Imperial Japanese Navy Light Cruisers 1941-45 Mark Stille,2012-02-20 The Imperial Japanese Navy went to war with 17 light cruisers and another three cruiser-sized training ships. Of these, most were 5,500-ton ships designed to act as destroyer squadron flagships. This made them much different in capabilities and mission from their American counterparts. During the war, the Japanese built another five light cruisers, all but one of which maintained the design premise of being able to serve as destroyer squadron flagships. During the war, Japanese light cruisers were active throughout the Pacific performing many missions in addition to their flagship duties. Mark Stille continues Osprey's coverage of the IJN of WWII with this concise and complete study of all 25 ships, from their design and development to their ultimate fates. Detailed Osprey artwork and rare period photographs from the Fukui collection held in Kure, Japan illustrate this discussion.

Brassica Breeding and Biotechnology A. K. M. Mominul Islam,Mohammad Anwar Hossain,2021 The family Brassicaceae constitutes one of the world's most economically important plant groups. These plants are important sources of vegetable oil, vegetables, and condiments. Most of these crops belong to the genus Brassica, which includes common crops such as oilseeds (oilseed rape, mustard) and vegetables (broccoli, cauliflower, brussels sprouts, cabbage, turnip, Chinese cabbage, etc.). Brassica species play an essential role in horticulture and agriculture as well as contribute to the health of populations around the world. The current global climatic model predicts a significant decrease in growth, yield, and productivity of Brassica due to various biotic and abiotic stress factors. Thus, high-yielding, climate-resilient, and disease-resistant Brassica varieties are required to maintain as well as increase future agricultural production. The development of improved cultivars of these crops may become exhausted and improvement could become stagnant when plant breeding is merely based on a single breeding approach. Therefore, the goal of a breeding program should be to develop genetically superior Brassica cultivars suitable for a wide range of environments. This book examines the introgression of insect and disease resistance and other desirable traits into Brassica crops using inter-and/or intra-specific hybridization as well as biotechnological and molecular techniques, which could be useful for improving Brassica crops to ensure food security.

Biology of European Sea Bass F. Javier Sánchez Vázquez,José A. Muñoz-Cueto,2014-07-01 Biology of European Seabass presents up-to-date reviews on key topics of seabass biology, written by leading scientific experts with extensive knowledge of seabass as well as their respective field of expertise. The book covers the biology and ecology of the different sea basses and the latest findings in molecular biology, physiology, and behavior of this species. Ranging from larval development to nutrition to pathology and immune system, the chapters cover a broad spectrum. The final chapter deals with novel tools such as transcriptomics, proteomics, and metabolomics. The social and commercial impact (fisheries and aquaculture) of seabass is also assessed.

Bassett-Lowke Derek Head,2006-07-25 The nostalgia for the great passenger ships of the first half of the 20th century is vividly recalled in this book on the world famous model-making firm of Bassett-Lowke, with their production of small scale waterline ship models manufactured between 1908

Waterline Ship Models John Bowen,1972-01

Miniature Ship Models Paul Jacobs,2008-05-30 This book is the first comprehensive history of how the 1:1200 scale and its 1:1250 continental equivalent became accepted as the modern standard for miniature ship models. The origins can be traced back to the first years of the twentieth century and their use as identification aids by the military during the First World War, but when peace came the manufacturers aimed their increasingly sophisticated products at collectors, and acquiring, modifying or scratch-building miniature ship models has been an avidly pursued hobby ever since. This book charts the commercial rise and fall of the manufacturers, and the advancing technology that produces ever more detailed and accurate replicas. The author - himself a lifetime collector and builder of models - looks at the products of each manufacturer, past and present, rating their quality and suggesting why some are regarded as more collectible than others. But the book deals with more than off-the-shelf models, covering subsidiary issues like painting, modifying and diorama settings, and is illustrated throughout with many of the finest examples of the genre. The combination of fascinating background information with stunning visual presentation will make this book irresistible to any collector or enthusiast.

