Making Space Melissa K. Byrnes, 2024 Since the 2005 urban protests in France, public debate has often centered on questions of how the country has managed its relationship with its North African citizens and residents. In *Making Space* Melissa K. Byrnes considers how four French suburbs near Paris and Lyon reacted to rapidly growing populations of North Africans, especially Algerians before, during, and after the Algerian War. In particular, Byrnes investigates what motivated local actors such as municipal officials, regional authorities, employers, and others to become involved in debates over migrants' rights and welfare, and the wide variety of strategies community leaders developed in response to the migrants' presence. An examination of the ways local policies and attitudes formed and re-formed communities offers a deeper understanding of the decisions that led to the current tensions in French society and questions about France's ability—and will—to fulfill the promise of liberty, equality, and fraternity for all of its citizens. Byrnes uses local experiences to contradict a version of French migration history that reads the urban unrest of recent years as preordained.

Preserving Digital Materials Ross Harvey, Jaye Weatherburn, 2018-03-02 The third edition of *Preserving Digital Materials* provides a survey of the digital preservation landscape. This book is structured around four questions: 1. Why do we preserve digital materials? 2. What digital materials do we preserve? 3. How do we preserve digital materials? 4. How do we manage digital preservation? This is a concise handbook and reference for a wide range of stakeholders who need to understand how preservation works in the digital world. It notes the increasing importance of the role of new stakeholders and the general public in digital preservation. It can be used as both a textbook for teaching digital preservation and as a guide for the many stakeholders who engage in digital preservation. Its synthesis of current information, research, and perspectives about digital preservation from a wide range of sources across many areas of practice makes it of interest to all who are concerned with digital preservation. It will be of use to preservation administrators and managers, who want a professional reference text, information professionals, who wish to reflect on the issues that digital preservation raises in their professional practice, and students in the field of digital preservation.

Humoral Immunity in Kidney Transplantation Giuseppe Remuzzi, Stefano Chiaramonte, N. Perico, C. Ronco, 2009 As recent advances in immunosuppression and apheresis techniques have opened new avenues for the management of humoral immunity, interest in ABO-incompatible kidney transplantation has been renewed. Moreover, new screening techniques ' such as the single antigen bead assay ' allow for the detection and definition of very low levels of alloantibody, which has had a positive impact on the treatment possibilities in highly sensitized adult patients with end-stage renal disease. But despite these advances, a theoretical rationale is still missing for both the decision to transplant a sensitized patient and the classification of the transplant as low, medium or high risk. There is also no uniform approach with regard to pre-transplant desensitization protocols, and it is unclear whether particular post-transplant immunosuppression will be required and what would be the best combination treatment. Last but not least, the frequency and actual clinical impact of alloantibodies developed after transplantation on short- and long-term graft survival need to be ascertained. Aimed especially at the clinician, this publication presents recent insights in the characterization and pathogenetic role of humoral immunity in chronic allograft injury and investigates the perspectives for novel immunosuppressive therapies to control antibody production after transplantation.

Infant Mortality: A Continuing Social Problem Eilidh Garrett, Chris Galley, Nicola Shelton, Robert Woods, 2018-02-06 In 1906, Sir George Newman's 'Infant Mortality: A Social Problem', one of the most important health studies of the twentieth century, was published. To commemorate this anniversary, this volume brings together an interdisciplinary team of leading academics to evaluate Newman's critical contribution, to review current understandings of the history of infant and early childhood mortality, especially in Britain, and to discuss modern approaches to infant health as a continuing social problem. The volume argues that, even after 100 years of health programmes, scientific advances and medical interventions, early childhood mortality is

still a significant social problem and it also proposes new ways of defining and tracking the problem of persistent mortality differentials.

Xenobiotics in the Urban Water Cycle Despo Fatta-Kassinou, Kai Bester, Klaus Kümmerer, 2010-01-06 The history of chemistry and pharmaceutical sciences is an impressive success story. The products of chemical and pharmaceutical industries are present everywhere in our everyday life. They help to pursue the modern way of living and they contribute to our high standard of living and safety, mobility, communication technologies, food, health,

textiles and drinking water treatment, among many others. These products are labeled under the categories: pharmaceuticals, pesticides, detergents, fertilizers, dyes, paints, preservatives, food additives and personal care products, to name a few. Within these categories, groups of chemicals with similar structures can be found. However, often groups of chemicals with very different structures belong to the same category. For a long time the production of chemicals and pharmaceuticals, their usage and application was connected with the heavy pollution of the environment and serious health effects. At the end of the last century, it was realised that the products of chemical and pharmaceutical industries are presenting a new type of environmental pollution that may also pose a health risk to the consumer. Most chemicals are used in so-called open applications in excessive amounts e. g. for personal care, hygiene, plant protection, health and in textiles. In many cases such as scents, detergents, textile chemicals, surface disinfectants, pesticides and others it is unavoidable that these chemicals are released into the environment according to their intended use.

Connect Julian Gough, 2019-07-02 In the Nevada desert, in the near future, a brilliant biologist and single mother named Naomi Chiang sets off a chain reaction that threatens to bring the networked world to its knees. When her seventeen-year-old son, Colt, who spends most of his time in the comfort of virtual reality, secretly releases her latest findings—a process for regrowing human tissue—Colt's estranged father crashes into their lives again, backed by the secretive security organization he heads. The U.S. government wants Naomi's research . . . and her son, who must leave the virtual sphere to discover the pleasures—and pains—of a life fully lived. Page-turning and thought-provoking, *Connect* is a whip-smart novel that explores what connection—both human and otherwise—might be in a digital age. It is a story of mothers and sons; but it is also about you, your phone, and the world to come.

Bases Abroad Robert E. Harkavy, 1989 Analyzing the modern status of military bases and the diplomacy that defines their location and access, this book explores the global basing networks of the world's major military powers—their type, location, and the politics and economics of their acquisition. It provides data on armaments, intelligence, communications, research, and space facilities; tables and maps that display U.S. and Soviet global networks; and the various military roles and nuclear deterrence capabilities for global power projection and support of client states in the Third World. Harkavy also discusses emerging political and technological developments that could alter basing diplomacy.

Digital Preservation in Libraries Jeremy Myntti, Jessalyn Zoom, 2019-07-03 In today's information landscape, there are fewer topics that more

urgently demand expansive discourse than digital preservation, which touches on everything from technology to copyright. The Association for Library Collections and Technical Services (ALCTS) steps up to the challenge with this comprehensive overview. Global in scope, it features case studies and contributions that discuss such key issues as the history of digital preservation; digital preservation and information ethics; strategies for getting started, sustaining digitization programs, and performing evaluation; fine-tuning digital preservation workflows, with a look at Digital Streams Matrix for analyzing pathways and tasks; preserving e-books, mobile device data, and other specific types of materials; collaborative efforts in digital preservation, including jargon-free techniques for engaging non-technical colleagues in digital legacy tools and processes; and the copyright, legal, and administrative issues connected with digital preservation. Academic librarians, technical services staff, technologists, and administrators will all benefit from this incisive collection.
