

Light Box

Mark Goodman

Light Boxes Shane Jones, 2010-05-25 A poignant and fantastical first novel by a timeless new literary voice. With all the elements of a classic fable, vivid descriptions, and a wholly unique style, this idiosyncratic debut introduces a new and exciting voice to readers of such authors as George Saunders, Kurt Vonnegut, and Yann Martel. In *Light Boxes*, the inhabitants of one closely-knit town are experiencing perpetual February. It turns out that a god-like spirit who lives in the sky, named February, is punishing the town for flying, and bans flight of all kind, including hot air balloons and even children's kites. It's February who makes the sun nothing but a faint memory, who blankets the ground with snow, who freezes the rivers and the lakes. As endless February continues, children go missing and more and more adults become nearly catatonic with depression. But others find the strength to fight back, waging war on February.

Mammographic Image Analysis Ralph Highnam, Michael Brady, 1999 The key contribution of the approach to x-ray mammographic image analysis developed in this monograph is a representation of the non-fatty compressed breast tissue that we show can be derived from a single mammogram. The importance of the representation, called hint, is that it removes all those changes in the image that are due only to the particular imaging conditions (for example, the film speed or exposure time), leaving just the non-fatty 'interesting' tissue. Normalising images in this way enables them to be enhanced and matched, and regions in them to be classified more reliably, because unnecessary, distracting variations have been eliminated. Part I of the monograph develops a model-based approach to x-ray mammography, Part II shows how it can be put to work successfully on a range of clinically-important tasks, while Part III develops a model and exploits it for contrast-enhanced MRI mammography. The final chapter points the way forward in a number of promising areas of research.
