*Parallel Algorithms* M H Alsuwaiyel,2022-05-30 This book is an introduction to the field of parallel algorithms and the underpinning techniques to realize the parallelization. The emphasis is on designing algorithms within the timeless and abstracted context of a high-level programming language. The focus of the presentation is on practical applications of the algorithm design using different models of parallel computation. Each model is illustrated by providing an adequate number of algorithms to solve some problems that quite often arise in many applications in science and engineering. The book is largely self-contained, presuming no special knowledge of parallel computers or particular mathematics. In addition, the solutions to all exercises are included at the end of each chapter. The book is intended as a text in the field of the design and analysis of parallel algorithms. It includes adequate material for a course in parallel algorithms at both undergraduate and graduate levels.

**An Eden of Sorts: The Natural History of My Feral Garden** John Hanson Mitchell,2014-08-04 Twenty-five years ago John Hanson Mitchell cut down a 1 1/2-acre stand of seventy-five-year-old white pines and planted a garden in their place. An Eden of Sorts is a history of the plants and animals that lived on the tract over the next decades. In a survey he made before taking down the pines, Mitchell counted no more than five or six flowering plants and shrubs. Over the years he created a series of fanciful garden "rooms" in the Italian style. Now, in addition to an intriguing garden of earthly delights, he has recorded more than one thousand species of plants and animals on the property. This is a paradoxical yet hopeful narrative of what can happen to a plot of land when it is properly managed.

*PARALLEL AND DISTRIBUTED COMPUTING : ARCHITECTURES AND ALGORITHMS* BASU, S. K. ,2016-01-02 This concise text is designed to present the recent advances in parallel and distributed architectures and algorithms within an integrated framework. Beginning with an introduction to the basic concepts, the book goes on discussing the basic methods of parallelism exploitation in computation through vector processing, super scalar and VLIW processing, array processing, associative processing, systolic algorithms, and dataflow computation. After introducing interconnection networks, it discusses parallel algorithms for sorting, Fourier transform, matrix algebra, and graph theory. The second part focuses on basics and selected theoretical issues of distributed processing. Architectures and algorithms have been dealt in an integrated way throughout the book. The last chapter focuses on the different paradigms and issues of high performance computing making the reading more interesting. This book is meant for the senior level undergraduate and postgraduate students of computer science and engineering, and information technology. The book is also useful for the postgraduate students of computer science and computer application.

**Common Threads** Adele Flood,2014-10-16 Common Threads explores ideas of artistic identity and memory contained within the narrated stories of ten textile artists. It reveals how individuals bring a sense of linearity to fragments of memory and create a cohesive sense of self through telling their life's story. By employing a systems model, the author constructs new ideas of interrogating identity and art practice. The model, "Constructing Personal Narratives", brings into focus the hermeneutic circle of learning, and identifies the importance and need to provide opportunities for lifelong learning. The stories told by the participants who returned to the formal education sector later in life reveal the profound effects adult learning had upon their lives. The writer reveals how the model generated the interview questions that provided the rich biographical content that emerged within dialogues. The common threads of experience and feelings of the ten participants and the author are revealed, and from these emerge deepened understandings of both the place of stories within our lives and how stories can further an understanding of what it means to be an artist. Emerging from these stories are implications for teaching practice; these are presented as observations and questions in terms of how educators should be part of the learning experience with those they educate.

**The Ark's Anniversary** Gerald Durrell,2017-02-21 The conservationist whose work inspired Masterpiece production The Durrells in Corfu recounts the early years of the Durrell Wildlife Park. At the age of six, Gerald Durrell confidently told his mother he would one day have his own zoo. She told him it was a lovely idea and promptly forgot all about it. But the young naturalist's passion wasn't about to fade away any time soon. Written for the Durrell Wildlife Park's twenty-fifth anniversary, The Ark's Anniversary is the unconventional story of how one man's dream was transformed into the esteemed organization known today as the Durrell Wildlife Conservation Trust, dedicated to saving endangered species from extinction. In the beginning, everyone thought Durrell was crazy to place a zoo on the island of Jersey in the English Channel. But that didn't stop people from coming to see him and

his menagerie of rare and exotic animals, including celebrities like Richard Adams, Princess Grace, David Niven (who presided over the wedding of two apes), and Princess Anne (who wrote the foreword to this book). The Ark’s Anniversary is a delightful journey and a celebration of success for anyone who loves the natural world. This ebook features an illustrated biography of Gerald Durrell including rare photos from the author’s estate.
