Mechanical Fatigue of Metals José A.F.O. Correia, Abílio M.P. De Jesus, António Augusto Fernandes, Rui Calçada, 2019-05-07 This volume contains the proceedings of the XIX International Colloquium on Mechanical Fatigue of Metals, held at the Faculty of Engineering of the University of Porto, Portugal, 5-7 September 2018. This International Colloquium facilitated and encouraged the exchange of knowledge and experiences among the different communities involved in both basic and applied research in the field of the fatigue of metals, looking at the problem of fatigue exploring analytical and numerical simulative approaches. Fatigue damage represents one of the most important types of damage to which structural materials are subjected in normal industrial services that can finally result in a sudden and unexpected abrupt fracture. Since metal alloys are still today the most used materials in designing the majority of components and structures able to carry the highest service loads, the study of the different aspects of metals fatigue attracts permanent attention of scientists, engineers and designers.

Case Studies in Micromechatronics Stephanus Büttgenbach, Iordania Constantinou, Andreas Dietzel, Monika Leester-Schädel, 2020-05-15 The book "Case Studies in Micromechatronics – From Systems to Process" offers prominent sample applications of micromechatronic systems and the enabling fabrication technologies. The chosen examples represent five main fields of application: consumer electronics (pressure sensor), mobility and navigation (acceleration sensor), handling technology and automation (micro gripper), laboratory diagnostics (point of care system), and biomedical technology (smart skin). These five sample systems are made from different materials requiring a large variety of modern fabrication methods and design rules, which are explained in detail. As a result, an inverted introduction "from prominent applications to base technologies" is provided. Examples of applications are selected to offer a broad overview of the development environment of micromechatronic systems including established as well as cutting-edge microfabrication technologies.

CONCRETE Innovations in Materials, Design and Structures FIB –

International Federation for Structural Concrete, 2019-05-27 This Proceedings contains the papers of the fib Symposium “CONCRETE Innovations in Materials, Design and Structures”, which was held in May 2019 in Kraków, Poland. This annual symposium was co-organised by the Cracow University of Technology. The topics covered include Analysis and Design, Sustainability, Durability, Structures, Materials, and Prefabrication. The fib, Fédération internationale du béton, is a not-for-profit association formed by 45 national member groups and approximately 1000 corporate and individual members. The fib’s mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical, economic, aesthetic and environmental performance of concrete construction. The fib, was formed in 1998 by the merger of the Euro-International Committee for Concrete (the CEB) and the International Federation for Prestressing (the FIP). These predecessor organizations existed independently since 1953 and 1952, respectively.

The Art & Science of Illuminated Manuscripts Stella Panayotova, 2021-02-11

The results achieved by the research of the pioneering MINIARE research project based at the Fitzwilliam Museum in Cambridge led to the ground-breaking and acclaimed 2016 exhibition COLOUR: The Art and Science of Illuminated Manuscripts. This was followed by an international Conference, in which art historians, paper and book conservators, and cultural heritage scientists were brought together to share new recent research not only on manuscripts but also on painting in other media. The Conference proceedings were published in the first two volumes of the HMMIMA series (2017-2018). The present publication includes 6 Essays by way of introducing and explaining the major topics being investigated, including the range of inks, pigments and paint binders used by illuminators; parchment-making; pigment recipes; and model books. The many analytical instruments and techniques that are used to investigate manuscripts are also discussed. Then follow 58 Case Studies of manuscripts from as early as the year 700 up to c.1600. All these are fully illustrated in colour and in great detail, and should act as examples to inform scholars in libraries, museums and other cultural institutions of the benefits of adding scientific tools to the range of methods used to investigate manuscripts.

