Kinetic Art: Theory and Practice Frank J. Malina, 1974

Drawing on the Air Tim Prentice, 2012-06-19 In the New York Times Michael Kimmelman called them sleek, whimsical contraptions in a modernist mode; the Basler Zeitung termed them net-like structures . . . like hedgehogs or serpents. The kinetic sculptures of Tim Prentice create a novel geometry of air and light. Concentrating on movement rather than object, Prentice harnesses natural elements into his art machines—delicate structures that walk the tightrope between order and chaos, control and serendipity, understated technique and extravagant wonder. Prentice purposely circumscribes the artist's prerogatives, distilling the power of wind and sun into an ever-changing dance of light and shadow. These understated, subtle inventions provide endless distraction, delighting the child in all of us. *Drawing on Air* offers a many-sided vision of the kinetic sculptor and his works. An essay by Nicholas Fox Weber introduces the artist and his work, while a chapter on Mechanics explains some of the physical principles underlying Prentice's whimsical sculptures. Photographs of works-in-progress, principal public commissions as well as occasional pieces created for casual amusement are punctuated by the artist's mordant, sometimes mischievous comments. Prentice's sculptures . . . are about fluid movement and change, reminding us that everything is in flux. . . . Wonders of engineering, they create evanescent drawings in thin air. -Michael Amy, *Art in America* What is grand in these sculptures is the sense of immensity created by their movements, a sense resonant with our most pleasurable apprehensions of land, sea, and sky. -Elaine Bleakney, *Sculpture* These refined sculptures are never ponderous, plump or boring but constantly and slowly transforming themselves as though imbued by perpetuum mobile. -Karen Gerig, *Basler Zeitung* Experiencing Tim Prentice's work is like taking a ride on a roller coaster -Catalog of the Connecticut Biennial

Keep It Moving? Rachel Rivenc, Reinhard Bek, 2018-03-13

Kinetic art not only includes movement but often depends on it to produce an intended effect and therefore fully realize its nature as art. It can take a multiplicity of forms and include a wide range of motion, from motorized and electrically driven movement to motion as the result of wind, light, or other sources of energy. Kinetic art emerged throughout the twentieth century and had its major developments in the 1950s and 1960s. Professionals responsible for conserving contemporary art are in the midst of rethinking the concept of authenticity and solving the dichotomy often felt between original materials and functionality of the work of art. The contrast is especially acute with kinetic art when a compromise between the two often seems impossible. Also to be considered are issues of technological obsolescence and the fact that an artist's chosen technology often carries with it strong sociological and historical information and meanings.

Oikonomopoulos, A. S. C. Rower, Alex J. Taylor, 2015-01-01 An

insightful new look at one of the 20th century's most celebrated artistic visionaries Alexander Calder (1898-1976) is one of modernism's most captivating and influential figures. First trained as a mechanical engineer, Calder relocated from New York to Paris in the mid-twenties where his acceptance into the city's burgeoning avant-garde circles coincided with the development of his characteristic form of kinetic sculpture. His early work *Cirque Calder*, which was presented throughout Paris to great acclaim, prefigures the performance and theatrical aspects that dominate Calder's pioneering artistic works and are situated as a primary subject of intrigue in this publication. Rather than simply refashion

sculpture's traditional forms, Calder envisioned entirely new possibilities for the medium and transformed its static nature into something dynamic and responsive. *Alexander Calder: Performing Sculpture* provides detailed insight into that pioneering process through reproductions of personal drawings and notes. Also featured is new research from a wide range of renowned scholars, furthering our understanding of the remarkable depth of Calder's beloved mobile sculptures and entrenching his status as an icon of modernism.

Kinetic Kompendium Dawn Thomas, 2018-01-11 Background: The Kinetic Grand Championship Sculpture Race is a 3-day, 42-mile human-powered race over land, sand, mud and water. Participants travel 50 miles from the Arcata plaza to Ferndale. It is widely considered the "Triathlon of the Art World" and occurs every Memorial Day weekend in Humboldt County, in Northern California. 2018 will be the 50th running of the race. Summary: *Kinetic Kompendium* investigates the fascinating 50-year history of this unique, annual 3-Day race. Most people know that the race was started by a friendly wager between Jack Mays and Hobart Brown, and escalated into an 11-sculpture race on Mother's Day, 1969, in Ferndale, CA. Since that first epic event, there have been thousands of people involved in the race. Over the years, racers, builders, artists and photographers have participated in the grueling all-terrain spectacle. This book weaves their stories and pictures together to create a comprehensive overview of the life of the race since its origins. The book is currently a 600 page, full-color book, containing essays, interviews, race results from all 50 years and newly unearthed photos, reproductions and ephemera from the race. This *Kompendium* is primarily a historical document that will preserve the rich history of the Kinetic Sculpture race in one source. The race has a tremendous economic, creative and emotional impact on the local community every year, and over the years most of the people in Humboldt county have been connected to it in one way or another.

