Natural and Man-Made Hazards Mohammed I. El-Sabh, Tad S. Murty, 2012-12-06 In recent years, several major natural and man-made hazards have challenged scientists, government officials and the public in general: earthquakes, major volcanic and other seismic eruptions in Mount St. Helens, El Chichon, Mexico city, Nevado del Ruiz, Japan, Italy, Greece, Cameroon and many other places on our globe; Tsunami in the Pacific Ocean and deadly storm surges along the coasts of India, Bangladesh and Japan; Cyclones, floods, thunderstorms, snow storms, tornadoes, drought, desertification and other climatic catastrophes; Amoco-Cadiz oil spill accident (France), Three-Mile Island (U. S. A.) and Chernobyl (U. S. S. R.) nuclear accidents, Bhopal chemical accident (India), acid rain (Canada, U. S. A.) and other technological disasters. Such hazards have snuffed out millions of lives, infli

Stormwater Runoff and Receiving Systems Edwin Herricks, 1995-07-25 The primary focus of stormwater and urban runoff research during the past twenty-five years has been on the physical description and the chemical quality assessment of runoff events and the design and implementation of the best management practices to control these events. There is a definite need for more effective integration of receiving system issues in the management and regulation of stormwater runoff. This book successfully brings together a diverse group of environmental specialists to address the issues surrounding the assessment, management, and control of stormwater, and more specifically urban runoff, from a receiving system perspective. The book's emphasis on the receiving system is timely, coming during a period when the U.S. Environmental Protection Agency is placing increasing emphasis on wet weather conditions through a new permit program for stormwater runoff and a policy on combined sewer overflows. Stormwater Runoff and Receiving Systems covers biocriteria, assessment of receiving water integrity, and integrated watershed analysis—all aspects of current water quality management programs for both industrial and municipal areas. More than thirty chapters are divided into six sections, offering in-depth discussions on various issues relating to stormwater, urban runoff, and receiving systems; impacts; uncertainty and risk; study design; impact mitigation; and issues analysis. Anyone who deals with regulatory programs requiring stormwater effect assessment including more than sampling and analysis of chemical water quality parameters in effluents will find this reference particularly useful.

Coastal Disaster Surveys and Assessment for Risk Mitigation Tomoya Shibayama, Miguel Esteban, 2022-12-19 This collection covers essential concepts in the management of coastal disasters, outlining several field surveys of such events that have taken place in the 21st century, including the Indian Ocean Tsunami, the Tohoku Earthquake and Tsunami, and the storm surges generated by Hurricane Katrina, Cyclone Nargis, and Typhoon Haiyan. Measurements of flood heights, distributions of structural destruction, and the testimonies of residents are reported, with the results being analysed and compared with past events and numerical simulations to clarify and reconstruct the reality of these disasters. The book covers the state-of-the-art understanding of disaster mechanisms and the most advanced tools for the simulation of future events: • Uniquely explains how to use disaster surveys along with simulations to mitigate risk • Combines pure scientific studies with practical research and proposes procedures for effective coastal disaster mitigation Coastal Disaster Surveys and Assessment for Risk Mitigation is ideal for students in the field of disaster risk management, as well as engineers who deal with issues related to tsunamis, storm surges, high wave attack and coastal erosion.

APAC 2019 Nguyen Trung Viet,Dou Xiping,Tran Thanh Tung,2019-09-25 This book presents selected articles from the International Conference on Asian and Pacific Coasts (APAC 2019), an event intended to promote academic and technical exchange on coastal related studies, including coastal engineering and coastal environmental problems, among Asian and Pacific countries/regions. APAC is jointly supported by the Chinese Ocean Engineering Society (COES), the Coastal Engineering Committee of the Japan Society of Civil Engineers (JSCE), and the Korean Society of Coastal and Ocean Engineers (KSCOE). APAC is jointly supported by the Chinese Ocean Engineering Society (COES), the Coastal Engineering Committee of the Japan Society of Civil Engineers (JSCE), and the Korean Society of Coastal and Ocean Engineers (KSCOE).

