Optimization of Operating Parameters of Laser Engraving for Surface Roughness Debashish Gogoi,2021-10-27 Master's Thesis from the year 2020 in the subject Engineering - Mechanical Engineering, grade: 7.69, , language: English, abstract: In today's production and manufacturing industries, the laser cutting method is the broadly used nonconventional, advanced, non-contact type machining process. It has various advantages in using to cut or engrave almost all kinds of materials. In this study the effect of laser engraving parameters on filter paper were quantified using a mathematical model. The main objective of this study was to assess the individual and interaction effect of the input parameters on the surface quality of engraved portion under the experimental conditions that were based on the experimental design. From the experiment it was found that the laser power has the significant effect on the surface roughness. The interaction effect of the speed and number of dots per inch created by nozzle of the laser engraving machine and the quadratic effect of speed also have a significant effect on the output surface quality. It is seen that the roughness increases with the increase in the laser power. Also, it was found that the combination of low laser power and mid engraving speed can results in the good surface quality. Similarly, combination of low speed and DPI results in the good surface quality. Accordingly, interaction effect of low power and high DPI results the better surface quality. The best optimal setting was at 8W of laser power, 205.895 mm/sec of engraving speed and 299.9 numbers of dots per inch, the roughness was found as 5.5693 μm with the percentage error of 0.53%.

VET Boost: Towards a Theory of Professional Competencies ,2009-01-01 The themes of the different papers in this book are related to five major areas of research. First, the book presents the work on a large-scale assessment in vocational and occupational education and training. Reason was the work of Frank Achtenhagen and his colleagues on the preparation of a VET-PISA which started in 2004 which has now become more and more a concrete program. The contributions to this part of the book contain a project description and profound presentations and discussions of measurement and evaluation problems. It reflects also the work of Achtenhagen with respect to item response theory, measurement and testing. The second part of this book presents a unique endeavour of promoting VET research: The Swiss Federal Office for Professional Education and Technology (OPET) initiated a program of Leading Houses of VET which are dedicated to different important research topics. This program might serve as example for comparable approaches in other countries. The third part highlights central issues of research on learning processes, curriculum theory and the use of technology. Here the work of Achtenhagen on competence-profile modelling, competence measurement and instructional and curriculum designing is touched. The fourth part stresses social and emotional learning as important aspects of VET learning. The fifth part considers the political and institutional dimensions of VET research which have to be taken into account when an international large-scale assessment of VET shall be getting started. Achtenhagen's work on learning at work, leaning in economics and learning under the conditions of institutional modelling are discussed. The whole book is a collection of central issues around a field that is not yet taken enough into consideration in educational research, but pushed and supported by Frank Achtenhagen: VET research. He belongs to the founding fathers of it, and this is why precisely the book reflects new trends and new concepts with respect to the question "What can we, educational psychologists and educational researchers, learn from a rich and central research field."

Southern Splendor Marc R. Matrana,Robin S. Lattimore,Michael W. Kitchens,2018-03-22 Few things evoke thoughts and memories of the past more than a house from a bygone era, and few places are identified and symbolized more by historic dwellings than the American South. Plantation houses built with columned porticos and wide porches, stout chimneys, large rooms, and sweeping staircases survive as legacies of both a storied and troubled past. These homes are at the heart of a complex web of human relationships that have shaped the social and cultural heritage of the region for generations. Despite their commanding appearance, the region's plantation houses have proven to be fragile relics of history, vulnerable to decay, neglect, and loss. Today, only a small percentage of the South's antebellum treasures survive. In Southern Splendor: Saving Architectural Treasures of the Old South, historians Marc R. Matrana, Robin S. Lattimore, and Michael W. Kitchens explore almost fifty houses built before the Civil War that have been authentically restored or preserved. Methodically examined are restoration efforts that preserve not only homes and other structures, but also the stories of those living in or occupying those homes. The authors discuss the challenges facing specific plantation homes and their preservation. Featuring over 275 stunning photographs, as well as dozens of firsthand accounts and interviews with those involved in the preservation of these historic properties, Southern Splendor describes the leading role the South has played, since the nineteenth century, in the historic preservation movement in this country.
