*The Lives of the Sophists* Philostratus (the Athenian), 1921 PHILOSTRATUS AND EUNAPIUS. (a) Of the distinguished Lemnian family of Philostrati, Flavius Philostratus, 'the Athenian', was a Greek sophist (professor), c. A.D. 170-205, who studied at Athens and later lived in Rome. He was author of the admirable Life of Apollonius of Tyana (Loeb Nos. 16 and 17) and Lives of the Sophists (which are really impressions of investigators alert but less fond of scientific method and discovery than of stylish presentation or things known), one part concerning some older, the other some later 'proversors'.

Other extant works of this Philostratus are *Letters* and *Gymnasticus*, but the *Heroicus* or *Heroica* is apparently by another Philostratus, and the *Eikones* (Images, skilful descriptions of pictures, Loeb No. 256) were probably by two Philostrati, one being the son of Nervianus and born c. A.D. 190, the other his grandson who wrote c. AD. 300. (b) The Greek Sophist and historian Eunapius was born at Sardis in A.D. 347, but went to Athens to study and lived much of his life there teaching rhetoric and possibly medicine. He was initiated into the 'mysteries' and was hostile to Christians. Lost is his historical work (covering the years A.D. 270-404) but for excerpts and the use of it made by Zosimus, but we have his *Lives of Philosophers and Sophists* mainly contemporary with himself. Eunapius is our only source of our knowledge of Neo-Platonism in the latter part of the fourth century A.D.

Mental Models Indi Young, 2008-02-01 There is no single methodology for creating the perfect product—but you can increase your odds. One of the best ways is to understand users' reasons for doing things. *Mental Models* gives you the tools to help you grasp, and design for, those reasons. Adaptive Path co-founder Indi Young has written a roll-up-your-sleeves book for designers, managers, and anyone else interested in making design strategic, and successful.

**Metal Organic Frameworks as Heterogeneous Catalysts** Francesc X. Llabrés i Xamena, Jorge Gascon (Profesor), 2013-07-01 Catalysis has always been part of the development of mankind; from the fermentation of alcoholic drinks, through the development of fertilisers in the agricultural revolution and production of bulk chemicals in the 20th Century. Today, society demands improved production routes with greater product output and energy efficiency; the ultimate goal to achieving this would be having all catalytic reactions in concert, effectively functioning like a biological cell. Metal organic frameworks (MOFs) are a relatively new type of hybrid material. Their crystalline porous structure, built up from organic and inorganic building blocks, presents a vast array of composition, porosity and functionality offering enormous potential in catalytic systems. This book examines the latest research and discovery in the use of MOFs in catalysis, highlighting the extent to which these materials have been embraced by the community. Beyond presenting a digest of recent research by major players in the field, the book presents the strategies behind recent developments, providing a lasting reference for seasoned researchers and newcomers to the field.

*The Dance of the Islands* Christy Constantakopoulou, 2010-07-29 Christy Constantakopoulou examines the history of the Aegean islands and changing concepts of insularity, with particular emphasis on the fifth century BC. Islands are a prominent feature of the Aegean landscape, and this inevitably created a variety of different (and sometimes contradictory) perceptions of insularity in classical Greek thought. Geographic analysis of insularity emphasizes the interplay between island isolation and island interaction, but the predominance of islands in the Aegean sea made island isolation almost impossible. Rather, island connectivity was an important feature of the history of the Aegean and was expressed on many levels. Constantakopoulou investigates island interaction in two prominent areas, religion and imperial politics, examining both the religious networks located on islands in the ancient Greek world and the impact of imperial politics on the Aegean islands during the fifth century.

Proceedings of International Conference on Remote Sensing for Disaster Management Peddada Jagadeeswara Rao, Kakani Nageswara Rao, Sumiko Kubo, 2018-06-23 The natural disasters are the killer agents which can/can't be predicted even though we have modern technology. Every year, in one place or another, disasters striking which is devastating the area and surroundings, leading to ecological disruption besides huge loss of life and property. India is vulnerable to cyclones, landslides/avalanches, earthquakes, floods, droughts, forest fires, epidemics, etc. The 5700-km long coast of India, with its dense population is vulnerable to cyclones/low depressions, tsunamis, etc. The 2400-km long rugged Himalayan terrain is vulnerable to landslides, avalanches and earthquakes. India is not only vulnerable to natural disasters, it is also experiencing industrial accidents. The Bhopal Gas tragedy is one of the major man-made disasters in the world. The state of Andhra Pradesh has 970-km long coastline with two major rivers, etc. The conference is conducted in Visakhapatnam, is famous for industries and tourism. Recently, several industrial accidents took place, besides major natural disasters like Hud-Hud, etc. Disaster management shall be implemented from the grass root level in vulnerable areas to improve the capacity building, so as to minimize the losses. The capacity building coupled with technology results in reduction of loss of life and property.

