**CO2 Laser Cutting** John Powell,2012-12-06 CO2 Laser Cutting explains and describes how engineering materials are cut using a CO2 laser. Information is given on the cutting of metals and non metals on a wide range of levels from practical advice and processing parameters to explanations of the physical and chemical reactions which take place in the cut zone. In an effort to make the book as readable and informative as possible the subject is treated in a descriptive rather than a mathematical way. The benefit of CO2 Laser Cutting is twofold as it gives practical advice to the operator and technical advice to the researchers or scientist.

*CO2 Laser Cutting* John Powell,1998-06 This second edition of CO2 Laser Cutting , examines, and in places updates, the whole subject of co2 laser cutting. As with the original, the style is conversational and readable, with mathematical treatments kept to a minimum to give it its uniquely accessible feel. The discussion covers the cutting of metals and non metals on a wide range of levels, from practical advice and processing parameters to explanations of the physical and chemical reactions which take place in the cut zone. Materials covered include steels, wood, ceramics, polymers and non-ferrous alloys, and the information is taken from an extensive range of experimental and commercial results. The cutting process is dealt with in two ways: Practically - for the hands-on operator. Technically - for the researcher or scientist. The user-friendly yet informative style makes this both a practical handbook and research textbook, and is invaluable to anyone concerned with laser cutting, from job shop machine operators to post graduate researchers.

Optimization of Operating Parameters of Laser Engraving for Surface Roughness Debashish Gogoi,2021-10-27 Master's Thesis from the year 2020 in the subject Engineering - Mechanical Engineering, grade: 7.69, , language: English, abstract: In today's production and manufacturing industries, the laser cutting method is the broadly used nonconventional, advanced, non-contact type machining process. It has various advantages in using to cut or engrave almost all kinds of materials. In this study the effect of laser engraving parameters on filter paper were quantified using a mathematical model. The main objective of this study was to assess the individual and interaction effect of the input parameters on the surface quality of engraved portion under the experimental conditions that were based on the experimental design. From the experiment it was found that the laser power has the significant effect on the surface roughness. The interaction effect of the speed and number of dots per inch created by nozzle of the laser engraving machine and the quadratic effect of speed also have a significant effect on the output surface quality. It is seen that the roughness increases with the increase in the laser power. Also, it was found that the combination of low laser power and mid engraving speed can results in the good surface quality. Similarly, combination of low speed and DPI results in the good surface quality. Accordingly, interaction effect of low power and high DPI results the better surface quality. The best optimal setting was at 8W of laser power, 205.895 mm/sec of engraving speed and 299.9 numbers of dots per inch, the roughness was found as 5.5693  $\mu\text{m}$  with the percentage error of 0.53%.
