Transforming Type Barbara Brownie, 2014-12-18 Transforming Type examines kinetic or moving type in a range of fields including film credits, television idents, interactive poetry and motion graphics. As the screen increasingly imitates the properties of real-life environments, typographic sequences are able to present letters that are active and reactive. These environments invite new discussions about the difference between motion and change, global and local transformation, and the relationship between word and image. In this illuminating study, Barbara Brownie explores the ways in which letterforms transform on screen, and the consequences of such transformations. Drawing on examples including Kyle Cooper's title sequence design, kinetic poetry and MPC's idents for the UK's Channel 4, she differentiates motion from other kinds of kineticism, with particular emphasis on the transformation of letterforms into other forms and objects, through construction, parallax and metamorphosis. She proposes that each of these kinetic behaviours requires us to revisit existing assumptions about the nature of alphabetic forms and the spaces in which they are found.

Aesthetic Animism David Jhave Johnston, 2016-06-03 A poetics appropriate to the digital era that connects digital poetry to traditional poetry's concerns with being. This book offers a decoder for some of the new forms of poetry enabled by digital technology. Examining many of the strange technological vectors converging on language, it proposes a poetics appropriate to the digital era while connecting digital poetry to traditional poetry's concerns with being (a.k.a. ontological implications). Digital poetry, in this context, is not simply a descendent of the book. Digital poems are not necessarily "poems" or written by "poets"; they are found in ads, conceptual art, interactive displays, performative projects, games, or apps. Poetic tools include algorithms, browsers, social media, and data. Code blossoms into poetic objects and poetic proto-organisms. Introducing the terms TAVs (Textual-Audio-Visuals) and TAVITS (Textual-Audio-Visual-Interactive), Aesthetic Animism theorizes a relation between scientific method and literary analysis; considers the temporal implications of animation software; and links software studies to creative writing. Above all it introduces many examples of digital poetry within a playful yet considered flexible taxonomy. In the future imagined here, digital poets program, sculpt, and nourish immense immersive interfaces of semi-autonomous word ecosystems. Poetry, enhanced by code and animated by sensors, reengages themes active at the origin of poetry: animism, agency, consciousness. Digital poetry will be perceived as living, because it is living.

Layering of Size and Type Noun Constructions in English Lieselotte Brems, 2011-12-23 On the basis of synchronic and diachronic data analysis, the volume takes a close look at the synchronic layers of binominal size noun and type noun uses (a bunch/a load of X; a sort of X; a Y type of X) and reconsiders the framework of grammaticalization in view of issues raised by the phrases under discussion. As a result, a construction grammar-approach to grammaticalization is developed which does justice to the syntagmatic lexical, or collocational, reclustering observed in the data within an eclectic cognitive-functional approach.

Modern Perspectives in Type-Theoretical Semantics Stergios Chatzikyriakidis, Zhaohui Luo, 2017-02-07 This book is a collective volume that reports the state of the art in the applications of type theory to linguistic semantics. The volume fills a 20 year gap from the last published book on the issue and aspires to bring researchers closer to cutting edge alternatives in formal semantics research. It consists of unpublished work by some key researchers on various issues related to the type theoretical study of formal semantics and further exemplifies the advantages of using modern type theoretical approaches to linguistic semantics. Themes that are covered include modern developments of type theories in formal semantics, foundational issues in linguistic semantics like anaphora, modality and plurals, innovational interdisciplinary research like the introduction of probability theory to type theories as well as computational implementations of type theoretical approaches. This volume will be of great interest to formal semanticists that are looking for alternative ways to study linguistic semantics, but will also be of interest to theoretical computer scientists and mathematicians that are interested in the applications of type theory.

