Everyday Arias Paul Atkinson,2006-02-27 Paul Atkinson explores the remarkable world of opera through his fieldwork with the internationally known Welsh National Opera company. He demonstrates how cultural phenomena are produced and enacted by taking us on stage and behind the scenes into the collective social action that goes into the realization of an opera. Atkinson's work will appeal to anthropologists and sociologists who study the performance arts, as well as to those engaged in theatre arts, opera, and music.

Sorting Hosam M. Mahmoud,2011-10-14 A cutting-edge look at the emerging distributional theory of sorting Research on distributions associated with sorting algorithms has grown dramatically over the last few decades, spawning many exact and limiting distributions of complexity measures for many sorting algorithms. Yet much of this information has been scattered in disparate and highly specialized sources throughout the literature. In *Sorting: A Distribution Theory*, leading authority Hosam Mahmoud compiles, consolidates, and clarifies the large volume of available research, providing a much-needed, comprehensive treatment of the entire emerging distributional theory of sorting. Mahmoud carefully constructs a logical framework for the analysis of all standard sorting algorithms, focusing on the development of the probability distributions associated with the algorithms, as well as other issues in probability theory such as measures of concentration and rates of convergence. With an emphasis on narrative rather than technical explanations, this exceptionally well-written book makes new results easily accessible to a broad spectrum of readers, including computer professionals, scientists, mathematicians, and engineers. *Sorting: A Distribution Theory*: * Contains introductory material on complete and partial sorting * Explains insertion sort, quick sort, and merge sort, among other methods * Offers verbal descriptions of the mechanics of the algorithms as well as the necessary code * Illustrates the distribution theory of sorting using a broad array of both classical and modern techniques * Features a variety of end-of-chapter exercises

International Handbook of Research in Professional and Practice-based Learning Stephen Billett,Christian Harteis,Hans

Gruber,2014-07-15 The *International Handbook of Research in Professional and Practice-based Learning* discusses what constitutes professionalism, examines the concepts and practices of professional and practice-based learning, including associated research traditions and educational provisions. It also explores professional learning in institutions of higher and vocational education as well the practice settings where professionals work and learn, focusing on both initial and ongoing development and how that learning is assessed. The Handbook features research from expert contributors in education, studies of the professions, and accounts of research methodologies from a range of informing disciplines. It is organized in two parts. The first part sets out conceptions of professionalism at work, how professions, work and learning can be understood, and examines the kinds of institutional practices organized for developing occupational capacities. The second part focuses on procedural issues associated with learning for and through professional practice, and how assessment of professional capacities might progress. The key premise of this Handbook is that during both initial and ongoing professional development, individual learning processes are influenced and shaped through their professional environment and practices. Moreover, in turn, the practice and processes of learning through practice are shaped by their development, all of which are required to be understood through a range of research orientations, methods and findings. This Handbook will appeal to academics working in fields of professional practice, including those who are concerned about developing these capacities in their students. In addition, students and research students will also find this Handbook a key reference resource to the field.

Catholic Schools and the Future of the Church Kathleen Engebretson,2014-02-27 During the first decade of the 21st century the Catholic Church in the developed world has faced a decline in its moral authority, increasing accusations of irrelevance to a secular age, and a steep and steady decline in commitment among successive generations from the 1960s on. Despite this Catholic schools have multiplied and grown in popularity and educational achievement. The book sets out a programme for the contribution of Catholic schools to the future of the Church, covering such topics as the religious education curriculum in its cognitive and affective aspects, the sacramental life of the school, selection of staff, the issue of staff and Catholic witness and many other topics. Engebretson argues that Catholic schools are a powerful key to the future of the Church and shows how, within their diversity, Catholic schools can be ecclesial communities, which have at their heart the building up of the Church.

Changing Health Care Systems and Rheumatic Disease Institute of Medicine,Committee on Changing Health Care Systems and Rheumatic Disease,1997-02-09 Market forces are driving a radical restructuring of health care delivery in the United States. At the same time, more and more people are living comparatively long lives with a variety of severe chronic health conditions. Many such people are concerned about the trend toward the creation of managed care systems because their need for frequent, often complex, medical services conflicts with managed care's desires to contain costs. The fear is that people with serious chronic disorders will be excluded from or underserved by the integrated health care delivery networks now emerging. Responding to a request from the National Institute of Arthritis and Musculoskeletal and Skin Diseases, this book reflects the results of a workshop that focused on the following questions: Does the model of managed care or an integrated delivery system influence the types of interventions provided to patients with chronic conditions and the clinical and health status outcomes resulting from those interventions? If so, are these effects quantitatively and clinically significant, as compared to the effects that other variables (e.g., income, education, ethnicity) have on patient outcomes? If the type of health care delivery system appears to be related to patient care and outcomes, can specific organizational, financial, or other variables be identified that account for the relationships? If not, what type of research should be pursued to provide the information needed about the relationship between types of health care systems and the processes and outcomes of care provided to people with serious chronic conditions?
