Urban Machinery Mikael Hård,Thomas J. Misa,2008 Urban Machinery investigates the technological dimension of modern European cities, vividly describing the most dramatic changes in the urban environment over the last century and a half. Written by leading scholars from the history of technology, urban history, sociology and science, technology, and society, the book views the European city as a complex construct entangled with technology. The chapters examine the increasing similarity of modern cities and their technical infrastructures (including communication, energy, industrial, and transportation systems) and the resulting tension between homogenization and cultural differentiation. The contributors emphasize the concept of circulation--the process by which architectural ideas, urban planning principles, engineering concepts, and societal models spread across Europe as well as from the United States to Europe. They also examine the parallel process of appropriation--how these systems and practices have been adapted to prevailing institutional structures and cultural preferences. Urban Machinery, with contributions by scholars from eight countries, and more than thirty illustrations (many of them rare photographs never published before), includes studies from northern and southern and from eastern and western Europe, and also discusses how European cities were viewed from the periphery (modernizing Turkey) and from the United States. Contributors Hans Buiter, Paolo Capuzzo, Noyan Dinçkal, Cornelis Disco, Pål Germuska, Mikael Hård, Martina Heiler, Dagmara Jajszniak-Quast, Andrew Jamison, Per Lundin, Thomas J. Misa, Dieter Schott, Marcus Stippak Mikael Hård is Professor of History at Darmstadt University of Technology. His books include *The Intellectual Appropriation of Technology: Discourses on Modernity, 1900-1939* (coedited with Andrew Jamison; MIT Press, 1998). Thomas J. Misa is ERA-Land Grant Professor of the History of Technology at the University of Minnesota, where he directs the Charles Babbage Institute. His books include *Modernity and Technology* (coedited with Philip Brey and Andrew Feenberg; MIT Press, 2003).

**Concepts of Farm Machinery and Power** Dipankar Mandal, 2016-12-02 In the branch of Agricultural Engineering, especially in Farm Machinery and Power sector, there is a need for a book exclusively dealing with various concepts and their applications in transparent and clear manner. So, an effort has been made to prepare this book entitled Concepts of Farm Machinery and Power to meet the demand of students, teachers, RS. The book will be useful immensely to the students preparing for GATE examination in AG papers and also for JRF, ARS, IFS examinations. The chapters of the book deals with conceptual analysis of farm machineries, which are confusing and difficult to understand. It is expected that the theoretical as well as numerical analysis of this book will sharpen the ingenious power of the readers and help them to solve problems quickly. Moreover, many problems are solved in different ways, which will help the readers in understanding and applying the concepts properly. I am extremely grateful to my teachers Dr. Subrata Karmakar, Associate Professor, Dept. of Farm Machinery and Power, Bidhan Chandra Krishi Viswavidyalaya; Prof. Partha Sarathi Chattopadhyaya, Professor, Dept. of Farm Machinery and Power, Bidhan Chandra Krishi Viswavidyalaya; Er. Ravi Reddy, Senior Technician, CFMTTI, Budni, M.P., and my B. Tech friends for their encouragement and kind cooperation. Sagacious suggestions and discrete criticism are welcome to improve the book further, so that it becomes more relevant and more beneficial to the readers in real terms. Finally, I envisage this attempt as an important step in removing hurdles in the path of popularization of Agricultural Engineering. I hope that it will fire imaginations and ability of many Agricultural Engineers in the profession to produce such innovative works in future. "Agricultural Engineering— galvanizing agriculture".

The Machinery of Life David S. Goodsell, 2013-03-09 A journey into the sub-microscopic world of molecular machines. Readers are first introduced to the types of molecules built by cells: proteins, nucleic acids, lipids, and polysaccharides. Then, in a series of distinctive illustrations, the reader is guided through the interior world of cells, exploring the ways in which molecules work in concert to perform the processes of living. Finally, the author shows us how vitamins, viruses, poisons, and drugs each have their effects on the molecules in our bodies. David Goodsell, author and illustrator, has prepared a fascinating introduction to biochemistry for the non-specialist. His book combines a lucid

text with an abundance of drawings and computer graphics that present the world of cells and their components in a truly unique way.
