Optimization of Operating Parameters of Laser Engraving for Surface Roughness Debashish Gogoi,2021-10-27 Master's Thesis from the year 2020 in the subject Engineering - Mechanical Engineering, grade: 7.69, , language: English, abstract: In today's production and manufacturing industries, the laser cutting method is the broadly used nonconventional, advanced, non-contact type machining process. It has various advantages in using to cut or engrave almost all kinds of materials. In this study the effect of laser engraving parameters on filter paper were quantified using a mathematical model. The main objective of this study was to assess the individual and interaction effect of the input parameters on the surface quality of engraved portion under the experimental conditions that were based on the experimental design. From the experiment it was found that the laser power has the significant effect on the surface roughness. The interaction effect of the speed and number of dots per inch created by nozzle of the laser engraving machine and the quadratic effect of speed also have a significant effect on the output surface quality. It is seen that the roughness increases with the increase in the laser power. Also, it was found that the combination of low laser power and mid engraving speed can results in the good surface quality. Similarly, combination of low speed and DPI results in the good surface quality. Accordingly, interaction effect of low power and high DPI results the better surface quality. The best optimal setting was at 8W of laser power, 205.895 mm/sec of engraving speed and 299.9 numbers of dots per inch, the roughness was found as 5.5693 μm with the percentage error of 0.53%.

Laser Modification of the Wettability Characteristics of Engineering Materials (Engineering Materials Series ERS Publication 3) Jonathan Lawrence,Li Li,2001 The techniques available to engineers for the modification of a material's wettability characteristics are invariably extremely complex and difficult to control. The use of lasers, however, has been shown to provide a clean, accurate, and versatile way of modifying and improving the wettability characteristics of a wide range of engineering materials. Lawrence and Li have amply demonstrated the practicability of employing different types of lasers to effect changes in the wettability characteristics of a number of engineering materials. Laser Modification of the Wettability Characteristics of Engineering Materials makes extensive and comparative studies of the behavior and properties of composite, ceramic, metallic, and polymeric materials. The final chapter, practical applications of the use of lasers in modifying material behavior, is particularly useful as it puts this cutting edge research in industrial context. The authors have extended the scope of their industrially based research to present a very useful, coherent source for engineers. This excellent volume will be of great value to all those engineers and materials technologists working in industry or research institutions interested in the latest developments of property manipulation. Tribologists, surface technologists, those concerned with protective coatings and bonding materials, as well as anyone interested in laser technology, opt-electronics, marking, and laser engraving will find Laser Modification a useful guide.

Laser - Surface Interactions Rashid A. Ganeev,2013-10-17 This book is about the interaction of laser radiation with various surfaces at variable parameters of radiation. As a basic principle of classification we chose the energetic or intensity level of interaction of laser radiation with the surfaces. These two characteristics of laser radiation are the most important parameters defining entire spectrum of the processes occurring on the surfaces during interaction with electromagnetic waves. This is a first book containing a whole spectrum of the laser-surface interactions distinguished by the ranges of used laser intensity. It combines the surface response starting from extremely weak laser intensities ($\sim 1 \text{ W cm}^{-2}$) up to the relativistic intensities ($\sim 10^{20} \text{ W cm}^{-2}$ and higher). The book provides the basic information about lasers and acquaints the reader with both common applications of laser-surface interactions (laser-related printers, scanners, barcode readers, discs, material processing, military, holography, medicine, etc) and unusual uses of the processes on the surfaces under the action of lasers (art conservation, rangefinders and velocimeters, space and earth explorations, surface engineering and ablation, and others). The scientific applications of laser-surfaces interactions (surface optical nonlinearities, surface enhanced Raman spectroscopy, surface nanostructuring, nanoripples and clusters formation, X-ray lasers and harmonic generation from the surfaces) are discussed from the point of view of the close relations between the properties of surface and matter, which is a cornerstone of most of studies of materials. The novelty of the approach developed in Laser - Surface Interactions is related with the interconnection of scientific studies with numerous applications of the laser-surface interactions separated in different chapters by the ranges of laser intensities. We present most recent achievements in this field. The book provides valuable information for different ranges of reader's preparedness to the laser-related topics (from unprepared readers, to students, engineers and researchers, professionals and academics).

