*Skarns in British Columbia* Gerald E. Ray,I. C. L. Webster,British Columbia. Ministry of Employment and Investment,British Columbia. Geological Survey Branch,1997

Skarns in British Columbia have historically been important sources of iron, tungsten, copper, and gold. This publication begins with an introduction on skarn terminology and the problems of skarn identification. It then reviews a genetic model of skarn formation and presents descriptive profiles of eight types of skarn deposits; describes the database of at least 735 skarn occurrences in the province, and the number and distribution of skarns in British Columbia according to their associations, class, age, and distribution; and notes the ages of British Columbia skarns and the total production of various metals extracted from British Columbia skarns. Subsequent sections provide information on assays and metal ratios of mineralized skarns, skarn mineralogy, skarn mineral chemistry, chemistry of skarn-related intrusions, and the mapping and evaluation of skarns. The appendix contains a listing of 735 skarn occurrences in British Columbia, giving deposit name, MINFILE number, latitude/longitude, elements and minerals present, and associated rocks and their ages.

*Introduction to UAV Systems* Paul Fahlstrom,Thomas Gleason,2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in themilitary world over the last decade and the success of thesemilitary applications is increasingly driving efforts to establishunmanned aircraft in non-military roles. Introduction to UAV Systems,4th edition provides a comprehensiveintroduction to all of the elements of a complete Unmanned AircraftSystem (UAS). It addresses the air vehicle, mission planning andcontrol, several types of mission payloads, data links and how theyinteract with mission performance, and launch and recoveryconcepts. This book provides enough information to encourage astudent to learn more; to provide a specialist with a basicappreciation of the technical issues that drive other parts of thesystem and interact with their specialty; or to help a programmanager understand system-level tradeoffs and know what questionsto ask. Key features: Comprehensive overview of all elements of a UAS and of how theyinteract. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate tosubsystem design choices. Practical discussion of issues informed by lessons learned inUAV programs. Introduction to UAV Systems,4th edition is written both for newcomerto the subject and for experienced members of the UAV community whodesire a comprehensive overview at the system level. As well as being a primary text for an introductory course onUAS or a supplementary text in a course that goes into more depthin one of the individual technologies involved in a UAS, this bookis a useful overview for practicing engineers, researchers,managers, and consultants interested in UAV systems.

**French Cruisers, 1922–1956** Jean Moulin,John Jordan,2013-03-04 A technical analysis and pictorial history of the French navy cruisers built in the early to mid-twentieth century. The French produced some of the most striking and innovatory interwar cruiser designs. A large amount of new information about these ships has become available over the past twenty years in France, but this book is the first to make this accessible to an English-speaking readership. Part I explains the design philosophy behind each of the classes built after 1922, and outlines the characteristics of each type, accompanied by detailed data tables and a comprehensive set of specially-drawn plans based on official documents, as well as carefully-selected photographs. Coverage includes the De Grasse, laid down in August 1939 and completed postwar as an AA cruiser, and also the heavy cruisers of the Saint Louis class intended to follow her, about which little has been published. Part II deals with the historical side, covering not only the eventful careers of these ships, but also explaining the peacetime organization of the Marine Nationale, the complex politics of this turbulent period and their impact on the navy. Like its highly successful predecessor, French Battleships, this beautifully presented book subtly blends technical and historical analysis to produce what must become the standard reference work. Praise for French Cruisers “A clearly-written and excellently presented book which, particularly with respect to its technical descriptions, explains its chosen subject area in a convincing and comprehensive fashion. The authors are to be commended for their achievement in bringing knowledge of a previously sparsely-covered subject to an English language readership.” –Warship Annual 2014

**War at Sea in the Middle Ages and the Renaissance** John B. Hattendorf,Richard W. Unger,2003 Wide-ranging in place and time, yet tightly focused on particular concerns, these new and original specialist articles show how observations on the early history of warfare based on the relatively stable conditions of the late seventeenth century ignore the realities of war at sea in the middle ages and renaissance. In these studies, naval historians firmly grounded in the best current understanding of the period take account of developments in ships, guns and the language of public policy on war at sea, and in so doing give a stimulating introduction to five hundred years of maritime violence in Europe.--BOOK JACKET.
