How to Win Every Argument Madsen Pirie, 2015-03-12 In the second edition of this witty and infectious book, Madsen Pirie builds upon his guide to using - and indeed abusing - logic in order to win arguments. By including new chapters on how to win arguments in writing, in the pub, with a friend, on Facebook and in 140 characters (on Twitter), Pirie provides the complete guide to triumphing in altercations ranging from the everyday to the downright serious. He identifies with devastating examples all the most common fallacies popularly used in argument. We all like to think of ourselves as clear-headed and logical - but all readers will find in this book fallacies of which they themselves are guilty. The author shows you how to simultaneously strengthen your own thinking and identify the weaknesses in other people arguments. And, more mischievously, Pirie also shows how to be deliberately illogical - and get away with it. This book will make you maddeningly smart: your family, friends and opponents will all wish that you had never read it. Publisher's warning: In the wrong hands this book is dangerous. We recommend that you arm yourself with it whilst keeping out of the hands of others. Only buy this book as a gift if you are sure that you can trust the recipient.

Research on Human Subjects Bernard Barber, 2018-04-24 The use of human subjects in biomedical research has increased rapidly with scientific discoveries. However, the failure to achieve the highest - or even adequate - standards of professional moral concern and behavior is a serious side effect. *Research on Human Subjects* is based on four years of intensive research in which two studies were completed - one on a nationally representative sample of biomedical research institutions, the second on a sample of 350 researchers who actually used human subjects. The authors explore prevalent ethical norms, the actual ethical behavior of scientists, and the dilemma between the values of humane therapy and scientific discovery. They document the inadequate training that biomedical researchers receive in the ethics of research on human subjects, not only in medical schools but in post-graduate training as well. This landmark work makes very specific suggestions for policy change and reform for the biomedical research profession and its employment of human subjects.

Assuring the Confidentiality of Social Research Data Robert F. Boruch, Joe S. Cecil, 2016-11-11 This book is a volume in the Penn Press Anniversary Collection. To mark its 125th anniversary in 2015, the University of Pennsylvania Press rereleased more than 1,100 titles from Penn Press's distinguished backlist from 1899-1999 that had fallen out of print. Spanning an entire century, the Anniversary Collection offers peer-reviewed scholarship in a wide range of subject areas.

Generosity Richard Powers, 2010-08-03 The National Book Award-winning author of *The Echo Maker* proves yet again that no writer of our time dreams on a grander scale or more knowingly captures the zeitgeist. (The Dallas Morning News). What will happen to life when science identifies

the genetic basis of happiness? Who will own the patent? Do we dare revise our own temperaments? Funny, fast, and magical, *Generosity* celebrates both science and the freed imagination. In his most exuberant book yet, Richard Powers asks us to consider the big questions facing humankind as we begin to rewrite our own existence. A New York Times Book Review Notable Book of the Year

The Lucifer Effect Philip Zimbardo, 2008-01-22 The definitive firsthand account of the groundbreaking research of Philip Zimbardo—the basis for the award-winning film *The Stanford Prison Experiment* Renowned social psychologist and creator of the Stanford Prison Experiment Philip Zimbardo explores the mechanisms that make good people do bad things, how moral people can be seduced into acting immorally, and what this says about the line separating good from evil. *The Lucifer Effect* explains how—and the myriad reasons why—we are all susceptible to the lure of “the dark side.” Drawing on examples from history as well as his own trailblazing research, Zimbardo details how situational forces and group dynamics can work in concert to make monsters out of decent men and women. Here, for the first time and in detail, Zimbardo tells the full story of the Stanford Prison Experiment, the landmark study in which a group of college-student volunteers was randomly divided into “guards” and “inmates” and then placed in a mock prison environment. Within a week the study was abandoned, as ordinary college students were transformed into either brutal, sadistic guards or emotionally broken prisoners. By illuminating the psychological causes behind such disturbing metamorphoses, Zimbardo enables us to better understand a variety of harrowing phenomena, from corporate malfeasance to organized genocide to how once upstanding American soldiers came to abuse and torture Iraqi detainees in Abu Ghraib. He replaces the long-held notion of the “bad apple” with that of the “bad barrel”—the idea that the social setting and the system contaminate the individual, rather than the other way around. This is a book that dares to hold a mirror up to mankind, showing us that we might not be who we think we are. While forcing us to reexamine what we are capable of doing when caught up in the crucible of behavioral dynamics, though, Zimbardo also offers hope. We are capable of resisting evil, he argues, and can even teach ourselves to act heroically. Like Hannah Arendt’s *Eichmann in Jerusalem* and Steven Pinker’s *The Blank Slate*, *The Lucifer Effect* is a shocking, engrossing study that will change the way we view human behavior. Praise for *The Lucifer Effect* “*The Lucifer Effect* will change forever the way you think about why we behave the way we do—and, in particular, about the human potential for evil. This is a disturbing book, but one that has never been more necessary.”—Malcolm Gladwell “An important book . . . All politicians and social commentators . . . should read this.”—*The Times* (London) “Powerful . . . an extraordinarily valuable addition to the literature of the psychology of violence or ‘evil.’”—*The American Prospect* “Penetrating . . . Combining a dense but readable and often engrossing exposition of social psychology research with an impassioned moral seriousness, Zimbardo challenges readers to look beyond glib denunciations of evil-doers and ponder our collective responsibility for the world’s ills.”—*Publishers Weekly* “A sprawling discussion . . . Zimbardo couples a thorough narrative of the Stanford Prison Experiment with an analysis of the social dynamics of the Abu Ghraib prison in Iraq.”—*Booklist* “Zimbardo bottled evil in a laboratory. The lessons he learned show us our dark nature but also fill us with hope if we heed their counsel. *The Lucifer Effect* reads like a novel.”—Anthony Pratkanis, Ph.D., professor emeritus of psychology, University of California