Elements of Mineralogy Richard Kirwan,1810

Naval Camouflage 1914-1945 David L. Williams,2001 Although it is a subject of immense importance to warship enthusiasts, modelmakers, photograph collectors, and indeed academic naval historians, there has never been an authoritative history of camouflage. Apart from the huge scale of the subject, the reason for this lies largely in the fragmented nature of the surviving evidence, and the ad hoc nature of much wartime development. This book does not claim to be such a narrative history, but it does set out to provide a comprehensive study. Visual and illustrative in its approach, it is Anglo-American in emphasis, but the camouflage patterns of enemy navies (and selected neutrals) are covered as well.

Miniature Merchant Ships John Bowen,1997 This practical guide to waterline ship modelling in 1/1200 scale contains 30 sets of plans for the reader to construct their own models.

More Miniature Merchant Ships John Bowen,2003 John Bowen brings his knowledge and expertise of waterline ship modelling to a second volume of miniature merchant ships, including examples such as Haverford (1901), Carpathia (1903), Oronsay (1925) and Braemar Castle (1952). The book opens with a section giving advice on initial preparations - finding and using plans, suitable materials and tools. This section also presents an alphabetical list of the principal fittings on a ship (those that would be included on this type of model) - hatches, winches, capstans, anchors, etc - with details and diagrams on how to make them. Section II comprises 30 sets of plans of ships built between 1900 and 1969. These are accompanied with at least one photograph of the ship, a full specification, brief history, and notes on essential constructional details, including colour scheme. Readers will recognise the authoritative yet approachable style John has brought to several ship modelling titles, which will appeal to both beginners and more experienced modellers. A companion volume to the highly successful Miniature Merchant Ships, More Miniature Merchant Ships includes 30 1/1200 scale plans of liners, cargo ships and passenger cargo ships, each supplied with comprehensive modelling notes.

More than 60 photographs of the prototype ships underway supply detailed pictorial references. This book, like *Miniature Merchant Ships*, is an essential addition to the library of any ship modeller. John Bowen is the author of several acclaimed titles for Conway Maritime Press, including *Miniature Merchant Ships*, published in 1997. Building waterline models has always been his favourite form of modelling and this book is a culmination of his continuing achievements in this area of ship modelling. John was deputy editor of Conway's quarterly journal *Model Shipwright* when it was launched in 1972 and has been its editor since 1974. He contributes a plan and instructions for a miniature merchant ship to each issue. John is a member of the Royal Institution of Naval Architects.

Time- and Strata-Bound Ore Deposits D.D. Klemm, H.-J. Schneider, 2012-12-06 The problem of time- and strata-bound formation of ore deposits has during the past decade become one of the most debated topics in current international discussion. Due to the amazing results of modern mineral exploration and world-wide geophysical research, the mutual relationship between the complex geological history of a crustal segment and the development of distinct metallogenic provinces (ore belts) has received much interest. Reviewing the earth's history in this light one can now recognize metallogenic epochs even of global range which document the existence of world-wide time-bound ore enrichments. The knowledge of these metallogenetic processes has been growing step by step for several decades. It began with simple observations and sceptic interpretations, which at first threw heretical spot lights on to the edifices of the prevailing theories on granitic differentiation as the favoured source of ore deposits. It was obvious that the new ideas at first referred to ore enrichments in sedimentary sequences, nowadays summarized under the term strata-bound, and mainly interpreted as stratiform or sedimentary ore deposits. Moreover, the modern term strata-bound also includes ore mineralizations which are bound to distinct units of layered (intrusive or extrusive) igneous complexes as a general descriptive term without genetical restriction! Albert Maucher is one of the representatives of the initial era who discussed these genetical questions critically in the decade before the 2nd World War.

A Catalogue of the Minerals of Tasmania Ralph Stephen Bottrill, William E. Baker, 2008 Catalogues of the minerals found in Tasmania have been kept since almost the earliest days of mining and have been of invaluable assistance to prospectors, mineral explorers, mineralogists and collectors. This catalogue was first published by the Tasmania Department of Mines in 1910, and was extensively revised in 1969. Since then the improvements in technology and further investigations of minerals and mineral deposits have not only increased the number of identified species and data on mineral occurrences, but have also invalidated many previous 'species'. This catalogue extensively updates the previous catalogue. A total of 753 minerals are described, comprising 483 confirmed species, 162 unconfirmed species, 72 variety or invalid names, and 36 series and group names. All entries in the 1969 catalogue have been re-evaluated and are now reclassified as to their known or likely validity. Species invalidated or doubted from the 1969 listing have been retained, with comments.
