Non-Retaliation in Early Jewish and New Testament Texts Gordon Zerbe, 1993-10-01

This study examines the varieties and continuities of ethical exhortations and ideals in the Jewish and Christian traditions (c. 200 BCE-100 CE) that fall under the rubric of non-retaliation. One of the principal conclusions of this thought-provoking work is that a critical factor in determining the shape of non-retaliatory ethics is whether the exhortation is applied to relations within the local and/or elect community or to relations with oppressors of the elect community. It becomes apparent also that the non-retaliatory ethic of the NT stands solidly in the tradition of non-retaliatory ethics in Early Judaism.

Lectures on Non-linear Plasma Kinetics Vadim N. Tsytovich, 2012-12-06 Lectures on Non-linear Plasma Kinetics is an introduction to modern non-linear plasma physics showing how many of the techniques of modern non-linear physics find applications in plasma physics and how, in turn, the results of this research find applications in astrophysics. Emphasis is given to explaining the physics of nonlinear processes and the radical change of cross-sections by collective effects. The author discusses new nonlinear phenomena involving the excitation of coherent nonlinear structures and the dynamics of their random motions in relation to new self-organization processes. He also gives a detailed description of applications of the general theory to various research fields, including the interaction of powerful radiation with matter, controlled thermonuclear research, etc.

The Non-designer's Design Book Robin Williams, 2015 A lot has happened in the world of digital design since the first edition of this title was published, but one thing remains true: There is an ever-growing number of people attempting to design everything from newsletters to advertisements with no formal training. This book is the one place they can turn to find quick, non-intimidating, excellent design help from trusted design instructor Robin Williams. This revised and expanded classic includes a new chapter on designing with type, more quizzes and exercises, updated projects, and new visual and typographic examples that give the book a fresh, modern look. In *The Non-Designer's Design Book*, 4th Edition, Robin turns her attention to the basic principles that govern good design. Perfect for beginners, Robin boils great design into four easy-to-master principles: contrast, repetition, alignment, and proximity (C.R.A.P.!). Readers who follow her clearly explained concepts will produce more sophisticated and professional work immediately. Humor-infused, jargon-free prose interspersed with design exercises, quizzes, and illustrations make learning a snap—which is just what audiences have come to expect from this bestselling author.

Negation in Non-Standard British English Lieselotte Anderwald, 2003-08-27 Despite the advances of radio and television and increasing mobility and urbanization, spoken

English is by no means becoming more like the written standard. English dialect grammar, however, is still a new and relatively undeveloped area of research, and most studies to date are either restricted regionally, or based on impressionistic statements. This book provides the first thorough empirical study of the field of non-standard negation across Great Britain.

Local Modelling of Non-Local Dependencies in Syntax Artemis Alexiadou, Tibor Kiss, Gereon Müller, 2013-01-01 Syntactic dependencies are often non-local: They can involve two positions in a syntactic structure whose correspondence cannot be captured by invoking concepts like minimal clause or predicate/argument structure. Relevant phenomena include long-distance movement, long-distance reflexivization, long-distance agreement, control, non-local deletion, long-distance case assignment, consecutio temporum, extended scope of negation, and semantic binding of pronouns. A recurring strategy pursued in many contemporary syntactic theories is to model cases of non-local dependencies in a strictly local way, by successively passing on the relevant information in small domains of syntactic structures. The present volume brings together eighteen articles that investigate non-local dependencies in movement, agreement, binding, scope, and deletion constructions from different theoretical backgrounds (among them versions of the Minimalist Program, HPSG, and Categorical Grammar), and based on evidence from a variety of typologically distinct languages. This way, advantages and disadvantages of local treatments of non-local dependencies become evident. Furthermore, it turns out that local analyses of non-local phenomena developed in different syntactic theories (spanning the derivational/declarative divide) often may not only share identical research questions but also rely on identical research strategies.

Covert Modality in Non-finite Contexts Rajesh Bhatt, 2006 Main description: This book investigates the distribution and interpretation of Covert Modality. Covert Modality is modality which we interpret but which is not associated with any lexical item in the structure that we are interpreting. The book analyzes a class of environments that involves covert modality e.g. infinitival questions, infinitival relative clauses, purpose clauses, the 'have to' construction, and the 'is to' construction.

