Investigations of Large Scale Storm Systems Arnold A. Barnes,1982 The microphysics of Large Scale Cloud Systems (LSCS) was investigated by in-situ measurements made from two specially instrumented aircraft, a United States Air Force MC-130E and a Learjet 36 Information was obtained on the distribution of liquid and ice water content, particle size distributions, crystal habits, and other meteorological variables. The morphologies of three storms were investigated in detail as the storms crossed the United States.

The Oxford Handbook of Non-Synoptic Wind Storms Horia Hangan,Ahsan Kareem,2021-08-16 In different areas of the world, much of the damage due to wind is caused by non-synoptic, local wind storm events, such as tornadoes and downbursts. In North America the damage due to these winds is more than 65% of total wind damage, and there are no guidelines or code implementations to deal with such catastrophic events. As we enter the third decade of the twenty-first century, current research is in its first phase of addressing these types of events, from their characterization, simulation, and loading, to collapse-mode effects on buildings and structures, as well as socioeconomic implications. The need is clear to better understand non-synoptic local winds; properly simulate them; assess the difference in loading between these events and synoptic large-scale winds that have been part of the wind engineering practice for more than five decades; determine

their statistics and associated risks; and apply this through guidelines, codes, risk mitigation, and adaptation responses to socioeconomic impact. The Oxford Handbook of Non-Synoptic Wind Storms, led by Dr. Horia Hangan and Dr. Ahsan Kareem, features nearly 30 chapters, contributed by an international panel of leading scientists, scholars, and engineers, that address these issues and stimulate thought, research, and responses to non-synoptic wind storm hazards in North America and worldwide. Together, these articles provide clear definitions of the problems to be tackled, offer a strategic framework for forward-looking research, identify the best-suited tools and methodologies to address the problems at hand, and suggest ways to maximize collaborative planning between the disciplines that will tackle these challenges.

Storm-surge Forecasting J. W. Nickerson,1971 The report contains an adaptation of a unique storm-surge forecasting technique developed by Dr. C.P. Jelesnianski. This technique results in a computed storm surge profile at the inner boundary of an artificial standard basin seaward of the coast. The profile is derived from nomograms based upon a standard storm passing over a standard basin. Thumb rules and guidelines are presented in the publication for subjectively modifying the computer storm surge height as it moves shoreward of the artificial basin boundary, to fit the natural conditions of a particular coastline. Major advantages of this system are its applicability to almost any locale, its adaptability to data normally available to the field forecaster and the speed with which the forecast may be modified to remain current with natural fluctuations of the storm.

Storm World Chris Mooney, 2008-08-04 An investigation into climate change and increasingly dangerous hurricanes from the New York Times—bestselling author of *The Republican War on Science*. A leading science journalist delves into a red-hot debate in meteorology: whether the increasing ferocity of

hurricanes is connected to global warming. In the wake of Katrina, Chris Mooney follows the careers of leading scientists on either side of the argument through the 2006 hurricane season, tracing how the media, special interests, politics, and the weather itself have skewed and amplified what was already a fraught scientific debate. As Mooney puts it: "Scientists, like hurricanes, do extraordinary things at high wind speeds." Mooney—a New Orleans native, host of the Point of Inquiry podcast, and author of *The Republican Brain*—has written "a well-researched, nuanced book" that closely examines whether we as a society should be held responsible for making hurricanes even bigger monsters than they already are (*The New York Times*). "Mooney serves his readers as both an empiricist who gathers data and an analyst who puts it into context. The result is an important book, whose author succeeds admirably in both his roles." —*The Plain Dealer* "Engaging and readable . . . Mooney catches real science in the act and, in so doing, weaves a story as intriguing as it is important." —*Los Angeles Times Book Review* "Mooney has hit upon an important and controversial topic, and attacks it with vigor." —*The Boston Globe* "An absorbing, informed account of the politics behind a pressing contemporary controversy." —*Kirkus Reviews*