**Environmental Geoinformatics** Joseph L. Awange, John B. Kyalo Kiema, 2013-06-13 There is no doubt that today, perhaps more than ever before, humanity faces a myriad of complex and demanding challenges. These include natural resource depletion and environmental degradation, food and water insecurity, energy shortages, diminishing biodiversity, increasing losses from natural disasters, and climate change with its associated potentially devastating consequences, such as rising sea levels. These human-induced and natural impacts on the environment need to be well understood in order to develop informed policies, decisions, and remedial measures to mitigate current and future negative impacts. To achieve this, continuous monitoring and management of the environment to acquire data that can be soundly and rigorously analyzed to provide information about its current state and changing patterns, and thereby allow predictions of possible future impacts, are essential. Developing pragmatic and sustainable solutions to address these and many other similar challenges requires the use of geodata and the application of geoinformatics. This book presents the concepts and applications of geoinformatics, a multidisciplinary field that has at its core different technologies that support the acquisition, analysis and visualization of geodata for environmental monitoring and management. We depart from the 4D to the 5D data paradigm, which defines geodata accurately, consistently, rapidly and completely, in order to be useful without any restrictions in space, time or scale to represent a truly global dimension of the digital Earth. The book also features the state-of-the-art discussion of Web-GIS. The concepts and applications of geoinformatics presented in this book will be of benefit to decision-makers across a wide range of fields, including those at environmental agencies, in the emergency services, public

health and epidemiology, crime mapping, environmental management agencies, tourist industry, market analysis and e-commerce, or mineral exploration, among many others. The title and subtitle of this textbook convey a distinct message. Monitoring -the passive part in the subtitle - refers to observation and data acquisition, whereas management - the active component - stands for operation and performance. The topic is our environment, which is intimately related to geoinformatics. The overall message is: all the mentioned elements do interact and must not be separated. Hans-Peter Bahr, Prof. Dr.-Ing. Dr.h.c., Karlsruhe Institute of Technology (KIT), Germany.

**Thomas Mann's The Magic Mountain** Rodney Symington, 2011-09-22 Thomas Mann's novel *The Magic Mountain* presents a panorama of European society in the first two decades of the 20th century and depicts the philosophical and metaphysical dilemmas facing people in the modern age. In the years leading up to the First World War, the fundamental elements of human nature were thrown into sharp relief by the political tensions that resulted in the ultimate metaphor for the innate destructiveness of humankind: the War itself. If such a war is the true expression of human tendencies, what hope is there for the future? Through the figure of the main character of the novel, Thomas Mann explores the alternative philosophies of life available to human beings in the modern age, and invites the reader to undertake a personal odyssey of discovery, with a view to adopting a positive approach in an era that seems to offer no clear-cut answers. This book is a comprehensive commentary on Thomas Mann's seminal novel, one of the key literary artefacts of the 20th century. The author has taken upon himself the task of explaining all the references and allusions contained in the novel, and of providing readers who know little or no German with enough explanatory comment to enable them to understand the novel and extract the maximum reading pleasure from it.

Plasma Catalysis Annemie Bogaerts,2019-04-02 Plasma catalysis is gaining increasing interest for various gas conversion applications, such as CO2 conversion into value-added chemicals and fuels, N2 fixation for the synthesis of NH3 or NOx, methane conversion into higher hydrocarbons or oxygenates. It is also widely used for air pollution control (e.g., VOC remediation). Plasma catalysis allows thermodynamically difficult reactions to proceed at ambient pressure and temperature, due to activation of the gas molecules by energetic electrons created in the plasma. However, plasma is very reactive but not selective, and thus a catalyst is needed to improve the selectivity. In spite of the growing interest in plasma catalysis, the underlying mechanisms of the (possible) synergy between plasma and catalyst are not yet fully understood. Indeed, plasma catalysis is quite complicated, as the plasma will affect the catalyst and vice versa. Moreover, due to the reactive plasma environment, the most suitable catalysts will probably be different from thermal catalysts. More research is needed to better understand the plasma–catalyst interactions, in order to further improve the applications.