Movement, Time, Technology, and Art Christina

Chau, 2017-06-12 This book explores the ways in which artists use technology to create different perceptions of time in art in order to reflect on contemporary relationships to technology. By considering the links between technology, movement and contemporary art, the book explores changing relationship between temporality in art, art history, media art theory, modernity, contemporary art, and digital art. This book challenges the dominant view that kinetic art is an antiquated artistic experiment and considers the changing perception of kinetic art by focusing on exhibitions and institutions that have recently challenged the notion of kinetic art as a marginalised and forgotten artistic experiment with mechanical media. This is achieved by deconstructing Frank Popper's argument that kinetic art is a precursor to subsequent explorations in the intersections between art, science and technology. Rather than pandering to the prevailing art historical assumption that kinetic sculpture is merely a precursor to art in a digital culture, the book proposes that perhaps kineticism succeeded too well, where movement has become a ubiquitous element of the aesthetic of contemporary art. If, as Boris Groys has recently suggested, installation has become the dominant mode of art in the contemporary age, then movement in real time with the viewer is used to aestheticise and explore the facets of our peculiar time.

Fletcher Benton, 2008 Fletcher Benton first received international recognition in his career as a kinetic artist bringing motion to his pieces with battery-powered motors. This book showcases some of Fletcher's work.

Kinesthesia Dan Cameron, 2017 This book examines pioneering Latin American kinetic artists who helped develop kinetic art into an international movement. *Kinesthesia: Latin American Kinetic Art, 1954-1969* examines the influential and visually stunning work of South American kinetic artists. While Southern California was becoming the North American epicenter for Light and Space art in the 1960s, separate yet closely related technical experiments had been unfolding in a handful of major cities of South America, as well as in Paris, the European center for kinetic art. *Kinesthesia* highlights the broad differences that emerged among the two principal South American centers of activity: Argentina, where kinetic art grew out of local debates about painting; and Venezuela, where pioneering notions of modern architecture stimulated a synthesis of art and design. Featured in this volume are kinetic sculptures and installations by Jesús Rafael Soto, Julio Le Parc, Carlos Cruz-Diez, Martha Boto, and others, as well as essays that explore the history of this movement, examine the artists' reception by European and American audiences in the context of the Cold War, and link their achievements to 21st-century artists and their work.

Calder: Small Sphere and Heavy Sphere A. S. C. Rower, Susan Braeuer Dam, Arnauld Pierre, Noam Milgrom Elcott, 2019 Gorgeous archival photos capture Calder's transformation of sculpture with his invention of the mobile. With multiple essays by renowned scholars, artwork and installation images, and a suite of historic photographs of Alexander Calder's (1898-1976) work taken by Marc Vaux in the 1930s, this catalog traces the breadth of Calder's innovative practice, leading up to his conception of the mobile in 1931--an unprecedented form of kinetic sculpture that radically altered the trajectory of modern art. Alexander Calder is one of the most acclaimed and influential sculptors of the 20th century. He is renowned for his invention of wire sculpture--coined by critics as drawings in space--and the mobile, a kinetic sculpture of suspended abstract elements whose actual movement creates

ever-changing compositions. Also included is a lively series of drawings Calder made at the Bronx and Central Park zoos of animals in motion, which recall his wire sculptures of the same subjects.

Kinetic Flying Sculptures Ondrej Mitas, 2018-05-13 This is a book of flying kinetic sculptures by Ondrej Mitas. These works are not models of things that fly, but rather models of flight itself. The book describes why and how they are made, how they fly, and the counterintuitive reactions they spark in people. Beautiful photos show the works in their full complexity and diversity. It is essential for any good collection of books about innovative 21st century artists, kinetic sculpture, aviation, or flight.

Four Essays on Kinetic Art Stephen Bann, 1966 In the past year important exhibitions of kinetic art have taken place in New York, Tel Aviv, Glasgow, and London. Yet despite the growing public interest there has been little published on the subject outside catalogues and ephemera. This new book presents the first comprehensive review of the field, with special emphasis on artists working in Paris, and including a historical survey of the use of movement in art. Kinetic art has been called 'the movement movement': but unlike many artistic movements confined to small national groups or based on particular sets of theoretical tenets, kinetic art is notable for its international 'membership' and for the catholicity of styles and aims, which it embraces. The authors of these four essays would prefer to see the term as describing a 'genre', like still-lives or landscape, in which the common factors are technical (the use of mechanical or illusory movement) rather than stylistic or of aesthetic principle.... Many historical examples are traced, in these four essays, of mobile works of not only from the immediate past--Calder, the 'kinetic sculpture' of Moholy-Nagy and the Constructivists, Bauhaus experiments and Duchamp's optical machines--but also from earlier dates--in particular the development of 'colour organs' and 'colour music'....The achievements of numerous artists are discussed in this book: of

Vardanega, Boto, Cruxent, Cruz-Diez, Soto, Takis, Tinguely, Calos, Dantu, Agam, and in particular detail Malina, Schöffer, Vasarely and the Groupe Recherche d'Art Visuel.--back cover.

Clearly illustrated guide to build a balanced kinetic sculpture, of birch plywood and stainless steel, that glides around slowly with the motion of ambient air in a room. · Clear instructions and material selection guide · Traceable full scale templates with matchlines · Examples of steaming and bending plywood · Illustrations of forming steel rod and balancing tips · Great project for individuals or parent & child teams · Educational, challenging, inspiring and fun to build This is a wonderful parent & child project or just to make it for yourself or as a gift. The hands-on experience of making the sculpture and understanding the physics in balancing it just right is rewarding in itself. Another reward is the finished product: A gliding conversation piece taking flight on the air.
