Storm from the East Robert Marshall,1993-01-01 Traces the history of the Mongol Empire under Genghis Khan and his descendants, describes their military successes, and discusses the Mongol influence on Europe

Preparing for sand and dust storm contingency planning with herding communities Food and Agriculture Organization of the United Nations,2023-11-14 This report outlines the conceptual framework for sand and dust storms (SDS) hazard risk and vulnerability assessment and mapping in agriculture and provides the elements as part of SDS contingency planning process in agriculture in Mongolia. Its main purpose is to provide an applicable procedure to reduce SDS risk and impacts on agriculture. This is the first attempt to develop a contingency plan for SDS risk reduction in agriculture. It includes a set of agriculture-specific indicators proposed to assess SDS risk and discusses the required steps for developing indicators and procedures. Furthermore, a methodology for SDS contingency planning in agriculture is described, including the legal and institutional frameworks in Mongolia relevant to SDS intervention as well as the organizational responsibilities for implementing the contingency plan. It reviews the main action areas and challenges to be addressed in SDS contingency planning in agriculture for two rural districts or soums (Saintsagaan soum of Dundgobi province and Zamyn-Uud soum of Dornogobi province). It provides an action framework for the identification and fine-tuning of SDS priority actions to be addressed and integrated into existing national and local SDS disaster risk reduction/management plans and/or sectoral development plans in Mongolia. Mongolia is highly impacted by sand and dust storms (SDS), particularly livestock herding. Reducing risks and mitigating the adverse effects of SDS on agriculture remains very important as the country is highly dependent on the sector. With climate change, it is expected that droughts and land use changes will increase the frequency and severity of SDS risks. Hence, urgent action is needed, whereby short-term responses are required to be linked to long-term development actions for building resilience against SDS.

Where the Winds Meet Mi-hwa Joo,2015-08 This is the story of a wind that wanders over Mongolia, a country that is well known for its deserts and grasslands. Travel with the wind and discover traditional Mongolian life.

*Physics and Modelling of Wind Erosion* Yaping Shao,2008-10-13 Wind erosion occurs in many arid, semiarid and agricultural areas of the world. It is an environmental process influenced by geological and climatic variations as well as human activities. In general, wind erosion leads to land degradation in agricultural areas and has a negative impact on air quality. Dust emission generated by wind erosion is the largest source of aerosols which directly or indirectly influence the atmospheric radiation balance and hence global climatic variations. Strong wind-erosion events, such as severe dust storms, may threaten human lives and cause substantial economic damage. The physics of wind erosion is complex, as it involves atmospheric, soil and land-surface processes. The research on wind erosion is multidisciplinary, covering meteorology, fluid dynamics, soil physics, colloidal science, surface soil hydrology, ecology, etc. Several excellent books have already been written about the topic, for instance, by Bagnold (1941, *The Physics of Blown Sand and Desert Dunes*), Greeley and Iversen (1985, *Wind as a Geological Process on Earth, Mars, Venus and Titan*), Pye (1987, *Aeolian Dust and Dust Deposits*), Pye and Tsoar (1990, *Aeolian Sand and Sand Dunes*). However, considerable progress has been made in wind-erosion research in recent years and there is a need to systematically document this progress in a new book.

Storm from the East Robert Marshall,2022-06-13 The greatest conquest in history Genghis Khan left an empire more than twice the size of Alexander's: his successors went on to conquer and govern an area stretching from Korea to the River Danube. How did a band of nomadic herdsman achieve so much, so fast? Despite these stunning achievements, many writers dismiss the Mongols as just ferocious barbarians. This bestselling book sets the record straight. The epic starts in 1206 - when Genghis became master of 'all the people with felt tents' and an unknown tribe took the first steps towards world domination - and ends with the empire's decline and fall, after Khubilai Khan's triumphant unification with China. Robert Marshall describes their devastating invasions, including that of feudal Europe and Christendom's clumsy attempts to understand and fend off these legendary warriors. Full of extraordinary events, painted on a vast and colourful canvas, *Storm from the East* brings to life a time when East and West finally came face to face and the contours of modern Asia were set. 'Storm from the East does not seek to excuse Mongol excesses - yet Robert Marshall appears to speak for the Mongols... A fascinating voyage through time and space' Thomas Nivison Haining in the *Journal of the Royal Asiatic Society*

**The Storm Leopards** Holly Webb,2021-09-14 In this latest installment of the exciting Winter Journeys series, Isabelle catches a glimpse of the elusive snow leopard at the zoo and is magically transported to Mongolia to help a snow leopard family in danger. Includes black-and-white illustrations, a glossary, and further information about Mongolia, its people, and their commitment to protect snow leopards. When Isabelle and her family go to the zoo, she is the only one to catch a glimpse of the elusive snow leopard. She is fascinated by the animal and wants to learn all about it. One night, she wakes up to find herself in Mongolia, where snow leopards live. She meets a girl her age, and the two begin an exciting adventure to save a snow leopard and her two young cubs. But can the girls protect the beautiful cats from the hunters who are looking for them? Includes a glossary and additional material at the end of the book about Mongolia, its people, and their commitment to protect snow leopards.

