From Blue Moons To Black Holes Melanie Melton Knocke,2011-10-28 As this engrossing popular astronomy book makes clear, readers don't need a degree in astrophysics to explore the vast reaches of outer space. This generously illustrated volume includes a color insert containing, among other pictures, beautiful images of Saturn from the Cassini spacecraft.

Alien Earths Dr. Lisa Kaltenegger,2024-04-16 In the grand tradition of Carl Sagan and Neil deGrasse Tyson, we now have a new tour guide to the cosmos.—Charles Cockell, Professor of Astrobiology, University of Edinburgh Absorbing, informative, and entertaining.—Kirkus (starred) Riveting and timely, a look at the research that is transforming our understanding of the cosmos in the quest to discover whether we are alone. For thousands of years, humans have wondered whether we're alone in the cosmos. Now, for the first time, we have the technology to investigate. But once you look for life elsewhere, you realize it is not so simple. How do you find it over cosmic distances? What actually is life? As founding director of Cornell University's Carl Sagan Institute, astrophysicist Lisa Kaltenegger has built a team of tenacious scientists from many disciplines to create a specialized toolkit to find life on faraway worlds. In Alien Earths, she demonstrates how we can use our homeworld as a Rosetta Stone, creatively analyzing Earth's history and its astonishing biosphere to inform this search. With infectious enthusiasm, she takes us on an eye-opening journey to the most unusual exoplanets that have shaken our worldview - planets covered in oceans of lava, lonely wanderers lost in space, and others with more than one sun in their sky! And the best contenders for Alien Earths. We also see the imagined worlds of science fiction and how close they come to reality. With the James Webb Space Telescope and Dr. Kaltenegger's pioneering work, she shows that we live in an incredible new epoch of exploration. As our witty and knowledgeable tour guide, Dr. Kaltenegger shows how we discover not merely new continents, like the explorers of old, but whole new worlds circling other stars and how we could spot life there. Worlds from where aliens may even be gazing back at us. What if we're not alone?

The Planet Killers Robert Silverberg,2015-07-28 This trio of early short novels by Grand Master Robert Silverberg is straight-up pulp science fiction at its finest As a young man, Robert Silverberg was a science fiction prodigy, turning out top-flight stories in the blink of an eye. Though written quickly, Silverberg's early prose already showed evidence of the literary and imaginative qualities that would make him a giant in the field. Here are three of his best early works. In The Planet Killers, after Earth's supercomputer calculates that the inhabitants of the planet Lurion will destroy Earth in sixty-seven years, Roy Gardner is sent to stop them—by any means necessary. In The Plot Against Earth, Special Investigator Lloyd Catton's efforts to crack a ring of "hypnojewel" traffickers uncovers a galaxy-wide conspiracy. And in One of Our Asteroids Is Missing, when miner John Storm stakes claim to an asteroid with a king's ransom of rare minerals, he's set for life—or would be, if his discovery didn't also mark him for death.

Giant Planets of Our Solar System Patrick Irwin,2006-08-29 This book reviews the current state of knowledge of the atmospheres of the four giant gaseous planets. It is the first book to contain all the latest data and background information on these planets in one handy volume. Current theories of their formation are reviewed. The book clearly explains all specialist terms, and it discusses the pros and cons of ground versus space-based observations of giant planets.

The Big Little Golden Book of Planets Robert A. Bell,1987 Describes the nine planets of the solar system, their atmospheres, physical attributes, and moons.

Discovering Mars William Sheehan,Jim Bell,2021-11-09 For millenia humans have considered Mars the most fascinating planet in our solar system. We've watched this Earth-like world first with the naked eye, then using telescopes, and, most recently, through robotic orbiters and landers and rovers on the surface. Historian William Sheehan and astronomer and planetary scientist Jim Bell combine their talents to tell a unique story of what we've learned by studying Mars through evolving technologies. What the eye sees as a mysterious red dot wandering through the sky becomes a blurry mirage of apparent seas, continents, and canals as viewed through Earth-based telescopes. Beginning with the Mariner and Viking missions of the 1960s and 1970s, space-based instruments and monitoring systems have flooded scientists with data on Mars's meteorology and geology, and have even sought evidence of possible existence of life-forms on or beneath the surface. This knowledge has transformed our perception of the Red Planet and has provided clues for better understanding our own blue world. Discovering Mars vividly conveys the way our understanding of this other planet has grown from earliest times to the present. The story is epic in scope—an Iliad or Odyssey for our time, at least so far largely without the folly, greed, lust, and tragedy of those ancient stories. Instead, the narrative of our quest for the Red Planet has showcased some of our species' most hopeful attributes: curiosity, cooperation, exploration, and the restless drive to understand our place in the larger universe. Sheehan and Bell have written an ambitious first draft of that narrative even as the latest chapters continue to be added both by researchers on Earth and our robotic emissaries on and around Mars, including the latest: the Perseverance rover and its Ingenuity helicopter drone, which set down in Mars's Jezero Crater in February 2021.

