Planetary Influences Upon Plants Ernst Michael Kranich,1986-06 One of the fundamental concepts of biodynamic agriculture is how the sun, moon and planets work through calcium and silica in the growth of plants. Ernst Michael Kranich's book describes the growth patterns, leaf placements, and flower forms of different plant families and how they are clearly connected to the same rhythmical activity of specific planets. With this study, readers can enlarge their perceptions of nature. Many examples and drawings are included, illustrating the connections between the orbital paths of planets and the shapes found in particular plants.

Short ride in a fast machine Sandra Kranich,2015 Sandra Kranich's art pieces involve fireworks designed for a mural that, for only a brief moment, ignites into a spectacle of light, color and sound. This hardcover volume documents the fireworks and their aftermath, the powder that burns on the walls to create the work.

Thinking Beyond Darwin Ernst Michael Kranich,1999 Through the work of Charles Darwin, a great task was set before science--to progress from opinions about evolution to a science of evolution, and reveal the inner laws and driving forces at work in the development of the organic world. In *Thinking beyond Darwin*, Ernst-Michael Kranich focuses on a central problem of evolutionary science. He shows us a way, based on Goethe's botanical and zoological investigations, of seeing the coherence and inner dynamics of organisms. Using Goethe's concept of type as a key to vertebrate evolution, Kranich methodically lays the foundation for a science of evolution. He focuses on the central problem of evolutionary science: are there underlying principles that connect the many disparate facts? By applying Goethe's method consistently to evolutionary thinking, Kranich shows that the laws and driving forces of evolution are encompassed by the inner lawfulness of living organisms and that we must participate through formative thinking in the evolutionary processes. *Thinking beyond Darwin*, makes an important contribution to the development of more adequate concepts of evolution and arrives at clear insights about earlier animal forms and evolutionary laws that could have immense consequences for future evolutionary thinking.

Multilingual Discourse Production Svenja Kranich,Viktor Becher,Steffen Höder,Juliane House,2011-11-09 This volume presents discourse production in multilingual contexts as a specific type of language contact situation. Translation may be seen as the prototypical type of multilingual discourse production, other types would include parallel text production in different languages (e.g. for websites) or the production of versions more loosely connected with the source text. When divergent communicative norms and conventions come into contact in any of these types of text production, one may find that such conventions transcend established language boundaries, potentially leading to the emergence of new genres. This volume represents the first collection of papers that focus on the specific properties of language contact through multilingual discourse production. It brings together approaches by historical linguists, language contact researchers and translation scholars, thus presenting the topic in its full variety and providing valuable suggestions for further research in this emerging field of study.

Contrastive Pragmatics and Translation Svenja Kranich,2016-05-11 This book provides the first comprehensive account of English-German pragmatic contrasts in written discourse and their effects on English-German translations. The novel and multi-dimensional corpus-based studies of business communication and popular science writing presented in this book combine quantitative and qualitative approaches and focus on the use of evaluative adjectives and epistemic modal markers. They provide empirical evidence that English and German differ in systematic ways and that translations, while being adapted to target audience's preferences to a large extent, are clearly susceptible to source language interference when it comes to more fine-grained differences. The book discusses which general factors determine the degree of impact of source language features on translations and also comments on the possibility of source language influence on target language norms via translations. The book is of interest to researchers and students in a variety of fields, such as pragmatics, translation studies, genre analysis and stylistics.

Lost in Change Svenja Kranich,Tine Breban,2021-06-15 While research on language change has formulated robust empirical generalisations about processes and motivations underlying the emergence and spread of linguistic elements, their decline and loss is less well understood. So far a systematic investigation into the processes and motivations of decline and loss in language change is lacking. This book is a first step towards remedying this state of affairs. It brings together a varied set of empirical investigations into decline and loss, spanning morphology, syntax and the lexicon, in different languages. Their authors apply diverse methodologies and represent different theoretical approaches. On the basis of this broad span of studies, authors and editors propose generalisations related to decline and loss and assess similarities and differences with processes and motivations of emergence and spread. The book aims to inspire and provide hypotheses for further studies of decline and loss. It will appeal to historical linguists and others interested in language change.
