The Male Factor in Human Infertility Diagnosis and Treatment W. Thompson,R.F. Harrison,J.

Bonnar,2012-12-06 This book is a compilation of edited papers which were presented at the XIth World Congress of Fertility and Sterility held in June 1983 in Dublin, Ireland. Although it has long been known that male factors are responsible in at least 30% of infertile couples only recently have concerted efforts been made on the part of urologists, gynaecologists and basic scientists to identify these factors more precisely. The nature of spermatogenesis is complex but application of various scientific methods have at last opened up new and promising approaches to our understanding of this subject. Clinical results however have been depressing; the majority of treatments lack realistic evaluation and are initiated in hope rather than with a sound scientific basis. We anticipate that this volume will in some small way correct these deficiencies. The papers have been grouped into related topics. The first section deals with the evaluation of the spermatozoa and includes a critical assessment of the recently introduced zona-free hamster egg test of sperm function. Further sections include the biochemistry of gonadal function and the immunology of male reproduction; most papers are concerned with studies in the human. The clinical sections cover medical and surgical approaches to treatment and the final section deals with various aspects of AID practice.

Frontiers in Reproductive Endocrinology and Infertility C. Ng,F.H.M. Tsakok,S.-L. Tan,K.-H.

Chan,2012-12-06 This book presenting the latest thinking on Reproductive Endocrinology and Infertility is truly international as the authors hail from no less than four different continents (North America, Europe, Australia and Asia). The idea for this book was conceived during the XII World Congress On Fertility and Sterility where the unique confluence of our distinguished authors occurred in Singapore in October 1986. The authors were involved in the Pre And Post Congress Scientific Programmes which we organised. The overwhelming success of the Congress and the Pre And Post Congress Scientific Programmes prompted this book so that those unable to attend the meeting will still be able to benefit from the vast range of topics covered. This book will be a valuable addition to the knowledge in Reproductive Endocrinology and Infertility and will be useful reading for those wishing to pursue this subspecialty. The authors are indebted to Lee Foundation (Singapore) for help in the publication of this book. We would also like to thank Miss Jam Siew Fong and Miss Tang May Mey for their excellent secretarial assistance. Singapore, January 1988 Charles SANG F H Maurine Tsakok S LTan K H Chan

Microscopic Images of Human Sperm, Oocytes and Embryos for Assisted Reproductive Technology Including Embryonic Stem Cells Professor Arunachalam Henry Sathananthan,2014-12-29 This Epub incorporates 37 years of embodied research at Monash & La Trobe Universities, Melbourne, by the author with his colleagues in Australia and overseas (England, Singapore, India, Sri Lanka, Italy & Japan).It is a multi-author, visual presentation of the microscopic structure of human oocytes, sperm and embryos in conjunction with clinical IVF and ART and includes embryonic stem cells, a logical extension of ART.Most of the images were taken with electron microscopes (TEM & SEM), light and phase microscopes (LM) and fluorescent microscopes (FM) with diagrams.Both published micrographs (from our atlases and journals) and also original unpublished micrographs are presented. The printed atlases were scanned and new material was provided on PPT, PDF & YouTube for EPub.The aim of this EPub is to make our research available online for clinicians, scientists & students and posterity. Through, Not Around Allison McDonald Ace,Caroline Starr,Ariel Ng Bourbonnais,2019-01-26 These stories, written by Canadians, paint a picture of what it's like to experience the emotional and physical facets of infertility, miscarriage, and pregnancy loss: the pain, sadness, desperation, hope, humour, frustration, and also the knowledge that while these issues are often out of our control, there is a way through them.

Male Reproduction and Fertility Andrés Negro-Vilar,1983

Confessions of a Human Sperm R.S. Jeyendran,2013-05-08 Throughout history, mankind has wondered about its origin - where he came from and how he got here. "Where did I come from?" is one of the first questions our own children ask us. But the real question should be 'What are

mankind's building blocks'? For posterity's sake, the answer is sperm! Rather than giving the female egg all the credit, as is usually the case, let's shine the light on this silent, unsung hero – the sperm – shall we? So to the question 'What came first, the chicken or the egg?' we can unequivocally state Who Cares! Because without sperm, there would be no question to ask now, would there? Being the author and merely a man, I thought it more apropos to go to an actual source for the truth. So to that end, I found one who will walk and talk you through all you need to know about sperm, including things you never knew were possible along with those amazing things you might have heard but wondered if they were really true. And even though you are a human and will be getting your story from a human sperm, s/he will even throw in tidbits about some of your animal friends for comparison purposes. So, come and meet the little guy who will tell you all you need to know.