Glowforge Graphic Images Steven Doornbos,2015-11-22 GLOWFORGE is the newest offering on the laser engraver/cutting scene and has recently introduced a market-friendly and market-friendly-pricing to match their offering. Under \$2,500.00 for the basic laser engraver/cutter is what you'll pay for this amazing desktop machine! Until the introduction of the Glowforge you'd have to pay over ten thousand dollars to get a laser machine that wouldn't do even half of what the new Glowforge will do for you. Because the Glowforge is so new the company has yet to offer an extended source of graphics which you can use without having to resize, redraw or figure out how to use with ease. They do however have a small catalog with a limited number of designs you can print out and use. With that in mind I have created a library of graphic images that are easy to use on the new Glowforge laser engraver/cutter. The designs vary from simple to complex but regardless of which one you chose the Glowforge will easily and quickly laser cut or engrave them with precision and speed. Use of these images are royalty free and you can use them however you chose. Simply scan into your printer the image from the book that you want to use, print it out and you're all set to go. One thing that I am fond of doing with these images is to print them to a clear sticky-backed paper and then simply pull away the design, adhere it to whatever material I've decided to use in the laser cutter/engraver and allow it to do what it is designed to do; engrave and cut beautiful designs with laser quality that you simply, until now, weren't able to do. Use the designs in this book and explore the wonderful world of laser cutting/engraving. If you're anything like me you'll spend hours exploring this new and exciting way to express yourself with this all new crafting, personal or even business related platform.

Lasers and Their Applications Phoenix Walsh, 2018-11-26 A laser is a device that emits light through a process of optical amplification based on the stimulated emission of electromagnetic radiation. The term *laser*; originated as an acronym for *light amplification by stimulated emission of radiation*;. Laser Applications provides a firm grounding in the fundamental concepts over governing the field on Optics. This reference book is useful for the students of B.E., B.Tech. and M.Tech., courses. The present book is an attempt to treat the subject of Laser as an introductory course. With recent major breakthroughs in ultrafast laser technology and femtosecond nonlinear spectroscopic techniques, Femtosecond Laser Spectroscopy is currently a burgeoning field in many branches of science, including physics, chemistry, biology, and materials science. Attempts have also been made to cover the frontline areas in the subject. The development of Laser and its various applications in Communications, Radiation, medicine, Holography etc., has been given due importance.

Chemical Processing with Lasers Dieter Bäuerle, 2013-03-09 Materials processing with lasers is a rapidly expanding field which is increasingly captivating the attention of scientists, engineers and manufacturers alike. The aspect of most interest to scientists is provided by the basic interaction mechanisms between the intense light of a laser and materials exposed to a chemically reactive or nonreactive surrounding medium. Engineers and manufacturers see in the laser a new tool which will not only make manufacturing cheaper, faster, cleaner and more accurate but which also opens up entirely new technologies and manufacturing methods that are simply not available using existing techniques. Actual and potential applications range from laser machining to laser-induced materials transformation, coating, patterning, etc. , opening up the prospect of exciting new processing methods for micromechanics, metallurgy, integrated optics, semiconductor manufacture and chemical engineering. This book concentrates on the new and interdisciplinary field of laser-induced chemical processing of materials. The technique permits maskless single-step deposition of thin films of metals, semiconductors or insulators with lateral dimensions ranging from a few tenths of a micrometer up to several centimeters. Moreover, materials removal or synthesis, or surface modifications, such as oxidation, nitridation, reduction, metallization and doping, are also possible within similar dimensions. This book is meant as an introduction. It attempts to cater for the very broad range of specific interests which different groups of readers will have, and this thinking underlies the way in which the material has been arranged.
