Proceedings of the 23rd International Conference on Industrial Engineering and Engineering Management 2016 Ershi Qi, Jiang Shen, Runliang Dou, 2017-03-07 International Conference on Industrial Engineering and Engineering Management is sponsored by Chinese Industrial Engineering Institution, CMES, which is the unique national-level academic society of Industrial Engineering. The conference is held annually as the major event in this area. Being the largest and the most authoritative international academic conference held in China, it supplies an academic platform for the experts and the entrepreneurs in International Industrial Engineering and Management area to exchange their research results. Many experts in various fields from China and foreign countries gather together in the conference to review, exchange, summarize and promote their achievements in Industrial Engineering and Engineering Management fields. Some experts pay special attention to the current situation of the related techniques application in China as well as their future prospect, such as Industry 4.0, Green Product Design, Quality Control and Management, Supply Chain and logistics Management to cater for the purpose of low-carbon, energy-saving and emission-reduction and so on. They also come up with their assumption and outlook about the related techniques' development. The proceedings will offer theatrical methods and technique application cases for experts from college and university, research institution and enterprises who are engaged in theoretical research of Industrial Engineering and Engineering Management and its technique's application in China. As all the papers are feathered by higher level of academic and application value, they also provide research data for foreign scholars who occupy themselves in investigating the enterprises and engineering management of Chinese style.

Detailing and Upgrading Steam Locomotives Jeff Wilson, Model Railroader, 2018-12-10 The late steam and steam-to-diesel transition era remain very popular with model railroaders. This book offers modelers a single reference guide for upgrading, detailing, modifying, and maintaining their steam locomotive models. Covered topics include: An overview of steam locomotives: types, history, and how they work. Upgrading and repowering older plastic and brass models. Adding DCC and sound; weathering; and modifying details to reflect various prototypes.

The Model Railroader's Guide to Locomotive Servicing Terminals Martin J. McGuirk, 2002 Learn about prototype engine servicing areas and their functions, and how to model them on any layout. Includes tips and techniques for modeling trackage, structures, and other terminal details appropriate for the steam or diesel era.

On the Problem of Sorting Railway Freight Cars Jens H. Maue, 2011-11-24 In this thesis the algorithmic foundations of a particular sorting problem from railway optimization are studied. The addressed problem is called train classification, and it refers to the fundamental procedure of rearranging the cars of several trains into other compositions of different orders comprising new trains. The train classification methods applied today present rather conservative approaches, and there is a lot of room for systematic improvement by applying optimization methods. The sorting processes are performed according to plans prepared in advance called classification schedules. They are conducted in specific railway facilities called classification yards. Without expensive redesigns of existing classification yards, the dwell time of railway cars can be reduced by

accelerating the core classification process itself. To this aim, the combinatorial structure of the sorting processes are studied in this thesis in order to provide algorithmic solutions for the abstract problems derived from the practical setting with formal proofs of their efficiency. Conversely, the gained insights are applied to real-world problem instances to show that the theoretical approaches work in practice and improve on the methods applied today. First of all, a novel encoding of classification schedules is presented. This does not only yield an efficient representation of train classification schedules, but it also allows characterizing feasible classification schedules and is applied to derive an algorithm for computing optimal classification schedules for the core version of the sorting problem. Several practical problem settings then yield further restrictions on a feasible schedule, which are shown to translate to formal constraints in the above mentioned representation. Successful solution approaches are then developed for various infrastructural as well as operational constraints. The former particularly cover different dimensions of limited track space, the latter include train departures and track space varying over time. The approaches comprise efficient exact and approximation algorithms and also integer programming models that allow integrating several such constraints simultaneously. Then, another problem variant deals with the robustness aspect of uncertain input, which here corresponds to disruptions in the railway network resulting in trains arriving delayed at the classification yard. A model is introduced in which a prepared schedule that became infeasible by an arising disruption is adjusted by inserting some additional steps into the sorting process. Without any assumptions on the amount of disruption, this robust problem variant is shown to be NP-hard. Still, a generic method is provided for the general setting, from which an efficient algorithm for a realistic model of disruption is derived. The developed theoretical approaches are compared to each other and evaluated experimentally using various synthetically derived and real-world traffic instances to show that the achieved insights and solutions are relevant in practice.

The Wonderful World of Model Trains David B. Brokaw,2015-03-14 There's a nostalgia associated with model trains and railroading -- even if it's unspoken. Railroads take us back to an earlier era. A more basic time. When spending a week or more on a train was seen as a luxury -- an event in itself -- not at as merely a mode of transportation. You've probably already scouted some model railroad shows. You've no doubt recognized the camaraderie and the passion these folks have. And yes, you're interested in becoming a part of that. The Wonderful World of Model Trains will help you do just that! It's a comprehensive guide to model railroading written for someone who is new to this hobby, starting with some basic train knowledge & terminologies, and continuing on to the more detailed aspects of the hobby. And yes, this hobby can indeed get quite detailed. And that tends to be intimidating to some people. The beauty of this hobby is that you can get involved at just the level you care too. You'll discover that every model railroader is in it for the love of the trains and the history. The vast majority of us are not out to make a fast buck from our interests. Here's some of the things you'll learn in The Wonderful World of Model Trains: - How to create stunning terrain in your scenery with these 3 simple techniques... - Different scales, gauges, standards in the world of model railroading and what they all mean... - 2 simple keys (that are right in front of your eyes) to build your own benchwork... - WARNING: 3 things you should never do when it comes to wiring... - A pennies on the dollar approach to finding model train parts... - How to avoid derailling problems... - 3 proven steps to running multiple trains on one track... - 6 time tested and proven strategies for laying out train tracks... - When to add onto your set with locomotives and rolling stock... - 7 everyday but often overlooked tips and tricks for building the best layouts for your scenery... - How to do general maintenance on your model trains and tracks... - And much more...
