JavaScript for Absolute Beginners Terry McNavage,2011-08-23 If you are new to both JavaScript and programming, this hands-on book is for you. Rather than staring blankly at gobbledygook, you'll explore JavaScript by entering and running hundreds of code samples in Firebug, a free JavaScript debugger. Then in the last two chapters, you'll leave the safety of Firebug and hand-code an uber cool JavaScript application in your preferred text editor. Written in a friendly, engaging narrative style, this innovative JavaScript tutorial covers the following essentials: Core JavaScript syntax, such as value types, operators, expressions, and statements provided by ECMAScript. Features for manipulating XHTML, CSS, and events provided by DOM. Object-oriented JavaScript, including prototypal and classical inheritance, deep copy, and mixins. Closure, lazy loading, advance conditional loading, chaining, currying, memoization, modules, callbacks, recursion, and other powerful function techniques. Encoding data with JSON or XML. Remote scripting with JSON-P or XMLHttpRequest Drag-and-drop, animated scrollers, skin swappers, and other cool behaviors. Optimizations to ensure your scripts run snappy. Formatting and naming conventions to prevent you from looking like a greenhorn. New ECMAScript 5, DOM 3, and HTML 5 features such as Object.create(), Function.prototype.bind(), strict mode, querySelector(), querySelectorAll(), and getElementsByClassName(). As you can see, due to its fresh approach, this book is by no means watered down. Therefore, over the course of your journey, you will go from JavaScript beginner to wizard, acquiring the skills recruiters desire.

Vertebrate Paleontology in Utah David D. Gillette,1999 The 52 papers in this vary in content from summaries or state-of-knowledge treatments, to detailed contributions that describe new species.

Although the distinction is subtle, the title (Vertebrate Paleontology in Utah) indicates the science of paleontology in the state of Utah, rather than the even more ambitious intent if it were given the title "Vertebrate Paleontology of Utah" which would promise an encyclopedic treatment of the subject. The science of vertebrate paleontology in Utah is robust and intense. It has grown prodigiously in the past decade, and promises to continue to grow indefinitely. This research benefits everyone in the state, through Utah's museums and educational institutions, which are the direct beneficiaries.

Net Neutrality Christopher T. Marsden, 2010-01-18 This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com. Chris Marsden maneuvers through the hype articulated by Network Neutrality advocates and opponents. He offers a clear-headed analysis of the high stakes in this debate about the Internet's future, and fearlessly refutes the misinformation and misconceptions that about' Professor Rob Freiden, Penn State University Net Neutrality is a very heated and contested policy principle regarding access for content providers to the Internet end-user, and potential discrimination in that access where the end-user's ISP (or another ISP) blocks that access in part or whole. The suggestion has been that the problem can be resolved by either introducing greater competition, or closely policing conditions for vertically integrated service, such as VOIP. However, that is not the whole story, and ISPs as a whole have incentives to discriminate between content for matters such as network management of spam, to secure and maintain customer experience at current levels, and for economic benefit from new Quality of Service standards. This includes offering a 'priority lane' on the network for premium content types such as video and voice service. The author considers market developments and policy responses in Europe and the United States, draws conclusions and proposes regulatory recommendations.

Applications of Soft Computing Jörn Mehnen, Mario Koeppen, Ashraf Saad, Ashutosh Tiwari, 2009-08-27 WSC2008 Chair's Welcome Message Dear Colleague, The World Soft Computing (WSC) conference is an annual international online conference on applied and theoretical soft computing technology. This WSC 2008 is the thirteenth conference in this series and it has been a great success. We received a lot of excellent paper submissions which were peer-reviewed by an international team of experts. Only 60 papers out of 111 submissions were selected for online publication. This assured a high quality standard for this online conference. The corresponding online statistics are a proof of the great world-wide interest in the WSC 2008 conference. The conference website had a total of 33,367 different human user accesses from 43 countries with around 100 visitors every day, 151 people signed up to WSC to discuss their scientific disciplines in our chat rooms and the forum. Also audio and slide presentations allowed a detailed discussion of the papers. The submissions and discussions showed that there is a wide range of soft computing applications to date. The topics covered by the conference range from applied to theoretical aspects of fuzzy, neuro-fuzzy and rough sets over to neural networks to single and multi-objective optimisation. Contributions about particle swarm optimisation, gene expression programming, clustering, classification, support vector machines, quantum evolution and agent systems have also been received. One whole session was devoted to soft computing techniques in computer graphics, imaging, vision and signal processing.

New Prognostic and Predictive Markers in Cancer Progression Susan Costantini, Alfredo Budillon, Alfredo Budillon, 2021-02-12 Biomarkers are of critical medical importance for oncologists, allowing them to predict and detect disease and to determine the best course of action for cancer patient care. Prognostic markers are used to evaluate a patient's outcome and cancer recurrence

probability after initial interventions such as surgery or drug treatments and, hence, to select follow-up and further treatment strategies. On the other hand, predictive markers are increasingly being used to evaluate the probability of benefit from clinical intervention(s), driving personalized medicine. Evolving technologies and the increasing availability of “multiomics” data are leading to the selection of numerous potential biomarkers, based on DNA, RNA, miRNA, protein, and metabolic alterations within cancer cells or tumor microenvironment, that may be combined with clinical and pathological data to greatly improve the prediction of both cancer progression and therapeutic treatment responses. However, in recent years, few biomarkers have progressed from discovery to become validated tools to be used in clinical practice. This Special Issue comprises eight review articles and five original studies on novel potential prognostic and predictive markers for different cancer types.

