Becoming Lean Jeffrey K. Liker, 1997-11-12 What is Lean? Pure and simple, lean is reducing the time from customer order to manufacturing by eliminating non-value-added waste in the production stream. The ideal of a lean system is one-piece flow, because a lean manufacturer is continuously improving. Most other books on lean management focus on technical methods and offer a picture of how a lean system should look like. Other books provide snapshots of companies before and after lean was implemented. This is the first book to provide technical descriptions of successful solutions and performance improvements. It's also the first book to go beyond snapshots and includes powerful first-hand accounts of the complete process of change; its impact on the entire organization; and the rewards and benefits of becoming lean. At the heart of *Becoming Lean* are the stories of American manufacturers that have successfully implemented lean methods. The writers offer personalized accounts of their organization's lean transformation. You have a unique opportunity to go inside the implementation process and see what worked, what didn't, and why.

The Story of Indian Manufacturing Vijay K. Seth, 2017-09-29 This book discusses the role historical events played in determining the pattern of growth of Indian manufacturing. Two important historical events significantly influenced the course of Indian manufacturing from the 15th century AD. The first was the arrival of European merchants via sea route pioneered by Vasco-da-Gama in 1498 and the other was the dawn of the Mughal Empire in 1526. The book explores how these two events provided the appropriate stimulus for the emergence of traditional flexible manufacturing in India and how they played a vital role in the pattern of growth of the Indian manufacturing: The Mughal Empire created an integrated economy of continental size whereas European trading companies expanded the commercial connectivity of the Indian economy and South East Asia. It further investigates how the circumstances created by the colonial administration, factor endowment and market conditions created the complex forms of manufacturing enterprises that India inherited at the time of independence. It is a valuable resource for students of history, economic history, business history and the history of technology.

Faster, Better, Cheaper in the History of Manufacturing Christoph Roser, 2016-10-04

The industrial revolution, mechanization, water and steam power, computers, and automation have given an enormous boost to manufacturing productivity. *Faster, Better, Cheaper in the History of Manufacturing* shows how the ability to make products faster, better, and cheaper has evolved from the stone age to modern times. It explains how different developments over time have raised efficiency and allowed the production of more and better products with less effort and materials, and hence faster, better, and cheaper. In addition, it describes the stories of inventors, entrepreneurs, and industrialists and looks at the intersection between technology, society, machines, materials, management, and – most of all – humans. *Faster, Better, Cheaper in the History of Manufacturing* follows this development throughout the ages. This book covers not only the technical aspects (mechanization, power sources, new materials, interchangeable parts, electricity, automation), but organizational innovations (division of labor, Fordism, Taylorism, Lean). Most of all, it is a story of the people that invented, manufactured, and marketed the products. The book shows how different developments over time raised efficiency and allowed production of more with less effort and materials, which brought us a large part of the wealth and prosperity we enjoy today. The stories of real inventors and industrialists are told, which includes not only their successes but also their problems and

failures. The effect of good or bad management on manufacturing is a recurring theme in many chapters, as is the fight for intellectual property through thrilling tales of espionage. This is a story of successes and failures. It is not only about technology but also about social aspects. Ultimately, it is not a book about machines but about people!

The Firestone Story Alfred Lief, 1951 Here are the memoirs of a modern industrial enterprise--an intimate business history that is part of the pageant of America's history, giving us a richer understanding of the greatness and glory of our country. As the first fifty years of The Firestone Tire & Rubber Company coincided with the halfway mark of the twentieth century, they spanned the wonderful period of change from horse-and-buggy days to the automotive era. What were the creative forces at work? What did they achieve in terms of public service? The Firestone Story narrates the flow of events in absorbing detail.

Scientific Research and Manufacturing B. M. Suri, 2019 The inability of developing countries to charter a course for technology development and deployment, independent of developed countries, leads to a continued monopoly of developed countries in the high technology sector. This reality has pushed developing countries up a ladder of technology growth, and this book discusses how India should address these challenges. It will be interesting to witness how the narrative evolves in the context of the development of several potentially disruptive technologies, and the onset of the so-called industrial revolution 4.0. This challenge may manifest itself differentially for developing and developed countries, in regards to their contrasting levels of technology development, employment scenarios, and populations, but in this text, the unique challenges of India are analyzed. The challenge of disruptive technologies is daunting for a country like India, with a large, unskilled population. India symbolizes the types of problems which many developing countries face, but also provides hope and could act as a bridge between different levels of technology development. On one hand, the country's workforce is known to be major provider of IT solutions to the developed world, and on other hand, it produces and exports cheap generic medicines to the world's poorest countries. However, the challenge of disruptive new technologies is quite significant, and may necessitate a bold and imaginative response from its scientific establishments, STEM Higher Education system, industries, and policy makers. Policy makers may have to shed off some of their legacies and cultural mindsets to genuinely encourage innovation and attract as well as retain talent, even in the face of competition from developed countries. This book suggests that several developing countries facing similar technology or development challenges should join hands. Many of these closely interlinked issues are discussed, and the book aims to stimulate discussion between the diverse players such as those in the sciences, technology, STEM HE, Government policy making, entrepreneurship as well as and business.

Made in Illinois Rolf Achilles, 1993 A story of Illinois manufacturing published in honor of the Illinois Manufacturers' Association Centennial.

Crash Landing Liz Hoffman, 2023-03-07 A kaleidoscopic account of the financial carnage of the pandemic, revealing the fear, grit, and gambles that drove the economy's winners and losers—from a leading business reporter “A true masterwork . . . perceptive, well researched, and captivating.”—David M. Rubenstein, co-founder and co-chairman of The Carlyle Group, bestselling author of *How to Invest* It was the ultimate test for CEOs, and almost none of them saw it coming. In early March 2020, with the Dow Jones flirting with 30,000, the world's biggest companies were riding an eleven-year economic high. By the end of the month, millions were out of work, iconic firms were begging for bailouts, and countless small businesses were in freefall. Slick consulting teams and country-club connections were suddenly of little use: Business leaders were fumbling in the dark, tossing out long-term strategy and making decisions on the fly—decisions that, they

hoped, might just save them. In *Crash Landing*, award-winning business journalist Liz Hoffman shows how the pandemic set the economy on fire—but if you look closely, the tinder was already there. After the global financial crisis in 2008, corporate leaders embraced cheap debt and growth at all costs. Wages flatlined. Millions were pushed into the gig economy. Companies crammed workers into offices, and airlines did the same with planes. Wall Street cheered on this relentless march toward efficiency, overlooking the collateral damage and the risks sowed in the process. Based on astonishing access inside some of the world's biggest and most iconic companies, *Crash Landing* is a kaleidoscopic account of the most remarkable period in modern economic history, revealing—through gripping, fly-on-the-wall reporting—how CEOs battled an economic catastrophe for which there was no playbook: among them, Airbnb's Brian Chesky, blindsided by a virus in the middle of a high-stakes effort to go public; American Airlines' Doug Parker, shuttling between K Street and the White House, determined to secure a multibillion-dollar bailout; and Ford's Jim Hackett, as his assembly lines went from building cars to churning out ventilators. In the tradition of *Too Big to Fail* and *The Big Short*, *Crash Landing* exposes the fear, grit, and gambles behind the pandemic economy, while probing its implications for the future of work, corporate leadership, and capitalism itself, asking: Will this remarkable time give rise to newfound resilience, or become just another costly mistake to be forgotten?