The Science of Self-report Arthur A. Stone,Christine A. Bachrach,Jared B. Jobe,Howard S. Kurtzman, Virginia S. Cain,1999-08 Rigorous methodological techniques have been developed in the last decade to improve the reliability and accuracy of self reports from research volunteers and patients about their pain, mood, substance abuse history, or dietary habits. This book presents cutting-edge research on optimal methods for obtaining self-reported information for use in the evaluation of scientific hypothesis, in therapeutic interventions, and in the development of prognostic indicators. ALTERNATE BLURB: Self-reports constitute critically important data for research and practice in many fields. As the chapters in this volume document, psychological and social processes influence the storage and recall of self-report information. There are conditions under which self-reports should be readily accepted by the clinician or researcher, and other conditions where healthy scepticism is required. The chapters demonstrate methods for improving the accuracy of self-reports, ranging from fine-tuning interviews and questionnaires to employing emerging technologies to collect data in ways that minimize bias and encourage accurate reporting. Representing a diverse group of disciplines including sociology, law, psychology, and medicine, the distinguished authors offer crucial food for thought to all those whose work depends on the accurate self-reports of others.

The Professional Guinea Pig Roberto Abadie,2010-07-30 The Professional Guinea Pig documents the emergence of the professional research subject in Phase I clinical trials testing the safety of drugs in development. Until the mid-1970s Phase I trials were conducted on prisoners. After that practice was outlawed, the pharmaceutical industry needed a replacement population and began to aggressively recruit healthy, paid subjects, some of whom came to depend on the income, earning their living by continuously taking part in these trials. Drawing on ethnographic research among self-identified "professional guinea pigs" in Philadelphia, Roberto Abadie examines their experiences and views on the conduct of the trials and the risks they assume by participating. Some of the research subjects he met had taken part in more than eighty Phase I trials. While the professional guinea pigs tended to believe that most clinical trials pose only a moderate health risk, Abadie contends that the hazards presented by continuous participation, such as exposure to potentially dangerous drug interactions, are discounted or ignored by research subjects in need of money. The risks to professional guinea pigs are also disregarded by the pharmaceutical industry, which has become dependent on the routine participation of experienced research subjects. Arguing that financial incentives compromise the ethical imperative for informed consent to be freely given by clinical-trials subjects, Abadie confirms the need to reform policies regulating the participation of paid subjects in Phase I clinical trials.

Posture Recognition for Fall Prevention with Low-Complexity UWB WBANs Robert Heyn,2023-04-04 In our increasingly interconnected world, personalized and technology-assisted healthcare has become a rising trend. In an ageing society, technology enables new ways to care for and assist the elderly. Falls pose a major risk and cause of injuries for senior citizens. Technology-backed fall prevention thus has the potential to avoid severe injuries and further loss of independence, but requires continuous monitoring of the body posture in order to identify imminent falls. This work presents a system concept for a wearable wireless body area network (WBAN) for posture monitoring. It shows the principal feasibility of posture recognition from ultra-wideband (UWB) signals based on a large and diverse set of measurements. For a promising classifier-feature-

combination, this work demonstrates how reliable posture recognition can be achieved with a limited number of body-mounted nodes, and analyzes its robustness towards potential pitfalls. It concludes with a proposal for a system implementation, and outlines its integration with existing and future aspects of personalized healthcare.

Experience Sampling in Mental Health Research Jasper Palmier-Claus, Gillian Haddock, Filippo Varese, 2019-01-25 Experience Sampling in Mental Health Research provides comprehensive and user-friendly guidance on when and how to apply this methodology in the assessment of clinical populations. Divided into three sections, the book offers step-by-step instruction on how to design, develop and implement an ESM study, as well as advice on how this approach might be adapted for common mental health difficulties. With an eye to the future of this type of research, the contributors also consider how ESM might be adapted for use as a form of clinical assessment and intervention. Experience Sampling in Mental Health Research combines the knowledge and expertise of leading international experts in the field, and will be helpful for students, researchers and clinicians wishing to start or develop their understanding of this methodology.