*Paleoclimatology and Paleometeorology: Modern and Past Patterns of Global Atmospheric Transport* Margaret Leinen, Michael Sarnthein,2012-12-06 The NATO Advanced Research Workshop on Paleoclimatology and Paleometeorology: Modern and Past Patterns of Global Atmospheric Transport (held at Oracle, Arizona, USA from November 17-19, 1987) brought together atmospheric chemists, physicists, and meteorologists who study the origin and transport of modern-day mineral and biological aerosols with geologists and paleobotanists who study the sedimentary record of eolian and hydrologic processes along with modelers who study and conceptualize the processes influencing atmospheric transport at present and in the past. Presentations at the workshop provided a guide to our present knowledge of the entire spectrum of processes and phenomena important to the generation, transport, and deposition of eolian terrigenous material that ultimately becomes part of the geologic record and the modeling techniques that used to represent these processes. The presentations on the geologic record of eolian deposition documented our present understanding of the nature and causes of climate change on time scales of the last glacial ages (tens of thousands of years) to time scales over which the arrangement of continents, mountains, and oceans has changed substantially (tens of millions of years). There has been a growing recognition of the importance of global climatic changes to the future well-being of humanity. In particular, the climatic response to human alterations to the earth's surface and chemical composition has led to concern over the agricultural, ecological, and societal impacts of such potential global changes.

Sand and dust storms Food and Agriculture Organization of the United Nations,2023-11-14 Sand and dust storms

(SDS) are common in drylands with dust often transported over great distances, frequently across international boundaries. Such storms are important for ecosystem functioning, but they also create numerous hazards to society, in agriculture and other socioeconomic sectors. The yields and productivity of crops, trees, pastures and livestock are adversely affected by SDS. With climate change it is expected that droughts and land use changes will increase the frequency and risk of SDS. While agriculture is a major driver of SDS, agriculture is impacted by SDS and it is also part of the solution to combat SDS risks and mitigate their impacts. This guide aims to provide an overview of sand and dust storms and the impacts on agriculture and food systems. It gives a review of how agriculture can create SDS sources and highlights the impacts of SDS on agricultural production in source and deposition areas. It includes a range of high-impact, location- and context-specific practices to reduce SDS source and impacts on agriculture subsectors at local level, comprising technical and non-technical interventions. Moreover, it assesses how SDS risk is addressed at the policy level and discusses options for integrating SDS at national and regional levels into multi-hazard disaster risk reduction (DRR) and disaster risk management (DRM) strategies or sectoral development programmes, followed by conclusions and recommendations. Urgent action must be taken now. Short-term responses need to be linked to long-term development actions to enhance combating SDS. The adverse impacts of SDS are likely to become even more severe in the future, particularly due to climate change, unless appropriate interventions are made.

**Climate Hazard Crises in Asian Societies and Environments** Troy Sternberg, 2017-01-20 Climate hazards are the world's most widespread, deadliest and costliest natural disasters. Knowledge of climate hazard dynamics is critical since the impacts of climate change, population growth, development projects and migration affect both the impact and severity of disasters. Current global events highlight how hazards can lead to significant financial losses, increased mortality rates and political instability. This book examines climate hazard crises in contemporary Asia, identifying how hazards from the Middle East through South and Central Asia and China have the power to reshape our globalised world. In an era of changing climates, knowledge of hazard dynamics is essential to mitigating disasters and strengthening livelihoods and societies across Asia. By integrating human exposure to climate factors and disaster episodes, the book explores the environmental forces that drive disasters and their social implications. Focusing on a range of Asian countries, landscapes and themes, the chapters address several scales (province, national, regional), different hazards (drought, flood, temperature, storms, dust), environments (desert, temperate, mountain, coastal) and issues (vulnerability, development, management, politics) to present a diverse, comprehensive evaluation of climate hazards in Asia. This book offers an understanding of the challenges climate hazards present, their critical nature and the effort needed to mitigate climate hazards in 21st-century Asia. Climate Hazard Crises in Asian Societies and Environments is vital reading for those interested and engaged in Asia's development and well-being today and will be of interest to those working in Geography, Development Studies, Environmental Sciences, Sociology and Political Science.

