**The Speeches in Vergil's Aeneid** Gilbert Highet,2015-03-08 In the Aeneid men, women, gods, and goddesses are characterized by the speeches assigned to them far more than by descriptions of their appearance or behavior. Most of the speeches are highly emotional and individualized, reminding us of the most powerful utterances of Greek tragedy. Gilbert Highet has analyzed all the speeches in the Aeneid, using statistical techniques as well as more traditional methods of scholarship. He has classified the speeches; identified their models in earlier Greek and Latin literature; analyzed their structure; and discussed their importance in the portrayal of character. He finds that Vergil used standard rhetorical devices with discretion, and that his models were poets rather than orators. Nevertheless, this study shows Vergil to have been a master dramatist as well as a great epic poet. Originally published in 1972. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Internet of Things and Inter-cooperative Computational Technologies for Collective Intelligence Nik Bessis,Fatos Xhafa,Dora Varvarigou,Richard Hill,Maozhen Li,2012-12-14 Over the past two decades, we have witnessed unprecedented innovations in the development of miniaturized electromechanical devices and low-power wireless communication making practical the embedding of networked computational devices into a rapidly widening range of material entities. This trend has enabled the coupling of physical objects and digital information into cyber-physical systems and it is widely expected to revolutionize the way resource computational consumption and provision will occur. Specifically, one of the core ingredients of this vision, the so-called Internet of Things (IoT), demands the provision of networked services to support interaction between conventional IT systems with both physical and artificial objects. In this way, IoT is seen as a combination of several emerging technologies, which enables the transformation of everyday objects into smart objects. It is also perceived as a paradigm that connects real world with digital world. The focus of this book is exactly on the novel collective and computational intelligence technologies that will be required to achieve this goal. While, one of the aims of this book is to discuss the progress made, it also prompts future directions on the utilization of inter-operable and cooperative next generation computational technologies, which supports the IoT approach, that being an advanced functioning towards an integrated collective intelligence approach for the benefit of various organizational settings.

**Bringing Fossils to Life** Donald R. Prothero,2013-11-05 One of the leading textbooks in its field, Bringing Fossils to Life applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla. It incorporates current research from biology, ecology, and population genetics, bridging the gap between purely theoretical paleobiological textbooks and those that describe only invertebrate paleobiology and that emphasize cataloguing live organisms instead of dead objects. For this third edition Donald R. Prothero has revised the art and research throughout, expanding the coverage of invertebrates and adding a discussion of new methodologies and a chapter on the origin and early evolution of life.

Transhumanism David Livingstone,2015-09-02 Transhumanism is a recent movement that extols man’s right to shape his own evolution, by maximizing the use of scientific technologies, to enhance human physical and intellectual potential. While the name is new, the idea has long been a popular theme of science fiction, featured in such films as 2001: A Space Odyssey, Blade Runner, the Terminator series, and more recently, The Matrix, Limitless, Her and Transcendence. However, as its adherents hint at in their own publications, transhumanism is an occult project, rooted in Rosicrucianism and Freemasonry, and derived from the Kabbalah, which asserts that humanity is evolving intellectually, towards a point in time when man will become God. Modeled on the medieval legend of the Golem and Frankenstein, they believe man will be able to create life itself, in the form of living machines, or artificial intelligence. Spearheaded by the Cybernetics Group, the project resulted in both the development of the modern computer and MK-Ultra, the CIA’s “mind-control” program. MK-Ultra promoted the “mind-expanding” potential of psychedelic drugs, to shape the counterculture of the 1960s, based on the notion that the shamans of ancient times used psychoactive substances, equated with the “apple” of the Tree of Knowledge. And, as revealed in the movie Lucy, through the use of “smart drugs,” and what transhumanists call “mind uploading,” man will be able to merge with the Internet, which is envisioned as the end-point of Kabbalistic evolution, the formation of a collective consciousness, or Global Brain. That awaited moment is what Ray Kurzweil, a director of engineering at Google, refers to as The Singularity. By accumulating the total of human knowledge, and providing access to every aspect of human activity, the Internet will supposedly achieve omniscience, becoming the “God” of occultism, or the Masonic All-Seeing Eye of the reverse side of the American dollar bill.
