Japanese Woodworking Tools Toshio Odate, 1998 This text shows how to use Japanese tools effectively and maintain them properly, and explains the role they play in traditional Japanese craftsmanship. It describes how to create razor-sharp cutting edges and introduces almost 50 different planes.

Geometric Folding Algorithms Erik D. Demaine, Joseph O'Rourke, 2007-07-16 Did you know that any straight-line drawing on paper can be folded so that the complete drawing can be cut out with one straight scissors cut? That there is a planar linkage that can trace out any algebraic curve, or even 'sign your name'? Or that a 'Latin cross' unfolding of a cube can be refolded to 23 different convex polyhedra? Over the past decade, there has been a surge of interest in such problems, with applications ranging from robotics to protein folding. With an emphasis on algorithmic or computational aspects, this treatment gives hundreds of results and over 60 unsolved 'open problems' to

inspire further research. The authors cover one-dimensional (1D) objects (linkages), 2D objects (paper), and 3D objects (polyhedra). Aimed at advanced undergraduate and graduate students in mathematics or computer science, this lavishly illustrated book will fascinate a broad audience, from school students to researchers.

The Art and Craft of Problem Solving Paul Zeitz, 2016-12-01 Appealing to everyone from college-level majors to independent learners, *The Art and Craft of Problem Solving*, 3rd Edition introduces a problem-solving approach to mathematics, as opposed to the traditional exercises approach. The goal of *The Art and Craft of Problem Solving* is to develop strong problem solving skills, which it achieves by encouraging students to do math rather than just study it. Paul Zeitz draws upon his experience as a coach for the international mathematics Olympiad to give students an enhanced sense of mathematics and the ability to investigate and solve problems.

Machine Interpretation of Line Drawings Kōkichi Sugihara, 1986 This book solves a long-standing problem in computer vision, the interpretation of line drawings and, in doing so answers many of the concerns raised by this problem, particularly with regard to errors in the placement of lines and vertices in the images. Sugihara presents a computational mechanism that functionally mimics human perception in being able to generate three-dimensional descriptions of objects from two-dimensional line drawings. The objects considered are polyhedrons or solid objects bounded by planar faces, and the line drawings are single-view pictures of these objects. Sugihara's mechanism has several potential applications. It can facilitate man-machine communication by extracting object structures automatically from pictures drawn by a designer, which can be particularly useful in the computer-aided design of geometric objects, such as mechanical parts and buildings. It can also be used in the intermediate stage of computer vision systems used to obtain and analyze images in the outside world. The computational mechanism itself is not accompanied by a large database but is composed of several simple procedures based on linear algebra and combinatorial theory.

Contents: Introduction. Candidates for Spatial Interpretation. Discrimination between Correct and Incorrect Pictures. Correctness of Hidden Part-Drawn Pictures. Algebraic Structures of Line Drawings. Combinatorial Structures of Line Drawings. Overcoming Superstrictness. Algorithmic Aspects of Generic Reconstructibility. Specification of Unique Shapes. Recovery of Shape from Surface Information. Polyhedrons and Rigidity. Kōkichi Sugihara is Professor in the Department of Mathematical Engineering and Instrumentation Physics, Faculty of Engineering, the University of Tokyo, Tokyo, Japan. *Machine interpretation of Line Drawings* is included in *The MIT Press Series in Artificial Intelligence*, edited by Patrick Henry Winston and Michael Brady.

Rolling Warrior Judith Heumann, Kristen Joiner, 2021-06-15 As featured in the Oscar-nominated documentary *Crip Camp*, and for readers of *I Am Malala*, one of the most influential disability rights activists in US history tells her

story of fighting to belong. "If I didn't fight, who would?" Judy Heumann was only 5 years old when she was first denied her right to attend school. Paralyzed from polio and raised by her Holocaust-surviving parents in New York City, Judy had a drive for equality that was instilled early in life. In this young readers' edition of her acclaimed memoir, *Being Heumann*, Judy shares her journey of battling for equal access in an unequal world—from fighting to attend grade school after being described as a "fire hazard" because of her wheelchair, to suing the New York City school system for denying her a teacher's license because of her disability. Judy went on to lead 150 disabled people in the longest sit-in protest in US history at the San Francisco Federal Building. Cut off from the outside world, the group slept on office floors, faced down bomb threats, and risked their lives to win the world's attention and the first civil rights legislation for disabled people. Judy's bravery, persistence, and signature rebellious streak will speak to every person fighting to belong and fighting for social justice.