**Tramps in Dark Mongolia** John Hedley, 1910

**Polluted Earth** Alexander Gates, 2023-03-13 POLLUTED EARTH A fresh and engaging introduction to the science behind pollution disasters for science and non-science majors Coming generations will have to reckon with a growing number of environmental challenges, whether caused by climate change, population growth or industrial production. Polluted Earth: The Science of the Earth's Environment combines the best features of a textbook and a popular science book. It retains the organization needed for a course while adopting a highly illustrative style that is mirrored in a multitude of case studies: short, self-contained and well-illustrated stories of well-known pollution disasters that are highly engaging for both science and non-science majors, from the historic Black Sunday dust storm in the midwestern United States to the more recent Deepwater Horizon spill in the Gulf of Mexico. From the very start, it also introduces the concept of environmental justice that ties pollution to economic and social life, bringing its subject into the world of the reader in an unprecedented way. Polluted Earth readers will also find: Well-known case studies including the Great London smog, the Pacific Gas and Electric case (made famous by Erin Brockovitch), the Exxon Valdez, and more Detailed illustrations showing the spatial and temporal relations of various pollution sources Modern technological solutions already in use by environmental industries A comprehensive list of pollutants, their health & environmental impact and their regulated exposure limits With its fresh and engaging style, Polluted Earth is an ideal introduction to the concepts, tasks and challenges of environmental science for undergraduate students of all disciplines.

**Arid Land Systems: Sciences and Societies** Troy Sternberg, Ariell Ahearn, 2019-08-19 Understanding deserts and drylands is essential, as arid landscapes cover >40% of the Earth and are home to two billion people. Today's problematic environment-human interaction needs contemporary knowledge to address dryland complexity. Physical dimensions in arid zones-land systems, climate and hazards, ecology-are linked with social processes that directly impact drylands, such as land management, livelihoods, and development. The challenges require integrated research that identifies systemic drivers across global arid regions. Measurement and monitoring, field investigation, remote sensing, and data analysis are effective tools to investigate natural dynamics. Equally, inquiry into how policy and practice affect landscape sustainability is key to mitigating detrimental activity in deserts. Relations between socio-economic forces and degradation, agro-pastoral rangeland use, drought and disaster and resource extraction reflect land interactions. Contemporary themes of food security, conflict, and conservation are interlinked in arid environments. This book unifies desert science, arid environments, and dryland development. The chapters identify land dynamics, address system risks and delineate human functions through original research in arid zones. Mixed methodologies highlight the vital links between social and environmental science in global deserts. The book engages with today's topical themes and presents novel analyses of arid land systems and societies.

**Climate Risk and Resilience in China** Rebecca Nadin, Sarah Opitz-Stapleton, Xu Yinlong, 2015-10-14 China has been subject to floods, droughts and heat waves for millennia; these hazards are not new. What is new is how rapidly climate risks are changing for different groups of people and sectors. This is due to the unprecedented rates of socio-economic development, migration, land-use change, pollution and urbanisation, all occurring alongside increasingly more intense and frequent weather hazards and shifting seasons. China's leadership is facing a significant challenge - from conducting and integrating biophysical and social vulnerability and risk assessments and connecting the information from these to policy priorities and time frames, to developing and implementing policies and actions at a variety of scales. It is within this challenging context that China's policy makers, businesses and citizens must manage climate risk and build resilience. This book provides a detailed study of how China has been working to understand and respond to climatic risk, such as droughts and desertification in the

grasslands of Inner Mongolia to deadly typhoons in the mega-cities of the Pearl River Delta. Using research and data from a wide range of Chinese sources and the Adapting to Climate Change in China (ACCC) project, a research-to-policy project, this book provides a fascinating glimpse into how China is developing policies and approaches to manage the risks and opportunities presented by climate change. This book will be of interest to those studying global and Chinese climate change policy, regional food, water and climate risk, and to policy advisors.

*Historical Dictionary of Mongolia* Alan J. K. Sanders,2017-08-25 This fourth edition of Historical Dictionary of Mongolia covers the people and organizations that brought Mongolia from revolution and oppression to independence and democracy, and its current unprecedented level of national wealth and international growth. This is done through a chronology, an introduction, appendixes, and an extensive bibliography. The dictionary section has over 1,200 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture. This book is an excellent resource for students, researchers, and anyone wanting to know more about Mongolia.

*The Modern History of Mongolia* Charles R. Bawden,2013-10-28 First published in 2004. The Mongols are one of the great peoples in the history of High Asia. Their name has been familiar over the whole of the old world for close on eight hundred years. Yet at the most generous estimate it would be anachronistic to speak of a Mongol state, in the modern sense of the word, as existing before the end of 1911. The imperial adventure under Genghis Khan and his successors left the Mongols exhausted and disunited politically, and in the seventeenth century they fell, piecemeal, under Manchu domination which continued for over two hundred years. This study looks at the Mongol society as it was during the comparatively static two centuries between the final submission to the Manchus in 1691 and the national revolution of 1911. The second part of the book describes the dynamic course of events since that revolution and more especially since the second, Soviet-inspired, revolution which began in 1921.
