**The Event of Art** Marc Lafia,2020-09-03 The Event of Art presents, in fifty-two modular chapters and over eight hundred pages and images, the works of artist Marc Lafia. The book interweaves essays, notes, photographic archives, and a host of exhibitions wherein Lafia traverses his wide body of work and examines how his early strategies of cultural reading of photography and film, of interface, network culture, and social media, transform into an investigation of materiality itself. If his interest was once the way media becomes the message, his interest later becomes the realm of the sensible and the sensate in themselves. Here he presents art as the medium itself, giving us wide permission to explore and examine our deepest feelings and senses, our world and its becoming. The book is introduced by two essays. The first is by curator and art dealer Mathieu Borysevicz, where he recounts meeting Lafia at his first artist residency, and the many projects they would go on to do together. He introduces Lafia's interest in recording as it becomes digital and computational where recording is not only memory, and a data structure, but a permutational instrument and ever-changing horizon of iterations. The other introductory essay is by critic Daniel Coffeen, who writes, while Lafia may not have a traditional medium - there is no such thing anymore - he does in fact have one consistent medium: imaging making itself, its apparati of creation, consumption, and circulation. In fact Lafia's medium is the discourse of art - what it is, how it comes to be, how we experience it. The Event of Art presents the work of art as a complex material and societal event. The event is multiple, a continual becoming of perception, being, materiality, participation, a coming to the senses and the making, shaping and opening to them, not only of one's self, but the world becoming.

*Mind-Blowing Modular Origami* Byriah Loper,2016-10-11 Modular origami is the latest craze in paper folding! These three-dimensional models are created from a number of small pieces of paper that are easily folded and then cleverly fit together to form a spectacular shape. They range from paper polyhedra to bristling buckyballs that are reminiscent of sea urchins—to ornate flower-like spheres. Each piece of paper is held by the tension of the other papers—demonstrating the remarkable hidden properties of paper, which is at the same time flexible but also strong! Author Byriah Loper has been creating modular origami sculptures for just five years, but in that time, he's pushed the upper limits of the art form with some of the largest, most complex geometric paper constructions ever assembled. While many geo-modular origami artists focus on creating dense floral spheres, Byriah has pioneered the open, linear wire frame approach, which results in a very complex-looking model that reveals the interior of its form. He exhibits his sculptures annually at the Origami USA convention in New York, and was recently a featured artist at the Surface to Structure exhibition at the Cooper Union gallery in the East Village. A great way to learn origami, the easy-to-follow diagrams and step-by-step instructions in this book show you how to fold the paper components and then assemble them to create 22 incredible models. Each model is a new challenge, and the paper sculptures you create look fantastic on your desk or shelf!

Blindsight Peter Watts,2006-10-03 Hugo and Shirley Jackson award-winning Peter Watts stands on the cutting edge of hard SF with his acclaimed novel, Blindsight Two months since the stars fell... Two months of silence, while a world held its breath. Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who

do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a biologist so radically interfaced with machinery that he sees x-rays and tastes ultrasound. You send a pacifist warrior in the faint hope she won't be needed. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. And you send a synthesist—an informational topologist with half his mind gone—as an interface between here and there. Pray they can be trusted with the fate of a world. They may be more alien than the thing they've been sent to find. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.