Japanese Emblems and Designs Walter Amstutz, 1994-01-01 Renowned for its superb invention, ingenuity, and sense of pattern, Japanese design has long been admired in the West. One specific kind of ornamentation, known as mon, is especially recognized for its unusually rhythmic and engrossing patterns. Originally designed to serve as family emblems or crests, mon have also been used in Japan as trademarks and for decorating such objects as kimonos and lacquered furniture. This volume presents 800 of these attractive, copyright-free designs, ready for use or adaptation by today's commercial artists,

craftspeople, and designers. Combining stylized natural and geometric forms to produce striking images, mon lend themselves to a wide range of applications: textile and wallpaper design, floor coverings, jewelry, mosaics, and much more. A special feature of this book is the inclusion of a number of designs by the great artist Hokusai, selected from an extremely rare edition originally published in 1824. In addition, the collection contains figures based on written characters, geometrical pattern construction, kimonos, and other motifs. Jack Hillier, a well-known author and authority on Japanese art, has provided an informative and enlightening introduction to this exciting and useful design form. Dover (1994) republication of designs and English text from the work published by University of Toronto Press, Toronto, and Amstutz de Clivo Press, Zurich.

Algebraic Geometry over C^∞ -Rings Dominic Joyce, 2019-09-05 If X is a manifold then the R -algebra $C^\infty(X)$ of smooth functions $c: X \rightarrow R$ is a C^∞ -ring. That is, for each smooth function $f: R^n \rightarrow R$ there is an n -fold operation $\Phi f: C^\infty(X)^n \rightarrow C^\infty(X)$ acting by $\Phi f: (c_1, \dots, c_n) \mapsto f(c_1, \dots, c_n)$, and these operations Φf satisfy many natural identities. Thus, $C^\infty(X)$ actually has a far richer structure than the obvious R -algebra structure. The author explains the foundations of a version of algebraic geometry in which rings or algebras are replaced by C^∞ -rings. As schemes are the basic objects in algebraic geometry, the new basic objects are C^∞ -schemes, a category of geometric objects which generalize manifolds and whose morphisms generalize smooth maps. The author also studies quasicoherent sheaves on C^∞ -schemes, and C^∞ -stacks, in particular Deligne-Mumford C^∞ -stacks, a 2-category of geometric objects generalizing orbifolds. Many of these ideas are not new: C^∞ -rings and C^∞ -schemes have long been part of synthetic differential geometry. But the author develops them in new directions. In earlier publications, the author used these tools to define d -manifolds and d -orbifolds, “derived” versions of manifolds and orbifolds related to Spivak’s “derived manifolds”.

Algebra, Geometry, and Physics in the 21st Century Denis Auroux, Ludmil Katzarkov, Tony Pantev, Yan Soibelman, Yuri Tschinkel, 2017-07-27 This volume is a tribute to Maxim Kontsevich, one of the most original and influential mathematicians of our time. Maxim’s vision has inspired major developments in many areas of mathematics, ranging all the way from probability theory to motives over finite fields, and has brought forth a paradigm shift at the interface of modern geometry and mathematical physics. Many of his papers have opened completely new directions of research and led to the solutions of many classical problems. This book collects papers by leading experts currently engaged in research on topics close to Maxim’s heart. Contributors: S. Donaldson A. Goncharov D. Kaledin M. Kapranov A. Kapustin L. Katzarkov A. Prokaryotic Antimicrobial Peptides Djamel Drider, Sylvie Rebuffat, 2011-03-08 The book will provide an overview of the advancement of fundamental knowledge and applications of antimicrobial peptides in biomedical, agricultural, veterinary, food, and cosmetic products. Antimicrobial peptides stand as potentially great alternatives to current antibiotics, and most research in this newly-created area has been published in journals and other periodicals.

It is the editors' opinion that it is timely to sum up the most important achievements in the field and provide the scientific community in a reference book. The goals of this project include illustrating the achievements made so far, debating the state of the art, and drawing new perspectives.

Multi-Processor System-on-Chip 1 Liliana Andrade, Frederic Rousseau, 2021-03-12 A Multi-Processor System-on-Chip (MPSoC) is the key component for complex applications. These applications put huge pressure on memory, communication devices and computing units. This book, presented in two volumes – Architectures and Applications – therefore celebrates the 20th anniversary of MPSoC, an interdisciplinary forum that focuses on multi-core and multi-processor hardware and software systems. It is this interdisciplinarity which has led to MPSoC bringing together experts in these fields from around the world, over the last two decades. Multi-Processor System-on-Chip 1 covers the key components of MPSoC: processors, memory, interconnect and interfaces. It describes advance features of these components and technologies to build efficient MPSoC architectures. All the main components are detailed: use of memory and their technology, communication support and consistency, and specific processor architectures for general purposes or for dedicated applications.