A Down to Earth Guide to the Cosmos Mark Thompson,2013-01-17 To the beginner, the star-filled night sky can seem mysterious and unfathomable. But with this book as a guide the awesome nature of the Cosmos is brought down to Earth. The Human Planet Shannon M. Oglesby,2009-09 My book titled Alzheimer's Unmasked is the culmination of over 7 years of self-funded, full-time research that started in 1998. The initial goal was to identify what causes the neurodegenerative disease known as Alzheimer's dementia. What advances this disease from mild cognitive impairment, to moderate cognitive impairment, and finally to the end stage of severe cognitive impairment, which terminates in death. Alzheimer's dementia completely destroyed my mother's cognitive functions over a 10 year period of time. She died in May of 1999. My research was unproductive until this disease started to affect me. Using a 3 year process of elimination diet and testing on myself, I was able to isolate what caused my Cognitive impairment. It took a couple more years of research before I was able to understand the mechanisms involved. Trace minerals, by themselves will not reverse Alzheimer's, but, I have found that by using them in conjunction with a restricted diet that removes certain chemicals in the foods I eat, I have completely restored my cognitive functions back to normal. If you are looking for answers as to what causes this Alzheimer's disease and what to do about it, you will want to read Alzheimer's Unmasked.

The Lost Planet AQEEL AHMED, 2024-02-25 To sum up: In this epic story of exploration and adventure, a group of brave astronauts are sent on a journey unlike any other: they need to find the Lost Planet, a strange place that only shows up once every hundred years. This story takes us on an exciting trip through space, where there are endless things to discover, and the unknown is waiting to be explored. The astronauts are driven by their desire to learn and their determination, and they carefully plan their trip. They get ready for the challenges ahead by checking every system on their spaceship, getting the goods they need, and looking at star maps. As soon as they leave Earth, they start a wonderful trip into space, full of adventure and chances to find new things. The astronauts have to deal with many issues on their journey through space. For example, they have to get through a dangerous space storm that tests their teamwork and determination, and they also have to figure out the hints hidden in a strange chart that will help them get closer to their goal. When they meet nice aliens who give them useful information about the Lost Planet, it makes them even more determined to succeed. A huge field of asteroids that they can only cross with all of their skill and smarts is the hardest thing they have to do. The astronauts are confused and downcast because the Lost Planet disappears just as they are about to get close to it. Not scared, they do what their alien friends tell them to do and find a secret key hidden inside their spaceship. This key holds the key to finding the Lost Planet, even though it can't be seen. When the Lost Planet finally shows up, it's even more amazing and full of wonders than anyone could have dreamed. The secret key can be used to open it. The astronauts are amazed by everything they see as they travel through the bright scenery and meet strange and beautiful animals. After successfully completing their task, they return home full of new information and interesting stories to share with everyone around the world. The story of Lost Planet is more than just a journey; it shows how strong people can be, how well they can work together, and how much they love exploring. The mission of the astronauts shows that we can solve any problem and find out about the wonders of the universe if we are curious and work together. The Lost Planet used to be just a story, but now it stands for what can happen when we're brave enough to go into the unknown with each other.

Chapter 1: The Great Mission A wonderful trip through a universe full of secrets and wonders was about to start. There was nothing ordinary about this trip; it was a fantastic mission that interested everyone, from the tiniest child to the oldest adult. Astronauts who are brave and interested were picked for a trip unlike any other. They had to find and study a strange world that was only known as the Lost Planet. This planet was different from all the others; it was a jewel in the universe that only showed itself once every thousand years. It was time for it to show up. Stories about the Lost Planet were full of wonder and mystery. Legends talk about its amazing beauty, hidden mysteries, and huge promise. People said it was a place where the stars sang, and the sky danced in strange colors. There were many hopes and goals for the astronauts, but they were more than just explorers. They were chosen to connect what was known and what was unknown. Their goal was to find this mysterious planet, figure out what it was all about, and come back with information that could change the course of history. As they got ready for their trip, the astronauts were clearly very excited. They called on their bravery, interest, and desire to try new things. They carefully checked their spaceship to make sure that all of its systems worked and that all of its bolts were tight. They brought tools and equipment to help them study on the Lost Planet along with things they would need to stay alive. Under the calm light, maps of the stars were spread out and looked at, showing how they moved through space. But there was more to this task than just looking around. It showed how deeply their culture valued the quest for new knowledge. It reminded me that there were secrets all around me waiting to be solved, and that I needed to be brave and interested to find them. The astronauts knew there were risks: the trip would be hard and take a long time, and anything could happen in space. They just couldn't stay away from the draw of finding the Lost Planet and its secrets. Everyone in the world was waiting with bated breath for the day of departure. They said goodbye to Earth with a wave from their sleek and sturdy spaceship. With a roar that made everyone happy, the rocket took off, leaving a path of hope and fire behind it. A new era in the history of their world starts with the start of the trip to the Lost Planet. This chapter is full of the desire to explore, the thrill of adventure, and the strong bond of friendship. The universe was ready to share its ancient secrets with anyone who was brave enough to look for them, and the journey had started.