Convergence in European Digital TV Regulation Christopher T. Marsden, Stefaan G. Verhulst, 1999
Analyzing the role of governments in the regulation of the new Information Society, the ten chapters in this book stem from a seminar hosted by the European Media Regulation Seminar Group (ESRG) at the University of Warwick. Each chapter explores the regulatory responses of the UK government and the EU to commercial, technical and market convergence in the broadcasting, telecommunications, print media and computing sectors. The text focuses on the establishment of satellite pay-TV, telecommunications and the launch of digital terrestrial TV as they blend real and cyber-governance.

Self-regulation and the Internet Monroe Edwin Price, Stefaan G. Verhulst, Stefaan Verhulst, 2005-01-01
Every day, societal demand grows for some form of control or supervision over something that appears inherently beyond governance: the Internet. The gulf between community

aspiration and the perceived limits on government capacity forces each entity, industry, and regulator to conduct a thorough and painstaking search for an appropriate solution. The resolution to this dilemma requires the innovation of regulatory design for the Internet. Without flexibility and responsiveness, traditional law and regulation cannot adequately address the transnational, intangible, and ever changing Internet space. Attempts at Internet regulation generally have moved away from direct legal control and toward more flexible variations of what can be termed 'self-regulation.' This ground-breaking book by two leading authorities in this new field of law concerns the mushrooming growth of institutions and systems of self-regulation on the Internet. Internet self-regulation involves many issues, including e-commerce, technical protocols, and domain names management, but most public concern and debate has been over illegal and harmful content on the Internet. *Self-Regulation and the Internet* examines how self-regulatory entities for content relate to other quasi-legal and state institutions, what powers are accorded to or seized by self-regulatory institutions, and how the use of self-regulation can contribute to the more effective and more efficient realization of both economic and societal goals. This book offers: a general and theoretical examination of self-regulation, focusing on codes of conduct; approaches to the methodology and process for adopting such codes; descriptions and evaluations of technical devices as self-regulatory tools; and an analysis of Internet self-regulation in a converged and digital environment. The analysis encompasses a wide spectrum, from technical matters of filters and transmission streams to such important legal issues as the possible meanings of such terms as 'illegal and harmful.' Crucial topics include ISP service agreements, anti-spam measures, regulation of hate speech, digital television, defining a common language for metainformation, and a great deal more. The geographic scope is global, with numerous detailed references to developments in Europe, North America, Asia, and

Australia. The breadth and depth of this analysis, and the vast quantity of information that underpins it, give this book an authoritative preeminence not to be found elsewhere. In the coming years, as the material it examines continues to grow and change in ever more dramatic ways, it will be turned to again and again for its invaluable insights and recommendations.

The Scientism Delusion Gregory Lessing Garrett,2018-03-20 This enthralling page-turner breaks all the molds, and fearlessly exposes the deepest darkest intrigue in history...The Luciferian Agenda for a New World Order. In it, we learn of the Luciferian roots of Modern Science, as the reader is transported back in time to the insidious origins of modern-day Scientism, the current religion of most scientists today. Through an excursion into the roots of Scientism, Mr. Garrett deftly retraces the historical antecedents of Scientism, echoing back to The Secret Mystery Schools of Kabbalistic, Egyptian Hermeticism, onwards into the true nature of Freemason and Alchemical Occultist, Sir Isaac Newton, and then further into the nefarious Vatican Jesuit Priesthood, whose hidden hand can be linked to the creation of The Illuminati, as well as the current Luciferian New Age Religion. Finally, the serpentine path leads up into modern Freemasonic Luciferian, NASA, and then to The Jesuit Controlled Alien Deception about to take hold of the world. --Christian Chesterfield Ph.D.

Design of Anti-AIDS Drugs Erik De Clercq, 1990 There are several steps in the replicative cycle of human immunodeficiency virus (HIV) that could be considered as adequate targets for chemotherapeutic intervention, e.g., virus attachment to the cells, virus penetration and uncoating, transcription of the viral (RNA) genome to proviral DNA, integration of the proviral DNA into host cell DNA, transcription of the proviral precursor proteins to mature viral proteins, assembly and release ('budding') of the viral particles. These processes depend on, and are regulated by, specific viral proteins. This makes many of these processes and proteins plausible targets for the design of selective inhibitors. The contributions assembled in this book are aimed at presenting what is known anno 1990 about (1) the different steps in the HIV replicative cycle that could be considered as targets for anti-HIV agents, (2) the compounds that interact with these targets and offer promise as candidate drugs for the treatment of HIV infection, and (3) to the extent that it has been resolved, the mechanism of interaction of the anti-HIV agents with their putative targets.
