ANNA HOLLAND

📖 **Pre** Tom Jordan,2012-12-19 The story of America’s greatest running legend. For five years, no American runner could beat him at any distance over a mile. But at the age of 24, with his best years still ahead, long-distance runner Steve Prefontaine finally lost. Driving alone at night after a party, Prefontaine crashed his sports car, putting a tragic, shocking end to the life and career of one of the most influential, accomplished runners of our time. More than 20 years later, Pre continues to influence the running world. From his humble origins in Coos Bay, Oregon, Pre became the first person to win four NCAA titles in one event. Year after year, he was virtually unbeatable. Instead of becoming one of the new breed of professional track athletes, Pre chose to stay amateur and fight for the adequate funding he felt American amateur athletes deserved. A man of incredible desire and energy, Pre trained relentlessly. In his drive to be the best, he spurred others to do their best. As one racer said, He ran every race as if it were his last. But Pre not only touched runners; his exciting technique as well as his maverick lifestyle made him a favorite of the fans. A race with Prefontaine in it was automatically an event. His brief but brilliant life—documented by author Tom Jordan—is the tale of a true American hero. This is his story. Some people create with words or with music or with a brush and paints. I like to make something beautiful when I run. I like to make people stop and say, ‘I’ve never seen anyone run like that before.’ It’s more than just a race, it’s style. It’s doing something better than anyone else. It’s being creative. —Steve Prefontaine *The e-book edition does not include photos

📖 **Computer Science and Engineering Education for Pre-Collegiate Students and Teachers** Andrea Burrows,2019-06-11 Now more than ever, as a worldwide STEM community, we need to know what pre-collegiate teachers and students explore, learn, and implement in relation to computer science and engineering education. As computer science and engineering education are not always “stand-alone” courses in pre-collegiate schools, how are pre-collegiate teachers and students learning about these topics? How can these subjects be integrated? Explore six articles in this book that directly relate to the currently hot topics of computer science and engineering education as they tie into pre-collegiate science, technology, and mathematics realms. There is a systematic review article to set the stage of the problem. Following this overview are two teacher-focused articles on professional development in computer science and entrepreneurship venture training. The final three articles focus on varying levels of student work including pre-collegiate secondary students’ exploration of engineering design technology, future science teachers’ (collegiate students) perceptions of engineering, and pre-collegiate future engineers’ exploration of environmental radioactivity. All six articles speak to computer science and engineering education in pre-collegiate forums, but blend into the collegiate world for a look at what all audiences can bring to the conversation about these topics.

📖 **The Influence of Pre-Raphaelitism on Fin de Siècle Italy** Giuliana Pieri,2007 This volume is the first comprehensive study of the influence of English Pre-Raphaelitism on Italian art and culture in the late nineteenth century. Analysis of the cultural relations between Italy and Britain has focused traditionally on the special place that Italy had in the British imagination, but the cultural and artistic exchanges between the two countries have been much misunderstood. This book aims to correct this imbalance by placing Pre-Rapahelitism in its European context. It explores the nature of its influence on Italy, how it was transmitted, and how it was manifested, by focusing on the role of Italian Anglophiles, the English communities in Florence and Rome, the writings of Gabriele D’Annunzio, and a number of Italian artists active in Tuscany and Rome. The works of Cellini, Ricci, Gioja, De Carolis, and Sartorio in particular fully demonstrate the impact of Pre-Raphaelitism on the young Italian school of painting which found in the English movement an ideal link with its glorious past on which it could build a new artistic identity. These artists show that English Pre-Raphaelitism was one of the most powerful single influences on fin-de-siècle Italian culture.

📖 **Pre-surgery Physiotherapy and Pain Thresholds in Patients with Degenerative Lumbar Spine Disorders** Yvonne Lindbäck,2019-01-31 Background: Patients scheduled for spinal surgery often experience long duration of pain, which may influence the pain-regulation system, function and health and have an impact on post-surgery outcome. Prehabilitation potentially augments functional capacity before surgery, which may have beneficial effects after surgery. Aim: The overall aim of the thesis is to study pre-surgery physiotherapy and somatosensory function in patients with degenerative lumbar spine disorders and to explore the patients’ experiences of pre-surgery physiotherapy. Methods: Somatosensory function was measured with quantitative sensory testing (QST). Pre-surgery physiotherapy was evaluated with patient-reported outcome measures (n = 197). Patients’ experiences of how symptoms are explained and their experiences of the influences on back-related health after pre-surgery physiotherapy were explored. Results: Half of the patients reported back or leg pain for more than 2 years. On a group level, the somatosensory profiles were within the reference range. On an individual level, an altered somatosensory profile was found in 23/105 patients, these were older, more often women, and reported higher pain, larger pain distribution and worse SF-36 MCS (Mental Health Component Summary). Patients with disc herniation, more sensitive to pressure pain in the hand presurgery, was associated with poorer function, self-efficacy, anxiety and depression score pre-surgery, worse function, self-efficacy and leg pain 3 months post-surgery and worse health related quality of life, self-efficacy, depression score 1 year postsurgery. The results for sensitivity for cold pain were similar, except that it even was associated with poorer function and pain 1 year post-surgery. The pre-surgery physiotherapy group had less back pain, better function, health, self-efficacy, fear avoidance score, depression score and physical activity level than the waiting-list group after the pre-surgery intervention. The effects were small. Both groups improved significantly after surgery, with no differences between groups, except that the higher physical activity level in the physiotherapy group remained at the 1-year follow-up. Only 58% of the patients reported a minimum of one visit for rehabilitation during the 1 year preceding the decision to undergo surgery. Patients experienced that pre-surgery physiotherapy had influenced symptoms, physical function, coping, well-being and social functioning to various degrees. Pre-surgery physiotherapy was experienced as a tool for reassurance and an opportunity to reflect about treatment and lifestyle. The patients mainly used biomedical explanatory models based on image reports to explain their backrelated symptoms. Both broader and more narrow, as well as lack of explanations of symptoms emerged. Further, wanting and sometimes struggling to be wellinformed about symptoms and interventions were described. Conclusions: Being more sensitive to pressure- and cold pain in the hand, as a sign of widespread pain pre-surgery, was associated with poorer function, pain and health at post-surgery in patients with disc herniation. Pre-surgery physiotherapy decreased pain, fear avoidance, improved health related quality of life; and it decreased the risk of a worsening in psychological well-being before surgery. The improvements were small, and improvements after surgery were similar for both groups. At the 1-year follow-up, the physiotherapy group still had a higher activity level than the waiting list group. The pre-surgery physiotherapy was well tolerated. Patients’ reported experiences also illustrates the influence on function, pain and health. Patients experienced that pre-surgery physiotherapy provided reassurance and gave time to reflect on treatments and lifestyle. Symptoms were mainly described in line with a biomedical explanatory model. Those using a broader explanation were confident that physiotherapy and self-management could influence their back-related symptoms.