Chapter 2: Getting Ready for the Trip As the huge search for the Lost Planet began, the astronauts promised to carefully prepare. They knew that their trip through the vastness of space would take not only bravery but also careful planning and organization. Each person on the team had a specific job to do, and they all fit together like jigsaw puzzle parts, making the whole picture better. Because they respected each other and worked together, their plans were a symphony of hard work and dedication. The spaceship, which would be their home and guardian in the unknown parts of space, was the most important thing to them. They looked at every part of it, from the strong engines that would take them into space to the systems that would keep them alive so they could breathe, eat, and sleep while they were millions of kilometers from Earth. They tried the technology for communication to make sure they could stay in touch with their home base, tell people about what they were finding, and get helpful advice. It became clear to the astronauts that their spaceship was more than just a way to get from one place to another; it was a reliable travel companion. It was like putting together a difficult puzzle when I was packing supplies. They needed healthy food that would last a long time, clean water that could be used again and again, and medical goods in case they needed them suddenly. Of course, they also brought tools for fixing the spaceship and exploring the Lost Planet. Each item was carefully chosen and checked to make sure that nothing important was taking up valuable room and nothing unnecessary was left behind. Studying star maps was probably the most exciting thing they did to get ready. They used these plans to find their way through the universe, which is a huge and mysterious place. They talked a lot about the path they were going to take to get to the Lost Planet. The constellations and other celestial bodies shown on the maps, which were similar to those used by ancient sailors to find their way around the world, helped them on their trip. This wasn't just about finding out where they were in the world; it was also about getting a sense of how big the journey they were about to take was. The astronauts became closer as they worked because they all wanted to reach the same goal and were excited about the trip that was coming up. What they hoped to find on the Lost Planet was something they talked about. Their drive spread to everyone who was trying, not just their group. It was clear that this trip wasn't just a quest; it was a journey into the unknown that showed how the human spirit needs to explore and understand. With each day of planning, they became more ready. Everything was carefully packed, the spaceship was ready to go, and they had mental maps of the universe. They stood together because they had the same goal. They were not just explorers; they were leaders on the verge of making a finding that could change history. They were ready for the most exciting trip of their lives.

Chapter 3: The Take-Off On the day of the launch, everyone was looking forward to and excited about it. It was an event that everyone who saw would remember. After getting everything ready, the astronauts got on their spaceships, their hearts racing with excitement for the exciting trip they were about to go on. They said goodbye to their family, friends, and the commonly seen things on Earth. They were now ready to face the unknown. As they buckled up and double-checked their gear, they looked at each other with hope and made a promise to stick together no matter what. Then the moment they had all been waiting for came. The countdown started, and it could be heard all over the launch site. There was a chorus of excitement building up to the end. Three, two, one... set off the spaceship's engines, which shot the astronauts through the

atmosphere and into the sky with a huge roar. The earth shook as the sound of the rocket smashing through the air. It was an amazing show of how brave and creative people can be when they start a historic trip. As the rocket rose higher, Earth turned into a beautiful whirling ball of blue, green, and white light. The pretty sky gave way to the blackness of space, and there was a big area where the sun shone like a star far away. The pilots felt like they were flying without wings once they were no longer affected by gravity. It was an exciting feeling that they were weightless. As they looked out the windows, they were amazed because few people had ever seen Earth from space. It served as a reminder of how big and strange the world still was, as well as how small and linked everything was. They could see the vastness of space in front of them. It looked like a clean canvas with many stars, galaxies, and planets shining on it. They could never have imagined a world with so many amazing options. It was beyond beautiful. It was clear to the astronauts that they were part of a huge exploration that pushed the limits of human knowledge and desire. They also saw this amazing scene. In search of the Lost Planet, which had caught many people's attention, they were going into unexplored territory.

Weird Astronomy David A.J. Seargent,2010-09-24 Weird Astronomy appeals to all who are interested in unusual celestial phenomena, whether they be amateur or professional astronomers or science buffs who just enjoy reading of odd coincidences, unexplained observations, and reports from space probes that don't quite fit. This book relates a variety of unusual astronomical observations - unusual in the sense of refusing to fit easily into accepted thinking, or unusual in the observation having been made under difficult or extreme circumstances. Although some of the topics covered are instances of bad astronomy, most are not. Some of the observations recorded here have actually turned out to be important scientific breakthroughs. Included are some amusing anecdotes (such as the incident involving potassium flares in ordinary stars and the story of Abba 1, the solar system's own flare star!), but the book's purpose is not to ridicule those who report anomalous observations, nor is it to challenge scientific orthodoxy. It is more to demonstrate how what's weird often turns out to be far more significant than observations of what we expect to see.