Coping with Floods Giuseppe Rossi,Nilgun B. Harmanciogammalu,V. Yevjevich,2012-12-06 Floods are natural hazards whose effects can deeply affect the economic and environmental equilibria of a region. Quality of life of people living in areas close to rivers depends on both the risk that a flood would occur and the reliability of flood forecast, warning and control systems. Tools for forecasting and mitigating floods have been developed through research in the recent past. Two innovations currently influence flood hazard mitigation, after many decades of lack of significant progress: they are the development of new technologies for real-time flood forecast and warning (based on weather radars and satellites) and a shift from structural to non-structural flood control measures, due to increased awareness of the importance of protecting the environment and the adverse impacts of hydraulic works on it. This book is a review of research progress booked in the improvements of forecast capability and the control of floods. Mostly the book presents the results of recent research in hydrology, modern techniques of real-time forecast and warning, and ways of controlling floods for smaller impacts on the environment. A number of case studies of floods in different geographical areas are also presented. Scientists and specialists working in fields of hydrology, environmental protection and hydraulic engineering will appreciate this book for its theoretical and practical content.

Encyclopedia of Hurricanes, Typhoons, and Cyclones, Third Edition David Longshore,2020-06-01 Praise for the previous edition: ...a strong pick for any collection strong in weather science at the high school or college levels.--Midwest Book Review The entries in the encyclopedia make great reading...has considerable merit and most libraries will want to purchase the volume for their reference collections.--American Reference Books Annual ...comprehensive, highly readable...Recommended.--Choice ...a fact-filled work with articles that are informative and accessible to both student and lay reader...a reasonable and worthwhile investment for both academic and public libraries...larger libraries may want this title for their circulating collections as well.--Against the Grain Now in its third edition, this comprehensive encyclopedia covers all major aspects of tropical cyclone activity. Hundreds of extensively cross-referenced A-to-Z entries detail cyclonic storms in meteorology, history, and culture, along with accessible definitions of technical terms and engaging narratives that capture the dramatic intensity of tropical storms, hurricanes, typhoons, and cyclones and the devastation and loss that often resulted. Hurricanes Andrew, Dean, Felix, Gilbert, Wilma, Sandy, and Maria are covered in detail in this comprehensive reference, as well as the most destructive and deadly tropical cyclone witnessed in the United States in the last 50 years--Hurricane Katrina.

Instrumentation, Control and Automation of Water and Wastewater Treatment and Transport Systems R. Briggs,2013-09-24 Instrumentation, Control and Automation of Water and Wastewater Treatment and Transport Systems documents

the proceedings of the 5th IAWPRC Workshop held in Yokohama and Kyoto, Japan, 26 July-3 August 1990. The papers presented at this Workshop have emphasized the following aspects: • new sensor technology based on developments in electrochemistry, fiber optics, and electro-optics; • research into materials such as those needed to produce membranes of the required selectivity, for immobilization of reactive species, and for addition of reagents and standards; • the use of inferential measurements coupled with expert system technology; • the ever-increasing power of microprocessors and the continuing reduction in their unit costs; • better communications capability; • improved mathematical modeling; • an increased awareness of the improved management that results from the timely availability of relevant data to the appropriate levels in the management hierarchy. This book, together with the proceedings of previous workshops, provides what is probably the most comprehensive account of the state of the art and recent developments in instrumentation, control, and automation as applied to the water and water-using industries, and as such will be invaluable to the practitioner, the researcher, and the student community.

Non Point Pollution and Urban Stormwater Management Vladimir

Novotny, 1995-10-11 Directions of diffuse pollution research and Best Management Practices are evolving, and effective and affordable methods of control are being developed to handle the abatement of toxic pollutants from atmospheric deposition, and urban and agricultural runoff. This book provides a useful manual covering the most important topics and solutions of the diffuse pollution problem with emphasis on urban sources and abatement.

Hydroinformatics Tools for Planning, Design, Operation and Rehabilitation of Sewer Systems Jiri Marsalek, Cedo Maksimovic, Evzen Zeman, Roland

Price, 1998-06-30 Hydroinformatics systems are systems that combine computational hydraulic modelling with information systems (including knowledge-based systems). They are gaining rapid acceptance in the areas of environmental planning, design and management. The present book focuses exclusively on sewage systems, starting with their planning and then going on to discuss their design, operation and rehabilitation. The very experienced authors discuss business and information needs in the management of urban drainage, tools for collecting and archiving such data, and their use in modelling catchment hydrology, sewer systems hydraulics, wastewater quality, wastewater treatment plant operation, and receiving waters. The control and operation of sewer systems in real time is described, followed by a discussion of their maintenance and rehabilitation. Intelligent decision support systems for managing the urban drainage business process are presented. Audience: Researchers into sewer design, municipal engineers, planners and managers interested in an innovative approach to all aspects of the planning, design and operation of sewer systems.