Treaties in Motion Malgosia Fitzmaurice, Panos Merkouris, 2020-06-25 The law of treaties is in constant motion, understood not only as locomotion, but also as motion through time and as change. Thus, kinesis and stasis, two sides of the same concept of 'motion', are the central themes of *Treaties in Motion*. The concept of motion adopted in this book is based on the philosophy of Aristotle. He identified six types of motion: creation (genesis), increase (auxesis), diminution (meiosis), alteration (alloiosis), destruction (phthora), and change of place (kata topon metabole), which has been amended by the authors to change in space-time (kata topon kai chronon metavole) to reflect our modern scientific understanding of time as a dimension through which motion and change occurs. Each chapter's analysis proceeds by focusing on a specific area of a treaty's 'life-cycle', where each type of motion shines through and is described through three different frames of reference: treaties, the Vienna Convention of the Law of Treaties, and customary law.

Life and Motion of Socio-Economic Units Andrew Frank, Jonathan Raper, J. P. Cheylan, 2003-09-02 One of the ongoing problems researchers in geography and GIS have is studying data that is inherently spatial over a long period of time. One of the main hurdles they have to overcome is the study of groups of people classified by their socio-economic status (one of the main means for governments, companies and research organisations to group together segments of the population). The amount of data collected by governments, business and research organisations has increased markedly in recent years. Geographic Information Systems have been more widely used than ever before for the storage and analysis of this information. Most GIS can handle this information spatially rather than temporally, and have difficulty with the management of socio-economic time series, which relate to spatial units. Accordingly, this book covers the issues ranging from the formal model to differentiate aspects of spatio-temporal data, through philosophical and fundamental reconsideration of time and space to the development of practical solutions to the problem. This book draws together an interdisciplinary group of scientists in the field of geography, computing, surveying and philosophy. It presents the definitive sourcebook on temporal GIS as applied to socio-economic units.

Bromhead Peter Bromhead, 2016-06-27 A wickedly funny illustrated memoir by award-winning cartoonist Peter Bromhead. One of New Zealand's best-known cartoonists, Peter Bromhead has led a colourful life. In his satirical illustrated memoir, *Bromhead*, as he is affectionately known, shares his life in words and pictures. Packed with hilarious illustrations recounting his harsh upbringing, romantic missteps, cartooning career and experiences as an older father, this is a heart-warming and seriously funny read.

The Teleology of Action in Plato's Republic Andrew Payne, 2017-10-13 In many discussions of ancient philosophy, teleology is acknowledged as an important theme. How do we act for a particular end or purpose? One common answer describes humans as acting with the intention of achieving a goal. A person selects particular actions with the thought that these actions will lead to that goal. Andrew Payne accepts that this is one good answer to our question but proposes that it is not the only one. In *Plato's Republic*, Socrates appeals to a different understanding of how humans act for the sake of ends as they live together in political communities and pursue knowledge. As they carry out activities that are necessary for human flourishing, their actions can produce unintended results that signal the full completion of human capacities. For example, performing the actions of a just individual can help promote the establishment of a just society as an unintended result. Such unintended results qualify as ends or purposes of human action. This volume fully explores this

functional teleology of action in Plato's Republic.

Aristotle: Selections Aristotle,1995-09-01 Selections seeks to provide an accurate and readable translation that will allow the reader to follow Aristotle's use of crucial technical terms and to grasp the details of his argument. Unlike anthologies that combine translations by many hands, this volume includes a fully integrated set of translations by a two-person team. The glossary--the most detailed in any edition--explains Aristotle's vocabulary and indicates the correspondences between Greek and English words. Brief notes supply alternative translations and elucidate difficult passages.

Database and Expert Systems Applications Dimitris Karagiannis,2013-11-11 The Database and Expert Systems Applications - DEXA - conferences are dedicated to providing an international forum for the presentation of applications in the database and expert systems field, for the exchange of ideas and experiences, and for defining requirements for the future systems in these fields. After the very promising DEXA 90 in Vienna, Austria, we hope to have successfully established with this year's DEXA 91 a stage where scientists from diverse fields interested in application-oriented research can present and discuss their work. This year there was a total of more than 250 submitted papers from 28 different countries, in all continents. Only 98 of the papers could be accepted. The collection of papers in these proceedings offers a cross-section of the issues facing the area of databases and expert systems, i.e., topics of basic research interest on one hand and questions occurring when developing applications on the other. Major credit for the success of the conference goes to all of our colleagues who submitted papers for consideration and to those who have organized and chaired the panel sessions. Many persons contributed numerous hours to organize this conference. The names of most of them will appear on the following pages. In particular we wish to thank the Organization Committee Chairmen Johann Gordes, A Min Tjoa, and Roland Wagner, who also helped establishing the program. Special thanks also go to Gabriella Wagner and Anke Ruckert. Dimitris Karagiannis General Conference Chairman Contents Conference Committee.