Micro Mechanical Transducers Min-hang Bao, 2000-10-16 Some years ago, silicon-based mechanical sensors, like pressure sensors, accelerometers and gyroscopes, started their successful advance. Every year, hundreds of millions of these devices are sold, mainly for medical and automotive

applications. The airbag sensor on which research already started several decades ago at Stanford University can be found in every new car and has saved already numerous lives. Pressure sensors are also used in modern electronic blood pressure equipment. Many other mechanical sensors, mostly invisible to the public, perform useful functions in countless industrial and consumer products. The underlying physics and technology of silicon-based mechanical sensors is rather complex and is treated in numerous publications scattered throughout the literature. Therefore, a clear need existed for a handbook that thoroughly and systematically reviews the present basic knowledge on these devices. After a short introduction, Professor Bao discusses the main issues relevant to silicon-based mechanical sensors. First a thorough treatment of stress and strain in diaphragms and beams is presented. Next, vibration of mechanical structures is illuminated, followed by a chapter on air damping. These basic chapters are then succeeded by chapters in which capacitive and piezoresistive sensing techniques are amply discussed. The book concludes with chapters on commercially available pressure sensors, accelerometers and resonant sensors in which the above principles are applied. Everybody, involved in designing silicon-based mechanical sensors, will find a wealth of useful information in the book, assisting the designer in obtaining highly optimized devices.

Comparative Poetics Earl Roy Miner, 1990-10-23 Comparative literature, Earl Miner writes, clearly involves something more than comparing two great German poets, and something different from a Chinese studying French literature or a Russian studying Italian literature. But what would a true intercultural poetics be? This work proposes various ways to study something other than what are, all things considered, the short and simple annals of one cultural parish at one historic moment. The first developed account of theories of literature from an intercultural standpoint, the book shows that an originative or foundational poetics develops in cultures with explicit poetics when critics define the nature and conditions of literature in terms of the then most esteemed genres drama, lyric, or narrative. Earl Miner demonstrates that these definitions and inferences from them constitute useful bases for comparative poetics.

Scientific Computing and Cultural Heritage Hans Georg Bock, Willi Jäger, Michael J. Winckler, 2012-10-22 The sheer computing power of modern information technology is changing the face of research not just in science, technology and mathematics, but in humanities and cultural studies too. Recent decades have seen a major shift both in attitudes and deployment of computers, which are now vital and highly effective tools in disciplines where they were once viewed as elaborate typewriters. This revealing volume details the vast array of computing applications that researchers in the humanities now have recourse to, including the dissemination of scholarly information through virtual 'co-laboratories', data retrieval, and the modeling of complex processes that contribute to our natural and cultural heritage. One key area covered in this book is the versatility of computers in presenting images and graphics, which is transforming the analysis of data sets and archaeological reconstructions alike. The papers published here are grouped into three broad categories that cover mathematical and computational methods, research developments in information systems, and a detailed portrayal of ongoing work on documenting, restoring and presenting cultural monuments including the temples in Pompeii and the Banteay Chhmar temples of

the Angkorian period in present-day Cambodia. Originally presented at a research workshop in Heidelberg, Germany, they reflect the rapidly developing identity of computational humanities as an interdisciplinary field in its own right, as well as demonstrating the breadth of perspectives in this young and vibrant research area.

The Mechatronics Handbook - 2 Volume Set Robert H. Bishop, 2018-10-08 The first comprehensive reference on mechatronics, *The Mechatronics Handbook* was quickly embraced as the gold standard in the field. From washing machines, to coffeemakers, to cell phones, to the ubiquitous PC in almost every household, what, these days, doesn't take advantage of mechatronics in its design and function? In the scant five years since the initial publication of the handbook, the latest generation of smart products has made this even more obvious. Too much material to cover in a single volume Originally a single-volume reference, the handbook has grown along with the field. The need for easy access to new material on rapid changes in technology, especially in computers and software, has made the single volume format unwieldy. The second edition is offered as two easily digestible books, making the material not only more accessible, but also more focused. Completely revised and updated, Robert Bishop's seminal work is still the most exhaustive, state-of-the-art treatment of the field available.

Best of all, she reveals how she was always determined to be a writer; from the very first story she wrote, it was clear that this little girl had a very vivid imagination! But who would've guessed that she would grow up to be the mega-bestselling, award-winning Jacqueline Wilson? With original photographs and new illustrations by Nick Sharratt, this book is a delight for all of Jacky's fans, and a treat for any new readers too.