The Puzzle of Non-Western Democracy Richard Youngs, 2015-09-08 Western democracy is being questioned around the world. At the same time, Western aid groups are quick to say that they are not trying to impose a particular style of democracy on others and that they are open to supporting local, alternative forms of democracy. This book examines what it is about Western democracy that non-Westerners are reacting negatively to and whether the critics often are equating a dislike for certain Western social or economic features with an aversion to of Western political systems. It also explores the current state of debate about alternative forms of democratic practice in different regions—Asia, Africa, the Middle East, and Latin America—and then puts forward ideas about how Western actors engaged in democracy support can do a better job of incorporating new thinking about alternative democratic forms into their efforts.

Non-Instantaneous Impulses in Differential Equations Ravi Agarwal, Snezhana Hristova, Donal O'Regan, 2017-10-27 This monograph is the first published book devoted to the theory of differential equations with non-instantaneous impulses. It aims to equip the reader with mathematical models and theory behind real life processes in physics, biology, population dynamics, ecology and pharmacokinetics. The authors examine a wide scope of differential equations with non-instantaneous impulses through three comprehensive chapters, providing an all-rounded and unique presentation on the topic, including: - Ordinary differential equations with non-instantaneous impulses (scalar and n-dimensional case)- Fractional differential equations with non-instantaneous impulses (with Caputo

fractional derivatives of order $q \in (0, 1)$ - Ordinary differential equations with non-instantaneous impulses occurring at random moments (with exponential, Erlang, or Gamma distribution) Each chapter focuses on theory, proofs and examples, and contains numerous graphs to enrich the reader's understanding. Additionally, a carefully selected bibliography is included. Graduate students at various levels as well as researchers in differential equations and related fields will find this a valuable resource of both introductory and advanced material.

Non-equilibrium Thermodynamics and Physical Kinetics Halid Bikkin,Igor I. Lyapilin,2021-08-02 This graduate textbook covers contemporary directions of non-equilibrium statistical mechanics as well as classical methods of kinetics. Non-Stationary Electromagnetics Alexander Nerukh,Trevor Benson,2018-10-26 This book is devoted to the investigations of non-stationary electromagnetic processes. The investigations are undertaken analytically mainly using the Volterra integral equations approach. The book contains a systematic statement of this approach for the investigations of electrodynamics phenomena in the time domain and new results and applications in microwave techniques and photonics. Particular consideration is given to electromagnetic transients in time-varying media and their potential applications. The approach is formulated and electromagnetic phenomena are investigated in detail for a hollow metal waveguide, which contains moving dielectric or plasma-bounded medium, and dielectric waveguides with time-varying medium inside a core.

Rhetoric at the Non-Substantialistic Turn Therese Boos Dykeman,2018-05-04 This book formulates a theory of global rhetoric encompassing Eastern and Western approaches. Based on the Field-Being philosophy, this book delves into the ontological foundations of both kinds of rhetoric and argues that both understandings are necessary for global communication.

Non-Equilibrium Reacting Gas Flows Ekaterina Nagnibeda,Elena Kustova,2009-07-09 In the present monograph, we develop the kinetic theory of transport phenomena and relaxation processes in the flows of reacting gas mixtures and discuss its applications to strongly non-equilibrium conditions. The main attention is focused on the influence of non-equilibrium kinetics on gas dynamics and transport properties. Closed systems of fluid dynamic equations are derived from the kinetic equations in different approaches. We consider the most accurate approach taking into account the state-to-state kinetics in a flow, as well as simplified multi-temperature and one-temperature models based on quasi-stationary distributions. Within these approaches, we propose the algorithms for the calculation of the transport coefficients and rate coefficients of chemical reactions and energy exchanges in non-equilibrium flows; the developed techniques are based on the fundamental kinetic theory principles. The theory is applied to the modeling of non-equilibrium flows behind strong shock waves, in the boundary layer, and in nozzles. The comparison of the results obtained within the frame of different approaches is presented, the advantages of the new state-to-state kinetic model are discussed, and the limits of validity for simplified models are established. The book can be interesting for scientists and graduate students working on physical gas dynamics, aerothermodynamics, heat and mass transfer, non-equilibrium physical-chemical kinetics, and kinetic theory of gases.

The Creation of Strange Non-Chaotic Attractors in Non-Smooth Saddle-Node Bifurcations Tobias H. J ger,2009-08-07 The author proposes a general mechanism by which strange non-chaotic attractors (SNA) are created during the collision of invariant curves in quasiperiodically forced systems. This mechanism, and its implementation in

different models, is first discussed on an heuristic level and by means of simulations. In the considered examples, a stable and an unstable invariant circle undergo a saddle-node bifurcation, but instead of a neutral invariant curve there exists a strange non-chaotic attractor-repeller pair at the bifurcation point. This process is accompanied by a very characteristic behaviour of the invariant curves prior to their collision, which the author calls 'exponential evolution of peaks'.