Creating Motion Graphics with After Effects Chris Meyer,Trish Meyer,2013-02-11 After Effects CS5.5 Update: /tv.adobe.com/show/after-effects-cs55-new-creative-techniques/ Chris and Trish Meyer have created a series of videos demonstrating how to use their favorite new and enhanced features in After Effects CS5.5. Virtually all of these videos use exercise files from Creating Motion Graphics with After Effects (5th Edition for CS5) as their starting point, extending the usefulness of this book for its owners. These videos may be viewed for free on AdobeTV. * 5th Edition of best-selling After Effects book by renowned authors Trish and Chris Meyer covers the important updates in After Effects CS4 and CS5 * Covers both essential and advanced techniques, from basic layer manipulation and animation through keying, motion tracking, and color management * The downloadable resources are packed with project files for version CS5, source materials, and nearly 200 pages of bonus chapters Trish and Chris Meyer share over 17 years of hard-earned, real-world film and video production experience inside this critically acclaimed text. More than a step-by-step review of the features in AE, readers will learn how the program thinks so that they can realize their own visions more quickly and efficiently. This full-color book is packed with tips, gotchas, and sage advice that will help users thrive no matter what projects they might encounter. Creating Motion Graphics 5th Edition has been thoroughly revised to reflect the new features introduced in both After Effects CS4 and CS5. New chapters cover the revolutionary new Roto Brush feature, as well as mocha and mocha shape. The 3D section has been expanded to include working with 3D effects such as Digieffects FreeForm plus workflows including Adobe Repoussé, Vanishing Point Exchange, and 3D model import using Adobe Photoshop Extended. The print version is also accompanied by downloadable resources that contain project files and source materials for all the techniques demonstrated in the book, as well as nearly

200 pages of bonus chapters on subjects such as expressions, scripting, and effects. Subjects include: Animation Techniques; Layer Management; Modes, Masks, and Mattes; Mastering 3D Space; Text Animation; Effects & Presets; Painting and Rotoscoping; Parenting, Nesting, and Collapsing; Color Management and Video Essentials; Motion Tracking and Keying; Working with Audio; Integrating with 3D Applications; Puppet Tools; Expressions; Exporting and Rendering; and much more.

Books in Motion Mireia Aragay, 2005 Books in Motion addresses the hybrid, interstitial field of film adaptation. The introductory essay integrates a retrospective survey of the development of adaptation studies with a forceful argument about their centrality to any history of culture--any discussion, that is, of the transformation and transmission of texts and meanings in and across cultures. The thirteen especially composed essays that follow, organised into four sections headed 'Paradoxes of Fidelity', 'Authors, Auteurs, Adaptation', 'Contexts, Intertexts, Adaptation' and 'Beyond Adaptation', variously illustrate that claim by problematising the notion of fidelity, highlighting the role played by adaptation in relation to changing concepts of authorship and auteurism, exploring the extent to which the intelligibility of film adaptations is dependent on contextual and intertextual factors, and making a claim for the need to transcend any narrowly-defined concept of adaptation in the study of adaptation. Discussion ranges from adaptations of established classics like *A Tale of Two Cities*, *Frankenstein*, *Henry V*, *Le temps retrouvé*, *Mansfield Park*, *Pride and Prejudice*, *'The Dead'* or *Wuthering Heights*, to contemporary (popular) texts/films like *Bridget Jones's Diary*, *Fools*, *The Governess*, *High Fidelity*, *The Hours*, *The Orchid Thief/Adaptation*, the work of Doris Dörrie, the first Harry Potter novel/film, or the adaptations made by Alfred Hitchcock, Stanley Kubrick and Walt Disney. This book will appeal to both a specialised readership and to those accessing the dynamic field of adaptation studies for the first time.
