**More details for modular models** Andreas Stach, Nowadays, the model ship builder always starts with a modular model. The renowned manufacturers offer numerous options for a relatively inexpensive and simple start. At some point, they go on a test drive to model waters and to meetings of model building clubs - and there they see their painstakingly built model lined up in multiples. The model builder decides to choose one that is a little rarer for the next model. There is a solution to this problem, because construction kits can be strongly individualised with sometimes very little means. From the content: • The construction kit selection • The conversion and customisation of various kit models from: Billing Boats, Deans Marine, Graupner, Krick, Model Slipway, robbe, Sievers Modellbau. • Marine models for individualisation • Conversion ideas for naval units • Modify and improve models of the DGzRS • Extreme conversions on a modular basis • Create unique models with little effort

*Micromodels to water* Thorsten Feuchter, Harry Jacobsen, Lennart Seitz, Dirk Stukenbrok, Ships, submarines, amphibious vehicles - functional in 1:87/H0 Models in small scales are particularly fascinating - micromodels on water even more so! In this book, the four authors - most of them already known from other books on the subject of micromodels - present ships, submarines and amphibious vehicles almost completely in 1:87 scale, also known as H0. Of course, they do not limit themselves to the pure driving functions. The models in this book are packed with special functions of all kinds - by the way, many of them can also be used for models in larger scales. The technology presented here makes almost everything possible and the instructions show that a replica is also feasible with normal means. Take up the challenge and put a micro-functional model on the water! From the content • Introduction – a few thoughts in advance • Henry Morgan – a small harbour tugboat to warm up • Little helpers – simple tools with great effect • Arngast – a plastic model learns to dive • Wulf Isebrand – deep drawing technology in miniature • Soldering aid – hole grid board to help with soldering • LED – Handling LEDs in Model Making • DUKW – a ship with wheels • ROV – maximum fun with minimal effort • Calypso – a handy functional model • Hermann Marwede – conversion of a Revell - model in 1/72nd scale • Friesland – a crane ship with play value

*Model Aviation ABC* Martin Simons, Martin Simons, a passionate model pilot and multiple book author about the basics of model flying and aerodynamics, describes in an entertaining way why and how models fly in his book Modellflug-ABC. With his clear and easy to understand language, he succeeds in summarizing even complex topics. For both beginners and advanced pilots, Model Aviation ABC is a valuable aid to understanding when and why models fly well, and how to use this knowledge to expand and refine your own flying skills. From the Content: In Model Aviation ABC the basics of aerodynamics (without mathematical deepening) are explained in connection with model flying, e.g. to clarify the effect of control reactions. What is the effect of a symmetrical or a semi-symmetrical airfoil? What triggers a stall and how do you recover the model? What makes a model stable and how do I achieve high stability? What is the importance of the propeller? Many questions that arise in the everyday life of model pilots are answered in the Model Aviation ABC in an explanatory way. The goal is to know and understand aerodynamic processes to set up and fly models well. Over 100 drawings illustrate the processes described in the text and round off the basics taught in the Model Aviation ABC.

**Functions in the ship model** Günther Slansky, Would you like to breathe a little more life into your model ships by adding special, supplementary, and special functions? With some basic knowledge of electrics and electromechanics, it is possible! Whether you are a beginner or an advanced modeller - draw

from the author's more than 50 years of modelling experience. After an introduction to the basics of electrical engineering, Günther Slansky shows you detailed electromechanical solutions with many drawings and pictures, right up to the complete functional set-up - both for remote-controlled driving models and for the so-called stand-alone and showcase models. From the content: • Basics of electrical engineering • Commercially available electronic components • Electric motors, relays, and servos • Electric power from batteries and 230 V mains • General basic circuits • Lighting, motor interference suppression, polarity reversal • Limit switch control, rectification • Electronic single and dual-channel switches • Constructive solutions • Functions with rotary movements • Functions with longitudinal movements • Function programmes • Basic functions of drive systems • Moving figures • Moving equipment • Special functions • Literature recommendations • The strike price shown here is the lowest price of the last 30 days for this product.

