Active Protective Coatings Anthony E. Hughes,Johannes M.C. Mol,Mikhail L. Zheludkevich,Rudolph G. Buchheit,2016-03-01 This book covers a broad range of materials science that has been brought to bear on providing solutions to the challenges of developing self-healing and protective coatings for a range of metals. The book has a strong emphasis on characterisation techniques, particularly new techniques that are beginning to be used in the coatings area. It features many contributions written by experts from various industrial sectors which examine the needs of the sectors and the state of the art. The development of self-healing and protective coatings has been an expanding field in recent years and applies a lot of new knowledge gained from other fields as well as other areas of materials science to the development of coatings. It has borrowed from fields such as the food and pharmaceutical industries who have used, polymer techniques, sol-gel science and colloidosome technology for a range encapsulation techniques. It has also borrowed from fields like hydrogen storage such as from the development of hierarchical and other materials based on organic templating as “nanocontainers” for the delivery of inhibitors. In materials science, recent developments in high throughput and other characterisation techniques, such as those available from synchrotrons, are being increasingly used for novel characterisation – one only needs to look at the application of these techniques in self healing polymers to gauge wealth of new information that has been gained from these techniques. This work is largely driven by the need to replace environmental pollutants and hazardous chemicals that represent risk to humans such as chromate inhibitors which are still used in some applications.

Biofuels for Aviation Christopher Chuck,2016-06-02 Biofuels for Aviation: Feedstocks, Technology and Implementation presents the issues surrounding the research and use of biofuels for aviation, such as policy, markets, certification and performance requirements, life cycle assessment, and the economic and technical barriers to their full implementation. Readers involved in bioenergy and aviation sectors—research, planning, or policy making activities—will benefit from this thorough overview. The aviation industry’s commitment to reducing GHG emissions along with increasing oil prices have sparked the need for renewable and affordable energy sources tailored to this sector’s very specific needs. As jet engines cannot be readily electrified, turning to biofuels is the most viable option. However, aviation is a type of transportation for which traditional biofuels, such as bioethanol and biodiesel, do not fulfill key fuel requirements. Therefore, different solutions to this situation are being researched and tested around the globe, which makes navigating this scenario particularly challenging. This book guides readers through this intricate subject, bringing them up to speed with its current status and future prospects both from the academic and the industry point of view. Science and technology chapters delve into the technical aspects of the currently tested and the most promising technology in development, as well as their respective feedstocks and the use of additives as a way of adapting them to meet certain specifications. Conversion processes such as hydrotreatment, synthetic biology, pyrolysis, hydrothermal liquefaction and Fisher-Tropsch are explored and their results are assessed for current and future viability. Presents the current status of biofuels for the aviation

sector, including technologies that are currently in use and the most promising future technologies, their production processes and viability Explains the requirements for certification and performance of aviation fuels and how that can be achieved by biofuels Explores the economic and policy issues, as well as life cycle assessment, a comparative techno-economic analysis of promising technologies and a roadmap to the future Explores conversion processes such as hydrotreatment, synthetic biology, pyrolysis, hydrothermal liquefaction and Fisher-Tropsch

Airspace Closure and Civil Aviation Steven D. Jaffe,2016-03-03 The impact to airlines from airspace closure can be as benign as a two minute extension on an arrival pattern, or as catastrophic as a shoot down from a surface-to-air missile, as the tragic loss of Malaysia Airlines Flight 17 over the Ukraine in July 2014 demonstrates. Airspace constraints come in a variety of forms, both man-made and physical, but all result in operational inefficiencies that erode the economic vitality of an airline. Understanding the root causes of these airspace restrictions, developing strategies for mitigating their impact, and anticipating future airspace closures, are critical for the efficient and safe operation of any airline. This book uniquely examines the technological, geographic, regulatory, and political aspects of airspace closure, with a focus on how airlines continue to adapt to overcome these challenges, providing readers with a framework for identifying issues and solutions in a systematic manner. Filled with historical references and contemporary anecdotes, this book serves both as a practical guide and strategic resource for airline managers navigating their 21st century. organizations around some of the lingering 20th century obstacles.

Moving Boxes by Air Peter S. Morrell,Thomas Klein,2018-10-08 Air cargo is a key element of the global supply chain. It allows outsourcing of manufacturing to other

countries and links production in both multinational and smaller enterprises. It has also been the most important driver of certain export industries in countries such as South Africa, Kenya and Chile. As a component of the air transport industry, air cargo makes the crucial difference between profit and loss on many long-haul routes. This second edition of *Moving Boxes by Air* offers a comprehensive and up-to-date guide to the business and practices of air cargo, with chapters dedicated to key issues such as current trends, market characteristics, regulation, airport terminal operations, pricing and revenues, and environmental impacts. The book illustrates the recent emphasis on mergers at the expense of alliances, which have not had the impact that they had on passenger operations. The section on security has been expanded to assess in more depth the threats to aircraft from terrorists, particularly in the lower cargo and passenger baggage compartments. Surcharges are examined and the book considers whether all airlines will follow the lead of some to do away with both fuel and security surcharges. The book concludes with a summary of the latest industry forecasts. Fully updated throughout, this edition is the definitive guide to air cargo for professionals within both the aviation and freight industries.

Airline Finance Peter S. Morrell,2021-06-09 Revised and updated in its fifth edition, this internationally renowned and respected book provides the essentials to understanding all areas of airline finance. Designed to address each of the distinct areas of financial management in an air transport industry context, it also shows how these fit together, while each chapter and topic – for example, aircraft leasing – provides a detailed resource that can also be consulted separately. Supported at each stage by practical airline examples and recent data, *Airline Finance* examines the financial trends and longer term prospects for the airline industry as a whole, contrasting the developments for the major regions and airlines together with critical discussion of key issues that affect the industry as a whole. Important techniques in financial analysis are applied to the airlines as well as their investors such as banks and other financial institutions. Thoroughly amended and updated throughout, and expanded with the addition of two new chapters, the fifth edition reflects the many developments that have affected the industry, such as the impacts of the banking and sovereign debt crises on the airline industry, signs of re-nationalisation of airlines that have emerged in Europe, and the substantial changes that have occurred in connection with rating agencies and LIBOR. New start-ups and bankruptcies are covered for the first time in a new chapter, joined by airline mergers and acquisitions (M&A), both playing a role in airline concentration. Reflecting their status as a permanent feature, fuel hedging and fuel surcharges now also have their own chapter. The medium- to long-term future in terms of further concentration and government intervention (or the lack of it) and a shift in aircraft financing towards capital markets are discussed in the final chapter. The book is written for employees of airlines, airports and their suppliers, and investment bank and other analysts. It is also popular for use by universities and in-house courses on air transport management, within both academia and industry.
