Airbrushing Scale Model Aircraft Robin Carpenter, 2018-09-23

Airbrushing Scale Model Aircraft is a practical guide to the application and techniques of painting aircraft in any scale. It provides guidance on buying airbrushing equipment, setting it up and operating it safely, and offers detailed explanations of how airbrushes and compressors work, alongside their various components. The reader is taken through basic exercises to learn how to control airbrushing equipment before moving on to more advanced paint application techniques. This book also includes guides to preparation, information on the use of primers, and a handy troubleshooting guide to help identify and resolve common faults. Richly illustrated and filled with step-by-step guides to paint application for model aircraft, this book is an essential reference and practical guide for anyone looking to airbrush model aircraft in any scale and will be of great interest to plastic modellers, particularly aviation, from beginner to experienced modeller.

Modelling the F4F Wildcat Mark Glidden, 2012-08-20 The F4F Wildcat was an aircraft of the type of which legends are made. Without the handling performance that made the Japanese Zero so famous, it was well regarded for its ruggedness and firepower and,

in the hands of a skilled pilot who understood both its strengths and weaknesses, it was capable of holding its own against the best that its opponents had to offer. This book details projects that encompass four variants of the F4 Wildcat. As they were supplied to a number of air forces during the war, including the RAF, there is a wide range of markings available to modellers which are also dealt with in detail. Covering a range of modelling abilities from a beginner's first build to an expert scratch-building extras, this book is illustrated with full-colour step-by-step photographs.

Simulation of Autonomic Logistics System (ALS) Sortie

Generation Paul D. Faas, 2003-03-01 The Air Force needs tools for analysis and evaluation of new logistic operational concepts. The purpose of this research was to conflict a discrete event simulation model of the aircraft sortie generation process to permit what- if analyses of these concepts. The current Air Force logistics operations system is reactive in nature meaning that after the aircraft detects a part failure, the maintenance person must perform fault isolation procedures and then steps are taken to repair or replace the faulty item. The Autonomic Logistics System (ALS) concept changes the reactive process into a proactive one with the employment of technologies such as prognostics and distributed

information network. Certain logistics tasks can be handled automatically or autonomously i. e. ordering parts, requesting maintenance specialists, and notifying maintenance control center. The conclusion of this research was that an aircraft equipped with the ALS increased the measures of effectiveness (MOE) like mission capable rate and flying scheduling effectiveness tip to a point. The research indicated that as ALS false alarms grew these MOEs decreased and eventually were worse than the baseline system. However, it is worth noting that this research simulated a worst case false alarm scenario, a part removal and replacement with each false alarm.

Designing Model Aircraft Peter Miller, 1995-01-01

Kuwait Journal of Science & Engineering ,1996

Manpower, a Model of Tactical Aircraft Maintenance Personnel

Requirements: Overview of model development and application

William Smith Furry, 1979 Describes MANPOWER, a computer model for predicting the total force base-level maintenance personnel requirements of prospective aircraft in the USAF Tactical Air Command. The model is designed to be used early in the acquisition process when it is desirable to understand the probable total maintenance personnel requirements of proposed weapon

systems. MANPOWER requires inputs concerning mission types, sortie rates, sortie lengths, deployment patterns, squadron size, peacetime base sizes, and maintenance workload. The workload can be expressed as maintenance manhours per flying hour or, if more information is available, in terms of mean-time-between-failures and mean-time-to-repair at the second digit work unit code level. Model output includes estimates of personnel requirements for the total force, for individual base size/deployment patterns, for maintenance squadrons, for officers and enlisted personnel, for overhead and supervision, and for major individual shops and groups of work centers.

Building and Displaying Scale Model Aircraft Paul Boyer, 1998

How to make a high-quality display of any model aircraft. Teaches basic aircraft modeling preparation and assembly techniques. Includes suggestions for painting and decaling with special attention to creative displays and mounting tips for finished projects.