Cardboard model making Dr. Ulrich Böhme, Cardboard model making is probably one of the first types of model making for which kits or building sheets were offered in series. For the first time, many people were able to build models of real or fictitious buildings and vehicles. It is interesting to note that cardboard model making – even though nowadays there is an almost unlimited variety of materials available for model making – is experiencing a great renaissance and an active community of cardboard model makers has developed. Nowadays there is almost nothing that is not available as cardboard model building sheets – whether from professional publishers or from idealistic suppliers. In this book, Ulrich Böhme looks at cardboard modelling from two perspectives. On the one hand, he describes the history of this form of model making in all its facets. On the other hand, he gives practical tips based on examples from the most diverse areas of cardboard model making. He shows how to create a simple model and how to improve it. He creates entire dioramas and restores aging historical models. In short: In this book he takes you into the fascinating world of cardboard model making! From the content: • Models are contemporary witnesses • Paper as a working material • Early cut-out and model sheets • Publishing houses • Which scale is the right one for me? • Working with paper • Tools • Adhesives • Rounding • Architectural models • Aircraft • Land vehicles • Ships • Special models • Self-build models • Building an old shipyard hall • Dioramas • Restoration and storage

*Polish Gliders* Kazimierz Wojciech Chudzinski, Gliders are the basis of aviation as we know it today, as they were the first devices with which people rose into the third dimension. Today they are only used as sports equipment, but they have reached a level of perfection that inspires everyone interested in aviation. Poland has always been one of the nations that have driven the development of gliders. Especially since the Second World War, Polish designers have created some of the most fascinating and successful gliders. Kazimierz Wojciech Chudzinski is a connoisseur of Polish aviation, and his special love belongs to gliders. In this first volume he has listed all the gliders built in Poland from 1945 to 1970. In this first volume he has listed all the gliders built in Poland between 1945 and 1970, described their history and collected impressive photographs, many of which have never been published before. The special feature, however, are the many detailed drawings of the individual gliders, which are also a valuable aid for the construction of model replicas. In addition to successful and legendary designs such as Mucha, Zefir and Foka, lesser known but no less interesting designs and project studies are also presented. Flying wing gliders and duck constructions are included as well as double hull machines and other unusual ideas. This book is an absolute must for anyone interested in gliding.

**Indoor flying for beginners** Wolfgang Traxler, Going flying – even in winter when it's stormy and snowing outside - is a long-cherished dream of model pilots. Until just a few years ago, the fulfilment of this dream of flying indoors was reserved for only a few specialists. Only the discovery of the material

Depron for model flying, brushless motors and LiPo batteries as well as the ever smaller and lighter components for the RC system make possible flying weights and performances with which even demanding aerobatics, including 3D flight, can be realised. This book makes it easier for the interested model pilot to get started in indoor (aerobatic) flying and gives tips on equipment as well as on building an indoor flying model. From the content: • Silhouette or full fuselage, self-built or finished model? • CFRP profiles, Depron, surface design • Motor, controller, batteries, connectors, charging station • The RC components - transmitter, receiver, servos, rudder linkages, pushrods, cable linkages, • Tips on material processing and assembly • Tips for flying in - flying technique in the hangar and first aerobatic manoeuvres • Illustrated repair instructions for a damaged front wing • Requirements for the hall, contact persons, safety rules, hall regulations, • preparation of the hall and special features of the unfamiliar environment • Tabular compilation of the models used

*Achtung-Panzer!* Heinz Guderian,1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Mr. Fluxus Emmett Williams,Ay-o,1998 George Maciunas was the founder and leader of a radical and experimental art movement of the 1960s known as Fluxus--which rejected traditional high art to practice an extraordinary form of anti-art. Maciunas attempted to rule Fluxus in totalitarian fashion, yet he laughed at himself and called forth laughter in others. This biography reveals the story of an unorthodox, contradictory, and elusive genius. 107 illustrations.

War of the Beasts and the Animals Maria Stepanova, 2021-03-25 First full English translation of the poetry of Maria Stepanova, one of Russia's most innovative and exciting poets and thinkers.

**The Sixth Station** Linda Stasi, 2013-12-01 Some say Demiel ben Yusef is the world's most dangerous terrorist, personally responsible for bombings and riots that have claimed the lives of thousands. Others insist he is a man of peace, a miracle worker, and possibly even the Son of God. His trial in New York City for crimes against humanity attracts scores of protestors, as well as media and religious leaders from around the world. Cynical reporter Alessandra Russo heads to the UN hoping for a piece of the action, but soon becomes entangled in controversy and suspicion when ben Yusef singles her out for attention among all other reporters. As Alessandra begins digging into ben Yusef's past, she is already in more danger than she knows—and when she is falsely accused of murder during her investigation, she is forced to flee New York. On the run from unknown enemies, Alessandra finds herself on the trail of a global conspiracy and a story that could shake the world to its foundations. Is Demiel ben Yusef the Second Coming or the Antichrist? The truth may lie in the secret history of the Holy Family, a group of Templars who defied the church, and a mysterious relic stained with the sacred blood of Christ Himself.
