Bhutan Michael Hawley, Jr.,2004-01 BHUTAN is a smaller companion volume to the world's largest published book, the 5x7' photographic book called BHUTAN. This book opens to nearly three feet, and offers an eyeful of imagery from several expeditions across the legendary mountain kingdom. Teams from MIT and Friendly Planet traveled extensively with two young people, Choki Lhamo (age 14, a girl from Trongsa who aspires to be a doctor) and Gyelsey Loday (also 14, son of the head lama in far-off Phongmey). This book shares a bit of their beautiful corner of the world. Proceeds are largely tax-deductible and are donated to help Bhutan's schools and scholars.

Chasing Giants Zeb Hogan,Stefan Lovgren,2023-04-25 Join Zeb Hogan, host of the National Geographic television show Monster Fish, on the science adventure of a lifetime. On May 1, 2005, a Thai fisherman caught a truly monstrous Mekong giant catfish. At 646 pounds, it captured the world's attention, and with awe and wonder, it was deemed the largest freshwater fish on record. There was no denying its size, but when biologist and research associate professor Hogan saw a photo of the fish, he wondered if it really was the biggest in the world. To his surprise, no one had systematically sought to answer the question: Which of the giant freshwater species really

was the largest? Seeking to answer that question has brought Hogan face to face with massive arapaima and piranha in the Amazon, alligator gar in Texas, pigeon-eating wels catfish in France, stingrays in Cambodia, and the gnarled-toothed sawfish in Australia. Part of his scientific adventure has been captured on *Monster Fish*, and Hogan now tells the full story of his 25-year quest to understand the mysteries of some of the oldest, largest, most bizarre creatures on Earth. The fate of these giant fish motivates Hogan to understand the various species he studies. The megafish's numbers are dwindling, and the majority of them face extinction. In this book, he teams up with award-winning journalist Stefan Lovgren to tell, for the first time, the remarkable and troubling story of the world's largest freshwater fish. It is a story that stretches across the globe, chronicling a race against the clock to find and protect these ancient leviathans before they disappear forever. *Chasing Giants: In Search of the World's Largest Freshwater Fish* combines science, adventure, and wonder to provide insights into the key role the massive fish of our lakes and rivers play in our past, present, and future.

Characteristics of the 100 Largest Public Elementary and Secondary School Districts in the United States, 1991-92 John P. Sietsema,1994 This report provides basic descriptive information about the 100 largest school districts in the United States and its outlying areas. Almost one in four public school students in the country is served by one of these districts. Characteristics, which include average and median school size, pupil/teacher ratios, number of high school graduates, enrollment of special education students and minorities, and selected fiscal data, are presented in 10 basic tables. Preceding these are Tables A through C, which establish the context of education in these largest districts. Although these districts represent fewer than 1 percent of all school districts, they educate nearly 23 percent of students. Fifty of the 99 districts that report racial and ethnic

information have more than 50 percent minority enrollment. These 100 largest districts employ nearly 23 percent of the nation's public school teachers and account for more than 19 percent of all public high school graduates. Appendix A lists the nation's 500 largest districts with some basic data, while Appendix B lists them alphabetically. Appendixes C and D are representations of the data collection instruments used in the Common Core of Data surveys on which this report is based. One map locates the 100 largest districts. (SLD)

The Continuity and Discontinuity of the 250 Largest Enterprises in Germany Maximilian Lantelme, 2023-10-01 This book studies the long-term development of the 250 largest family and non-family enterprises in Germany between 1958 and 2018. In particular, the continuities and discontinuities of the companies' ownership structure, operations and solvency are examined. Historical methods are used to advance the understanding of the attributed long-term orientation of family firms in family business research. The collected data of the 250 largest enterprises of 1958 provide the most comprehensive historical overview of the industrial landscape of this period. The long-term analyses show that more than half of the companies fail and less than a quarter keeps their ownership structure in the observation period of 60 years. In this timeframe, family-owned businesses have relatively stable ownership

structures and superior survival rates compared to public companies although the latter experience higher growth rates. A listing of a family firm leads to the discontinuity of the family's majority ownership in the mid- to long-term. Furthermore, company types like foundation-owned enterprises and foreign subsidiaries show even higher survival rates. The book closes with practical implications based on the identified development patterns of the surviving and failed enterprises.

The Rise and Downfall of Germany's Largest Family and Non-Family Businesses Maximilian Lantelme, 2016-10-24 Maximilian Lantelme examines the historical growth and decline developments of large German family and non-family businesses between 1971 and 2011. Based on a sample of the 143 largest German companies in 1971 and in 2011, the author investigates the long-term development of each company and calculates compound annual growth rates (CAGR) to compare the developments of total sales and of the number of employees between the enterprises with the overall development of the German economy. Additionally, he presents the exit rates as well as the reasons for the downfalls of the different types of companies. The results show a superior development of family businesses especially compared to non-family businesses due to lower exit and higher growth rates. The strategic

implications are that family businesses should achieve a certain corridor of growth in the long-term to secure the company's existence over generations.

Wealth Creation in the World's Largest Mergers and Acquisitions B. Rajesh Kumar, 2018-11-29 This book highlights research-based case studies in order to analyze the wealth created in the world's largest mergers and acquisitions (M&A). This book encourages cross fertilization in theory building and applied research by examining the links between M&A and wealth creation. Each chapter covers a specific case and offers a focused clinical examination of the entire lifecycle of M&A for each mega deal, exploring all aspects of the process. The success of M&A are analyzed through two main research approaches: event studies and financial performance analyses. The event studies examine the abnormal returns to the shareholders in the period surrounding the merger announcement. The financial performance studies examine the reported financial results of acquirers before and after the acquisition to see whether financial performance has improved after merger. The relation between method of payment, premium paid and stock returns are examined. The chapters also discuss synergies of the deal-cost and revenue synergies. Mergers and acquisitions represent a major force in modern financial and economic environment. Whether in times of boom or bust, M&As have emerged as a compelling strategy for growth. The biggest companies of modern day have all taken form through a series of restructuring activities like multiple mergers. Acquisitions continue to remain as the quickest route

companies take to operate in new markets and to add new capabilities and resources. The cases covered in this book highlights high profile M&As and focuses on the wealth creation for shareholders of acquirer and target firms as a financial assessment of the merger's success. The book should be useful for finance professionals, corporate planners, strategists, and managers.

The Ecology of Scotland's Largest Lochs Peter S. Maitland, 2012-12-06

Scotland is fortunate in being very richly endowed with natural fresh waters in the form of numerous lochs and rivers. These constitute on the one hand an attractive feature of the landscape and on the other a major resource for industry and recreation. Thus there are about 3800 lochs over 4 ha in area and these form approximately 1.0% of the total surface area of Scotland. Comparable figures for England and Wales are 1700 lakes and 0.05% of the land surface, and in terms of volume. Loch Ness contains more water than all the lakes and reservoirs in England and Wales put together (Smith & Lyle 1979). Many of the Scottish lochs are large and clean and consequently are particularly valuable in resource terms. The decision as to which are actually the largest lochs is debatable, particularly when the main criteria of greatest surface area, length, volume and depth each gives a different water (Lochs Lomond, Awe, Ness and Morar respectively). These four then are certainly among the largest lochs in the country, but close to them in size

come several other large waters, among which is Loch Shiel- which is exceeded in length only by Lochs Awe, Ness and Lomond. These five very large lochs (Frontis piece) form the group of waters selected for the comparative studies described in this volume.
