Handbook of Model Rocketry George Harry Stine,1976 Provides detailed instructions on how to build, launch, track, and recover a wide variety of model rockets.

Launch Magazine's History of Rockets and Model Rockets Mark Mayfield,2009-10-28 In 1954, before the United States had even launched its first satellite into orbit, a Nebraska shoe salesman named Orville Carlisle developed a small black powder motor that could fire a toy rocket to 1,000 feet or more, blast out a parachute with a small ejection charge, and allow the model to float harmlessly to the ground. America was hooked and hobby rocketry was born. Complete with explanations of the events and scientific developments that led to the proliferation of hobby rocketry, Launch Magazine's History of Rockets Model Rockets is a full-color pictorial history of aerospace endeavors around the world.

Handbook of Model Rocketry G. Harry Stine,Bill Stine,2004-04-22 A fully updated new edition of the bible of model rocketry and the official handbook of the National Association of Rocketry G. Harry Stine was one of the founders of model rocketry and one of its most accomplished and respected figures. His Handbook of Model Rocketry has long been recognized as the most authoritative and reliable resource in the field. Now fully updated and expanded by Harry's son Bill Stine, who inherited his father's passion for model rockets, the new Seventh Edition includes the many changes in the hobby that have occurred since the last edition was published, such as new types of rockets, motors, and electronic payloads, plus computer software and Internet resources. This new edition also includes new photos and a new chapter on high-power rocketry. G. Harry Stine, founder and one-time president of the National Association of Rocketry, started the world's first model rocket company, whose kits are now in the Smithsonian. Topics in Advanced Model Rocketry Gordon K. Mandell,George J. Caporaso,William P. Bengan,2003-02-01 The advanced model rocketeer will find that this book allows him to predict every aspect of his model's performance. It is a comprehensive and rigorous treatment of the trajectory analysis, aerodynamics, and flight dynamics of model rockets; it contains many original methods and demonstrates a wealth of complex problems that still require solutions in model rocketry. More specifically, Topics in Advance Model Rocketry include methods that will enable the modeler to calculate the following: the point-mass approximation altitude for any rocket or cluster; the drag coefficient, normal force coefficient, damping factor, moments of inertia, restoring moments, and so forth, of his vehicle; and the dynamic behavior of his rocket, that is, oscillation frequency, amplitude, spin rate, and perturbing forces. In addition, the equations will allow the modeler to design his vehicle so that wind and other perturbing flight forces have a minimal effect on its performance. In the past, many older modelers left the hobby of model rocketry because advanced information and challenges were lacking; now Topics in Advance Model Rocketry can provide the veteran modeler with exactly the information he needs, while it also serves as a basis for further theoretical research in the field.

Advanced Model Rocketry Michael A. Banks,1985

Launch Magazine's History of American Rocketry Mark Mayfield, 2021-09-21 A must-have for anyone fascinated by space travel, rocketry, NASA, SpaceX, and more! A new era in spaceflight, led by SpaceX and other commercial rocket companies, is generating the kind of worldwide interest in space travel that we haven't seen since the space race of the 1960s. Kids are dreaming of becoming astronauts again. New feats, such as SpaceX's remarkable ability to land booster rockets, under powered descent, back on land or sea has galvanized a new generation of rocket enthusiasts. Yet none of this would be possible without the advances of rocketry over the past century. The Chinese were the first to develop black-powder fireworks and rockets centuries ago, but modern rocketry truly began with Robert Goddard's launch of a liquid-fueled rocket on a Massachusetts farm in 1926. That metal contraption—which flew just 41 feet high before arching over and streaking 184 feet into a cabbage patch—came just 43 years before Neil Armstrong stepped foot on the moon on July 20, 1969. Armstrong's Apollo 11 mission was made possible by a giant 36-story-tall Saturn V rocket that used some of the same propulsion principles as Goddard's first tiny, crude rockets. The beginning of the "Space Age" is considered to be Russia's launch of the world's first satellite, Sputnik, in 1957. But it was the pioneering human spaceflights of the 1960s that captured the imagination of the world and turned astronauts into heroes. Weapons of war—the Redstone, Atlas, and Titan II missiles—were converted into civilian launch boosters and led to the success of the Mercury and Gemini programs. All the while, Saturn rockets were being developed that would ultimately lead to the moon missions. Kids were so excited about these pioneering space flights that an entirely new hobby—model rocketry—was created to serve their interests. Small scale models of NASA's big rockets were ordered by the millions, generating a \$100 million hobby at a time when there were no video games, no internet, and no cable, just three broadcast television networks. Now, the next generation of rockets from SpaceX and other commercial companies, along with NASA's new launch vehicles and Orion spacecraft, will lead the United States and the world into a new era of rocketry—beginning with crewed flights to the moon as early as 2024, and ultimately to Mars within the first half of this century.
