Handbook of Research on Cybersecurity Risk in Contemporary Business Systems
Adedoyin, Festus Fatai, Christiansen, Bryan, 2023-03-27 The field of cybersecurity is becoming increasingly important due to the continuously expanding reliance on computer systems, the internet, wireless network standards such as Bluetooth and wi-fi, and the growth of smart devices, including smartphones, televisions, and the various devices that constitute the internet of things (IoT). Cybersecurity is also one of the significant challenges in the contemporary world, due to its complexity, both in terms of political usage and technology. The Handbook of Research on Cybersecurity Risk in Contemporary Business Systems examines current risks involved in the cybersecurity of various business systems today from a global perspective and investigates critical business systems. Covering key topics such as artificial intelligence, hacking, and software, this reference work is ideal for computer scientists, industry professionals, policymakers, researchers, academicians, scholars, instructors, and students.

Wastelanding Traci Brynne Voyles, 2015-05-15 Wastelanding tells the history of the uranium industry on Navajo land in the U.S. Southwest, asking why certain landscapes and the peoples who inhabit them come to be targeted for disproportionate exposure to environmental harm. Uranium mines and mills on the Navajo Nation land have long supplied U.S. nuclear weapons and energy programs. By 1942, mines on the reservation were the main source of uranium for the top-secret Manhattan Project. Today, the Navajo Nation is home to more than a thousand abandoned uranium sites. Radiation-related diseases are endemic, claiming the health and lives of former miners and nonminers alike. Traci Brynne Voyles argues that the presence of uranium mining on Diné (Navajo) land constitutes a clear case of environmental racism. Looking at discursive constructions of landscapes, she explores how environmental racism develops over time. For Voyles, the “wasteland,” where toxic materials are excavated, exploited, and dumped, is both a racial and a spatial signifier that renders an environment and the bodies that inhabit it pollutable. Because environmental inequality is inherent in the way industrialism operates, the wasteland is the “other” through which modern industrialism is established. In examining the history of wastelanding in Navajo country, Voyles provides “an environmental justice history” of uranium mining, revealing how just as “civilization” has been defined on and through “savagery,” environmental privilege is produced by portraying other

landscapes as marginal, worthless, and pollutable.

New Media - New Teaching Options?! Gabriele Linke, 2006 Time and again throughout the second half of the 20th century, technical innovations in communications have promised more efficient ways of foreign language teaching and learning. Time and again, these media have been resisted by some teachers and welcomed enthusiastically by others, until each medium's specific strengths emerged more clearly in the course of classroom use. Contributors to this volume report their experiences, submit proposals and survey the state of affairs with regard to the use of 'new' electronic media in secondary and tertiary education. Some contributions cover more traditional media genres such as film, soap opera and music video clip while others - the majority - deal with the diverse uses of the Internet as a source of information and means of communication. Here, themes range from intercultural learning via Internet and virtual intercultural projects through the description of the development of programmes for information literacy and online courses to classroom uses of electronic newspapers, electronic platforms and scenario presentations with the help of new media.

Unlikely Alliances Zoltán Grossman, 2017-06-20 Often when Native nations assert their treaty rights and sovereignty, they are confronted with a backlash from their neighbors, who are fearful of losing control of the natural resources. Yet, when both groups are faced with an outside threat to their common environment—such as mines, dams, or an oil pipeline—these

communities have unexpectedly joined together to protect the resources. Some regions of the United States with the most intense conflicts were transformed into areas with the deepest cooperation between tribes and local farmers, ranchers, and fishers to defend sacred land and water. *Unlikely Alliances* explores this evolution from conflict to cooperation through place-based case studies in the Pacific Northwest, Great Basin, Northern Plains, and Great Lakes regions during the 1970s through the 2010s. These case studies suggest that a deep love of place can begin to overcome even the bitterest divides.
