Real-Time & Stream Data Management Wolfram Wingerath,Norbert Ritter,Felix Gessert,2019-01-02 While traditional databases excel at complex queries over historical data, they are inherently pull-based and therefore ill-equipped to push new information to clients. Systems for data stream management and processing, on the other hand, are natively push-oriented and thus facilitate reactive behavior. However, they do not retain data indefinitely and are therefore not able to answer historical queries. The book provides an overview over the different (push-based) mechanisms for data retrieval in each system class and the semantic differences between them. It also provides a comprehensive overview over the current state of the art in real-time databases. It first includes an in-depth system survey of today's real-time databases: Firebase, Meteor, RethinkDB, Parse, Baqend, and others. Second, the high-level classification scheme illustrated above provides a gentle introduction into the system space of data management: Abstracting from the extreme system diversity in this field, it helps readers build a mental model of the available options.

Beyond the Storms Dane S Egli,2014-12-18 This book deals with both actual and potential terrorist attacks on the United States as well as natural disaster preparedness and management in the current era of global climate change. The topics of preparedness, critical infrastructure investments, and risk assessment are covered in detail. The author takes the reader beyond counterterrorism statistics, better first responder equipment, and a fixation on FEMA grant proposals to a holistic analysis and implementation of mitigation, response, and recovery efforts. The recent Oklahoma tornadoes and West Texas storage tank explosion show the unpredictability of disaster patterns, and the Boston Marathon bombings expose the difficulty in predicting and preventing attacks. Egli makes a compelling case for a culture of resilience by asserting a new focus on interagency collaboration, public-private partnerships, and collective action. Building upon the lessons of the 9/11 attacks, hurricane Katrina, and the Deepwater Horizon oil spill, the basic findings are supported by a creative mix of case studies, which include superstorm Sandy, cascading power outages, GPS and other system vulnerabilities, and Japan's Fukushima disaster with its sobering aftermath. This book will help a new generation of leaders understand the need for smart resilience.

Management Strategies to Adapt Alpine Space Forests to Climate Change Risks Gillian Cerbu,Marc Hanewinkel,Giacomo Gerosa,Robert Jandl,2013-08-28 Climate scenarios suggest that current forest stands will face radically different temperature and precipitation conditions in the future. Developing future strategies for forest management in the face of uncertain and highly variable forecasts of future site conditions is a great challenge. Here we have analyzed transnational case studies dealing with different manifestations of climate change effects. We intend to stimulate the discussion on management strategies to adapt forests in the Alps to climate change risks. The presented results are derived from the INTERREG project Management Strategies to Adapt Alpine Space Forests to Climate Change Risks that was implemented within the framework of the European Territorial Cooperation Alpine Space Programme 2007-2013.
