Brain Games for Your Child Robert Fisher, 2011-09-01 Every child needs love and physical care, but also play that stimulates their thinking and helps boost their brain power. By playing with parents, grandparents and carers children can build their social and creative skills and get the mental stimulus that develops their brains. In Brain Games for Your Child Robert Fisher draws on his thirty years of research into children's thinking and learning to provide over 200 games to help children to build their thinking, number, language and social skills. From music and art games, treasure hunts and card games, word games and number battles there are games that can be played by all the family that will create bonds and build memories and help boost your child's brain power. Included are old favourites as well as new games, but what is common to all the games is interaction with other people, rather than with electronic screens, where communicating and playing with others provides the basis for developing the full range of a child's abilities. Brain Games for Your Child provides games to create a happy learning environment, encouraging educational skills through games that are fun. It provides a wealth of games to play with children of all abilities during the all-important first 10 years of life. This is an essential guide for raising a happier, brighter and more sociable child.

Writing Vietnam, Writing Life Tobey C. Herzog, 2009-05 Phillip Caputo, Larry Heinemann, Tim O'Brien, and Robert Olen Butler: four young midwestern Americans coming of age during the 1960s who faced a difficult personal decision—whether or not to fight in Vietnam. Each chose to participate. After coming home, these four veterans became prizewinning authors telling the war stories and life stories of soldiers and civilians. The four extended conversations included in Writing Vietnam, Writing Life feature revealing personal stories alongside candid assessments of each author's distinct roles as son, soldier, writer, and teacher of creative writing. As Tobey Herzog's thoughtful interviews reveal, these soldier-authors have diverse upbringings, values, interests, writing careers, life experiences, and literary voices. They hold wide-ranging views on, among other things, fatherhood, war, the military, religion, the creative process, the current state of the world, and the nature of both physical and moral courage. For each author, the conversation and richly annotated chronology provide an overview of the writer's life, the intersection of memory and imagination in his writing, and the path of his literary career. Together, these four life stories also offer mini-tableaux of the fascinating and troubling time of 1960s and 1970s America. Above all, the conversations reveal that each author is linked forever to the Vietnam War, the country of Vietnam, and its people.

They demonstrate the multidisciplinary approaches to study cognition in young children that include application of cognitive, neuroscience, and developmental paradigms in typically developing youngsters, as well as those affected by clinical conditions, such as traumatic brain injury, exposure to low levels of lead in the environment, and prematurity. Although much work remains to be done, these study results are illustrative of the dynamic work in this exciting development period.
