Weaponomics: the global market for assault rifles Phillip Killicoat, 2007
Abstract: This paper introduces the first effort to quantitatively document the small arms market by collating field reports and journalist accounts to produce a cross-country time-series price index of Kalashnikov assault rifles. A model of the small arms market is developed and empirically estimated to identify the key determinants of assault rifle prices. Variables which proxy the effective height of trade barriers for illicit trade are consistently significant in determining weapon price variation. When controlling for other factors, the collapse of the Soviet Union does not have as large an impact on weapon prices as is generally believed.

The AK-47 Gordon L. Rottman, 2011-05-03 A detailed, fully illustrated study of the most recognizable assault rifle ever produced. The Kalashnikov AK-47 is the most ubiquitous assault rifle in the world, with more AK-47s and its variants in use than any other individual small arm. Created by Senior Sergeant Mikhail Kalashnikov, and first adopted by the USSR soon after World War II, its production continues to this day, with an estimated 75 million produced worldwide. Supported by photographs and original artwork, this book takes a look at the complete history of the weapon, discussing its design, development, and usage, taking its story from the great armies of the Soviet Union to the insurgents and criminal gangs that often employ the weapon today.

NICOMACHEAN ETHICS Aristotle, 2017-04-20 **EVERY** art and every inquiry, and similarly every action and pursuit, is thought to aim at some good; and for this reason the good has rightly been declared to be that at which all things aim. But a certain difference is found among ends; some are activities, others are products apart from the activities that produce them. Where there are ends apart from the actions, it is the nature of the products to be better than the activities. Now, as there are many actions, arts, and sciences, their ends also are many; the end of the medical art is health, that of shipbuilding a vessel, that of strategy victory, that of economics wealth. But where such arts fall under a single capacity- as bridle-making and the other arts concerned with the equipment of horses fall under the art

of riding, and this and every military action under strategy, in the same way other arts fall under yet others- in all of these the ends of the master arts are to be preferred to all the subordinate ends; for it is for the sake of the former that the latter are pursued. It makes no difference whether the activities themselves are the ends of the actions, or something else apart from the activities, as in the case of the sciences just mentioned.②

Auditory Development in Infancy Sandra E. Trehub, Bruce Schneider, 2013-11-21
The small but growing body of information about auditory processes in infancy is a tribute to the ingenuity and persistence of investigators in this realm. Undeterred by the frequent expressions of boredom, rage, and indifference in their subjects, these investigators nevertheless continue to seek answers to the intriguing but difficult questions about the course of auditory development. In the spring of 1981, a group of leading scholars and researchers in audition gathered to discuss the topic, Auditory Development in Infancy, at the 11th annual psychology symposium at Erindale College, University of Toronto. They came from both sides of the Atlantic and from various disciplines, including audiology, neurology, physics, and psychology. They shared their views on theory and data, as well as their perspectives from the laboratory and clinic. One unexpected bonus was an unusually distinguished audience of researchers and clinicians who contributed to lively discussion within and beyond the formal sessions.
