  Proceedings of the 1990 International Conference on Parallel Processing
Benjamin W. Wah,David A. Padua,Pen-Chung Yew,Pennsylvania State
University,1990 The field of parallel processing is maturing into a strong,
diverse, and highly international area of study. For the 1990 conference, the
eighteenth to be held, over 500 papers were submitted by authors from 28
countries. These three volumes make available the 256 papers that were
accepted after a rigorous process of review. The overall variety and currency
of issues addressed by the collection will make these volumes of vital
interest to engineers, scientists, programmers, systems analysts, managers,
and other involved in the theory, design, and application of parallel
processing.

  Computer Vision-Based Agriculture Engineering Han Zhongzhi,2019-09-16 In recent years, computer vision is a fast-growing technique of agricultural engineering, especially in quality detection of agricultural products and food safety testing. It can provide objective, rapid, non-contact and non-destructive methods by extracting quantitative information from digital images. Significant scientific and technological advances have been made in quality inspection, classification and evaluation of a wide range of food and

agricultural products. Computer Vision-Based Agriculture Engineering focuses on these advances. The book contains 25 chapters covering computer vision, image processing, hyperspectral imaging and other related technologies in peanut aflatoxin, peanut and corn quality varieties, and carrot and potato quality, as well as pest and disease detection. Features: Discusses various detection methods in a variety of agricultural crops Each chapter includes materials and methods used, results and analysis, and discussion with conclusions Covers basic theory, technical methods and engineering cases Provides comprehensive coverage on methods of variety identification, quality detection and detection of key indicators of agricultural products safety Presents information on technology of artificial intelligence including deep learning and transfer learning Computer Vision-Based Agriculture Engineering is a summary of the author's work over the past 10 years. Professor Han has presented his most recent research results in all 25 chapters of this book. This unique work provides students, engineers and technologists working in research, development, and operations in agricultural engineering with critical, comprehensive and readily accessible information. It applies development of artificial intelligence theory and methods including depth learning and transfer learning to the field of agricultural engineering testing.

  Electrophysiological Methods William L. Nastuk,2013-10-22 Physical Techniques in Biological Research Volume VI: Electrophysiological Methods

presents the analytical methods and experimental techniques in electrophysiological research. It discusses the handling and analysis of information by computer methods. It addresses the methods of analysis of waveforms, signal characterization and detection. Some of the topics covered in the book are the fundamentals of digital and analog computers; analysis of complex waveforms; operational amplifiers; signal processing and parameter estimation; the core conductor model; voltage clamp techniques; cable theory; automatic computation equipment; and electric accounting machinery. The wave shape generation are covered. The characterization of systematic functions is discussed. The text describes the nerve containing axial wire. A study of the internal thin and outer diffuse electrodes is presented. A chapter is devoted to the simple one dimensional model. Another section focuses on the cylindrical model with radial symmetry and accuracy of membrane potential measurement. The book can provide useful information to experimenters, students, and researchers.