Behind the Shock Machine Gina Perry, 2013-09-03 When social psychologist Stanley Milgram invited volunteers to take part in an experiment at Yale in the summer of 1961, none of the participants could have foreseen the worldwide sensation that the published results would cause. Milgram reported that fully 65 percent of the volunteers had repeatedly administered electric shocks of increasing strength to a man they believed to be in severe pain, even suffering a life-threatening heart condition, simply because an authority figure had told them to do so. Such behavior was linked to atrocities committed by ordinary people under the Nazi regime and immediately gripped the public imagination. The experiments remain a source of controversy and fascination more than fifty years later. In *Behind the Shock Machine*, psychologist and author Gina Perry unearths for the first time the full story of this controversial experiment and its startling repercussions. Interviewing the original participants—many of whom remain haunted to this day about what they did—and delving deep into Milgram's personal archive, she pieces together a more complex picture and much more troubling picture of these experiments than was originally presented by Milgram. Uncovering the details of the experiments leads her to question the validity of that 65 percent statistic and the claims that it revealed something essential about human nature. Fleshed out with dramatic transcripts of the tests themselves, the book puts a human face on the unwitting people who faced the moral test of the shock machine and offers a gripping, unforgettable tale of one man's ambition and an experiment that defined a generation.

Experimentation with Human Beings Jay Katz, Alexander Morgan Capron, Eleanor Swift Glass, 1972-07-24 In recent years, increasing concern has been voiced about the nature and extent of human experimentation and its impact on the investigator, subject, science, and society. This casebook represents the first attempt to provide comprehensive materials for studying the human experimentation process. Through case studies from medicine, biology, psychology, sociology, and law—as well as evaluative materials from many other disciplines—Dr. Katz examines the problems raised by human experimentation from the vantage points of each of its major participants—investigator, subject, professions, and state. He analyzes what kinds of authority should be delegated to these participants in the formulation, administration, and review of the human experimentation process. Alternative proposals, from allowing investigators a completely free hand to imposing centralized governmental control, are examined from both theoretical and practical perspectives. The conceptual framework of *Experimentation with Human Beings* is designed to facilitate not only the analysis of such concepts as harm, benefit, and informed consent, but also the exploration of the problems raised by man's quest for knowledge and mastery, his willingness to risk human life, and his readiness to delegate authority to professionals and rely on their judgment.

Kant and the Foundations of Morality Halla Kim, 2015-02-26 Kim examines the fundamental tenets of Immanuel Kant's theory of morality structural-methodological point of view to highlight the activities of reason vis-à-vis the blind forces of brute nature. The study provides new perspective on

Kant's thought to benefit studies of epistemology, modern philosophy, moral theory and philosophy, and ethics.

Mixed Matches David M. Luebke,Mary Lindemann,2014-08-01 The significant changes in early modern German marriage practices included many unions that violated some taboo. That taboo could be theological and involve the marriage of monks and nuns, or refer to social misalliances as when commoners and princes (or princesses) wed. Equally transgressive were unions that crossed religious boundaries, such as marriages between Catholics and Protestants, those that violated ethnic or racial barriers, and those that broke kin-related rules. Taking as a point of departure Martin Luther’s redefinition of marriage, the contributors to this volume spin out the multiple ways that the Reformers’ attempts to simplify and clarify marriage affected education, philosophy, literature, high politics, diplomacy, and law. Ranging from the Reformation, through the ages of confessionalization, to the Enlightenment, *Mixed Matches* addresses the historical complexity of the socio-cultural institution of marriage.

Conducting Research with Human Participants Nathan Durdella,2022-02-15 Conducting Research with Human Participants: An IRB Guide for Students and Faculty by Nathan Durdella is the only guidebook students and faculty will need to navigate the IRB process and secure swift approval of research protocols. This book serves as an advisor to walk researchers through all the details of drafting, submission, and revision of materials for Institutional Review Boards so they can complete their research projects or dissertations faster. This text walks readers through the history of Institutional Review Boards, the contemporary context of ethical research, strategies to effectively draft, submit, and revise an IRB protocol, and guidance on working with an approved protocol in the field. The latest updates to the Common Rule and other regulatory frameworks, including special protections for working with vulnerable groups, are covered throughout the text. Not every research project goes according to plan, so adverse events and reporting receive special coverage. A final chapter on ethical research practices beyond IRB compliance encourages researchers to think through how to exit the field of research and ensure their research benefits the individuals, families, and communities in which they work. Take the guesswork out of the IRB process from start to finish with this handy guide.
