Questions About Language Laurie Bauer, Andreea S. Calude, 2020-05-19 Questions About Language sets out to answer, in a readable yet insightful format, a series of vital questions about language, some of which language specialists are regularly asked, and some of which are so surprising that only the specialists think about them. In this handy guide, sixteen language experts answer challenging questions about language, from What makes a language a language? to Do people swear because they don't know enough words? Illustrating the complexity of human language, and the way in which we use it, the twelve chapters each end with a section on further reading for anyone interested in following up on the topic. Covering core questions about language, this is essential reading for both students new to language and linguistics and the interested general reader.

The Logical Alien Sofia Miguens,2020-01-14 “A remarkable book capable of reshaping what one takes philosophy to be.” —Cora Diamond, Kenan Professor of Philosophy Emerita, University of Virginia Could there be a logical alien—a being whose ways of talking, inferring, and contradicting exhibit an entirely different logical shape than ours, yet who nonetheless is thinking? Could someone, contrary to the most basic rules of logic, think that two contradictory statements are both true at the same time? Such questions may seem outlandish, but they serve to highlight a fundamental philosophical question: is our logical form of thought merely one among many, or must it be the form of thought as such? From Descartes and Kant to Frege and Wittgenstein, philosophers have wrestled with variants of this question, and with a range of competing answers. A seminal 1991 paper, James Conant’s “The Search for Logically Alien Thought,” placed that question at the forefront of contemporary philosophical inquiry. The Logical Alien, edited by Sofia Miguens, gathers Conant’s original article with reflections on it by eight distinguished philosophers—Jocelyn Benoist, Matthew Boyle, Martin Gustafsson, Arata Hamawaki, Adrian Moore, Barry Stroud, Peter Sullivan, and Charles Travis. Conant follows with a wide-ranging response that places the philosophical discussion in historical context, critiques his original paper, addresses the

exegetical and systematic issues raised by others, and presents an alternative account. The Logical Alien challenges contemporary conceptions of how logical and philosophical form must each relate to their content. This monumental volume offers the possibility of a new direction in philosophy.

Communicating with Normal and Retarded Children W. I. Fraser, R. Grieve, 2014-05-15

Communicating with Normal and Retarded Children explores the way in which normal children acquire language and the mistakes they make. It aims to trace the common growth between professions in understanding of normal language development and the retarded person's language and to encourage research, particularly of an interdisciplinary kind. This book is organized into five main sections. The contributors provide different professional perspectives of how and why the mentally retarded get their communication wrong and what remedies can be applied. They also present their own research findings, often in little-explored areas or from a novel angle, and offer their opinion on the types and topics of

research that should be carried out. This book will be of interest to academic and clinical psychologists, educators, linguists, advisors and tutors in nursing and social studies, child health doctors, psychiatrists, and a range of therapists.

**Natural Kinds and Genesis** Stewart Umphrey, 2016-08-22 In *Natural Kinds and Genesis: The Classification of Material Entities*, Stewart Umphrey raises and answers two questions: What is it to be a natural kind? And are there in fact any natural kinds? First, using the everyday understanding of things, he argues that natural kinds may be understood as classes or as types, and that the members or tokens of such kinds are individual continuants. A continuant is essentially a being-in-becoming, a material thing which changes and yet remains the same, in virtue of its nature or essence, as long as it exists. In the primary sense of the term, then, a natural kind is a class whose members closely resemble one another substantially, in virtue of their essences. Alternatively, it is a type whose tokens exemplify it in virtue of their essences. To answer the second question, one must make use of relevant scientific theories as well. Umphrey agrees with scientific essentialists that there are natural kinds, but he argues that most of the chemical, physical, and biological kinds posited in current theories are not natural kinds in the primary sense of the term. The natural-kinds realism he affirms is thus quite restricted: it requires the existence of enduring things which closely resemble one another in virtue of their essences, and such things exist, apparently, only if they have come into being, or emerged, in the course of symmetry-breaking events. *Natural Kinds and Genesis* will be of interest to philosophers of science and to those interested in the metaphysics of natural kinds and their members.

*The Origins, Prevention and Treatment of Infant Crying and Sleeping Problems* Ian St James-Roberts, 2013-07-03 Babies who cry a lot, or are unsettled in the night, are common sources of concern for parents and, consequently, costly problems for health services. In this book, Ian St James-Roberts summarises the evidence concerning infant crying and sleeping problems to provide a new evidence-based approach to these common challenges for parents and health services. The book begins by distinguishing between infant and parental parts of the problems and provides guidelines for assessing each issue. Topics covered include: • the pros and cons of 'infant-demand' versus 'limit-setting' forms of parenting • causes of infant 'colicky' crying and night waking • effects of night-time separations on infant attachments • interventions such as swaddling, herbal remedies, and 'controlled crying.' Since there is now firm evidence that parents' vulnerabilities and cultural backgrounds affect how problems are defined and guidance is acted upon, and that parents who wish to do so can reduce infant crying and unsettled night waking, social factors are considered alongside medical issues. Translating research evidence into practical tools and guidance, *The Origins, Prevention and Treatment of Infant Crying and Sleeping Problems* will be essential reading for a wide range of healthcare professionals including mental health staff, social workers, midwives, health visitors, community physicians and paediatricians.

**Natural Learning for a Connected World** Renate Nummela Caine, 2011-04-08 Why do video games fascinate kids so much that they will spend hours pursuing a difficult skill? Why don't they apply this kind of intensity to their school work? In their most penetrating and important work in years, these two leaders in the field of brain-based education build a

bridge to the future of education with a dynamic model of teaching that works for all grade levels and in all cultural and ethnic groups. The authors' education model, the Guided Experience Approach, is based on the way that biologists see learning as a totally natural, continuous interaction between perception and action. Natural Learning for a Connected World provides a practical, step-by-step description and successful examples from practice of this perception action cycle so that we can finally provide the learning environments essential for our children to thrive in the knowledge age.

*Old and New Unsolved Problems in Plane Geometry and Number Theory* Victor Klee, Stan Wagon, 2020-07-31 Victor Klee and Stan Wagon discuss some of the unsolved problems in number theory and geometry, many of which can be understood by readers with a very modest mathematical background. The presentation is organized around 24 central problems, many of which are accompanied by other, related problems. The authors place each problem in its historical and mathematical context, and the discussion is at the level of undergraduate mathematics. Each problem section is presented in two parts. The first gives an elementary overview discussing the history and both the solved and unsolved variants of the problem. The second part contains more details, including a few proofs of related results, a wider and deeper survey of what is known about the problem and its relatives, and a large collection of references. Both parts contain exercises, with solutions. The book is aimed at both teachers and students of mathematics who want to know more about famous unsolved problems.

Religion and the Natural Sciences James E. Huchingson, 2005-02-07 The first half of 'Religion and the Natural Sciences' is an introduction to the discussion of science and

religion. Here the reader learns why there is any debate at all and what resources exist for responding to it. The second half deals with specific issues that arise in the individual sciences, from astronomy and physics to biology and ecology. Any project hoping to connect science and religion must supply the categories of connection, which are found primarily, although not exclusively, in philosophy. The simplicity of the arrangement and the nature of the selections are intended to make 'Religion and the Natural Sciences' available to as wide an audience as possible, including students from the sciences and technology, the professions, the humanities and liberal studies, and theology.