Reproductive Biology of Bats Elizabeth G. Crichton,Philip H. Kruttsch,2000-06-12 The

Reproductive Biology of Bats presents the first comprehensive, in-depth review of the current knowledge and supporting literature concerning the behavior, anatomy, physiology and reproductive strategies of bats. These mammals, which occur world-wide and comprise a vast assemblage of species, have evolved unique and successful reproductive strategies through varied anatomical and physiological specialization. These are accompanied by individual and/or group behavioral interactions, usually in response to environmental mechanisms essential to their reproductive success. Is the first book devoted to the reproductive biology of bats Contains in-depth reviews of the literature concerned with bat reproduction Contributors are widely recognized specialists Provides a powerful database for future research

Reproductive and Developmental Toxicology Ramesh C. Gupta, 2011-04-04 Reproductive toxicology is a complex subject dealing with three components—parent, placenta, and fetus—and the continuous changes that occur in each. Reproductive and Developmental Toxicology is a comprehensive and authoritative resource providing the latest literature enriched with relevant references describing every aspect of this area of science. It addresses a broad range of topics including nanoparticles and radiation, gases and solvents, smoking, alcohol and drugs of abuse, food additives, nutraceuticals and pharmaceuticals, and metals, among others. With a special focus on placental toxicity, this book is the only available reference to connect the three key risk stages, and is the only resource to include reproductive and developmental toxicity in domestic animals, fish, and wildlife. Provides a complete, integrated source of information on the key risk stages during reproduction and development Includes coverage of emerging science such as stem cell application, toxicoproteomics, metabolomics, phthalates, infertility, teratogenicity, endocrine disruption, surveillance and regulatory considerations, and risk assessment Offers diverse and unique in vitro and in vivo toxicity models for reproductive and developmental toxicity testing in a user-friendly format that assists in comparative analysis

The Sperm Cell Christopher J. De Jonge, Christopher L. R. Barratt, 2017-05-25 This revised and updated second edition provides a comprehensive account of the human male gamete. Detailed overviews of human sperm production, maturation, and function - and how these processes affect and influence fertility, infertility, and assisted reproduction - are given. A wide range of new developments including proteomics, spermatogenesis, sperm-specific WW domain-binding proteins, Ca²⁺ signalling, DNA packaging, epididymis are explored, whilst a new chapter presents information gained from

mouse genetics, highlighting how it informs male fertility research. The impact of environmental factors during pre-pubertal and pubertal stages of life is also investigated. Featuring engaging prose with chapters organized topographically, *The Sperm Cell* remains an essential resource for andrologists, clinical scientists, and laboratory personnel.

Evaluation of a Novel 'carrier' Sperm Method for Improving the Yield of Human Sperm Cell DNA During Differential Extraction Analysis Constance Lansdale, 2022 Conventional differential extraction (DE) has been known to sacrifice percent yield and purity of sperm cell DNA due to the drastic variation in the quality of the separation (i.e., sperm cell retention) due to the multiple lysis, centrifugation, liquid transfer, and washing steps involved in the process. This method has also been shown to result in the loss of 94-98% of male sperm cells (Vuichard et al., 2011). Thus, over thirty years of research has been conducted to improve conventional DE, yet no new methods have been widely adopted despite their shown increase in speed, sensitivity, and accuracy. Like conventional DE, most of these new methods still sacrifice sperm cell DNA yield and purity which are two key criteria which should be considered. This lack of improvement in conventional DE methodology is a significant shortcoming of the forensic science community and is a major explanation why forensic crime laboratories are slow to adopt any new extraction method. Nevertheless, this research aimed to improve upon human sperm cell DNA retention in both the lysis and wash steps of an organic extraction methodology with the use of two separate 'carrier' sperm. This 'carrier' sperm, in the form of purified salmon sperm DNA or intact horse sperm cells, was meant to act as a barrier to human sperm cell loss during the extraction steps of the DNA analysis process and allow for an increased retention of human sperm cell DNA. However, increased retention was not demonstrated due to an overall quantitative decrease in human DNA (ng/ μ L) of those samples supplemented with 'carrier' sperm versus those samples of only human semen when using qPCR analysis. Thus, our hypotheses were not supported since this novel one-step modification to organic extraction demonstrated a negative advancement towards improving conventional differential extraction for forensic sexual assault casework.

Advances in Assisted Reproductive Technologies Z. BenRafael, Neri Laufer, Shlomo Mashiach, Joseph G. Schenker, 2012-12-06 The World Congress of In Vitro Fertilization and Alternate Assisted Reproduction, held in Jerusalem, Israel, 2-7 April, 1989, was the sixth in the sequence of these Congresses, but was the first to emphasize the major importance and the place of assisted reproductive technologies in the treatment of infertility. The eternal City of Jerusalem witnessed the

gathering of more than 1500 participants from all over the world who shared and exchanged knowledge and up-to-date experience in this ever-evolving field. The high quality scientific contributions to the Congress culminated in the publication of this Proceedings. It embraces all-important aspects in the field of in vitro fertilization and alternate assisted reproduction. Papers on controversies and diversities of methods to stimulate the ovaries, imaging techniques, basic research and state-of-the-art papers on ovarian physiology, the role of GnRH and its analog, clinical aspects of IVF treatment and cryopreservation, up-to-date techniques in assisted reproductive technologies that are quickly developing in conjunction with IVF, were included. When should IVF be preferable to surgery? What are the expected up-to-date world results and what are the psychological, moral, ethical and religious implications? These are all the concerns of the treating team and are addressed here. Male factor infertility remains a frustrating problem, but advances in the understanding of sperm-egg interaction, sperm evaluation and preparation are reported. Micromanipulation emerges as a possible alternative to bring some relief to this problem, but it also promises to be central in promoting the field of prenatal genetic analysis.
