**Looking Up** Matthew Cappucci,2022-08-02 An energetic and electrifying narrative about all things weather—by one of today's rising meteorological stars. Get in—we're going storm-chasing! Imagine a very cool weather nerd has just pulled up to you and yelled this out the window of his custom-built armored storm-chasing truck. The wind is whipping around, he's munching on Wawa, it's all very chaotic—yet as you look into his grinning face, you feel the greatest surge of adrenaline you have ever felt in your life. Hallelujah: your cavalry is here! Welcome to the brilliance of Looking Up, the lively new book from rising meteorology star Matthew Cappucci. He's a meteorologist for The Washington Post, and you might think of him as Doogie Howser meets Bill Paxton from Twister, with a dash of Leonardo DiCaprio from Catch Me If You Can. A self-proclaimed weather nerd, at the age of fourteen he talked his way into delivering a presentation on waterspouts at the American Meteorological Society's annual broadcast conference by fudging his age on the application and created his own major on weather science while an undergrad at Harvard. Combining reportage and accessible science with personal storytelling and infectious enthusiasm, Looking Up is a riveting ride through the state of our weather and a touching story about parents and mentors helping a budding scientist achieve his improbable dreams. Throughout, readers get a tutorial on the basics of weather science and the impact of the climate. As our country's leaders sound the alarm on climate change, few people have as close a view to how serious the situation actually is than those whose job is to follow the weather, which is the daily dose of climate we interact with and experience every day. The weather affects every aspect of our lives (even our art) as well as our future. The way we think about it requires a whole-life overhaul. Rain or shine, tropical storm or twister, Cappucci is here to help us begin the process. So get in his storm-chasing truck already, will ya?

Plato and the Nerd Edward Ashford Lee,2018-10-09 How humans and technology evolve together in a creative partnership. In this book, Edward Ashford Lee makes a bold claim: that the creators of digital technology have an unsurpassed medium for creativity. Technology has advanced to the point where progress seems limited not by physical constraints but the human imagination. Writing for both literate technologists and numerate humanists, Lee makes a case for engineering—creating technology—as a deeply intellectual and fundamentally creative process. Explaining why digital technology has been so transformative and so liberating, Lee argues that the real power of technology stems from its partnership with humans. Lee explores the ways that engineers use models and abstraction to build inventive artificial worlds and to give us things that we never dreamed of—for example, the ability to carry in our pockets everything humans have ever published. But he also attempts to counter the runaway enthusiasm of some technology boosters who claim everything in the physical world is a computation—that even such complex phenomena as human cognition are software operating on digital data. Lee argues that the evidence for this is weak, and the likelihood that nature has limited itself to processes that conform to today's notion of digital computation is remote. Lee goes on to argue that artificial intelligence's goal of reproducing human cognitive functions in computers vastly underestimates the potential of computers. In his view, technology is coevolving with humans. It augments our cognitive and physical capabilities while we nurture, develop, and propagate the technology itself. Complementarity is more likely than competition.

**Nerds** David Anderegg, 2011-03-03 A lively, thought-provoking book that zeros in on the timely issue of how anti-intellectualism is bad for our children and even worse for America. Why are our children so terrified to be called nerds? And what is the cost of this rising tide of anti-intellectualism to both our children and our nation? In *Nerds*, family psychotherapist and psychology professor David Anderegg examines why science and engineering have become socially poisonous disciplines, why adults wink at the derision of nerdy kids, and what we can do to prepare our children to succeed in an increasingly high-tech world. *Nerds* takes a measured look at how we think about and why we should rethink nerds, examining such topics as: - our anxiety about intense interest in things mechanical or technological; - the pathologizing of nerdy behavior with diagnoses such as Asperger syndrome; - the cycle of anti-nerd prejudice that took place after the Columbine incident; - why nerds are almost exclusively an American phenomenon; - the archetypal struggles of nerds and jocks in American popular culture and history; - the conformity of adolescents and why adolescent stereotypes linger into adulthood long after we should know better; and nerd cultural markers, particularly science fiction. Using education research, psychological theory, and interviews with nerdy and non-nerdy kids alike, Anderegg argues that we stand in dire need of turning around the big dumb ship of American society to prepare rising generations to compete in the global marketplace.
