of VINCI'09. The book covers a broad range of contents in five key sub-areas of visual information communication, including.

The Museum of Augustus Peter Heslin,2015-05-01 In the Odes, Horace writes of his own work, "I have built a monument more enduring than bronze,"—a striking metaphor that hints at how the poetry and built environment of ancient Rome are inextricably linked. This fascinating work of original scholarship makes the precise and detailed argument that painted illustrations of the Trojan War, both public and private, were a collective visual resource for selected works of Virgil, Horace, and Propertius. Carefully researched and skillfully reasoned, the author's claims are bold and innovative, offering a strong interpretation of the relationship between Roman visual culture and literature that will deepen modern readings of Augustan poets. The Museum of Augustus first provides a comprehensive reconstruction of paintings from the remaining fragments of the cycle of Trojan frescoes that once decorated the Temple of Apollo in Pompeii. It then finds the echoes of these paintings in the Augustan-dated Portico of Philippus, now destroyed, which was itself a renovation of Rome's de facto temple of the Muses—in other words, a museum, both in displaying art and offering a meeting place for poets. It next examines the responses of the Augustan poets to the decorative program of this monument that was intimately connected with their own literary aspirations. The book concludes by looking at the way Horace in the Odes and Virgil in the Georgics both conceptualized their poetic projects as temples to rival the museum of Augustus.

Haemostasis Paul Monagle,2013-04-02 The haemostatic system is one the most important physiological systems for maintaining health and well being, and thus the investigation of the haemostatic system remains a research priority. Disturbances of the haemostatic system in the broader sense, such as heart disease and strokes, arguably constitute the single greatest contribution to non-infectious mortality in the world today. Therefore, understanding the laboratory methods to assess the haemostatic system is vital for the practice of complex clinical medicine. In Haemostasis: Methods and Protocols, experts in the field address the major components of the haemostatic system, general principles of haemostatic testing, and techniques used to assess various aspects of the haemostatic system, grouped according to their functional indications. Written in the successful Methods in Molecular Biology™ series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Authoritative and easily accessible, Haemostasis: Methods and Protocols provides an ideal guide to scientists of all backgrounds and serves an urgent need for further

research to develop superior methods of assessing the haemostatic system in humans.
