Charles Dickens and the Great Theatre of the World Simon Callow, 2012-08-07 A short biography of Charles Dickens by acclaimed actor and writer Simon Callow that offers a fresh perspective on one of the greatest novelists in the English language in a lively, highly readable account. It has all the gusto that a popular biography of Dickens—a man who “could do nothing by halves”—should possess. . . . The best biography for Dickens newcomers and a wonderful read for all.—Library Journal Dickens was one of the first true celebrity authors. Thousands of fans in Britain and America eagerly awaited each new

installment of his stories and flocked to see him on his legendary speaking tours. Not only did he create an incredible cast of characters on the page, but he was also a dazzling mimic and storyteller, and he wrote, stage-managed, and acted in plays for the public. Throughout his life, from his childhood performances in pubs to his legendarily powerful reading tours, Dickens was fanatical about the stage. Callow reveals Dickens's genius on and off the page and offers a compelling insight into a life that was driven as much by performance and showmanship as by literature.

Amorphous and Liquid Semiconductors J. Tauc, 2012-12-06 Solid state physics after solving so successfully many fundamental problems in perfect or slightly imperfect crystals, tried in recent years to attack problems associated with large disorder with the aim to understand the consequences of the lack of the long-range order. Semiconductors are much more changed by disorder than metals or insulators, and appear to be the most suitable materials for fundamental work. Considerable exploratory work on amorphous and liquid semiconductors was done by the Leningrad School since the early fifties. In recent years, much research in several countries was directed to deepen the understanding of the structural, electronic, optical, vibrational, magnetic and other properties of these materials and to possibly approach the present level of understanding of crystalline semiconductors. This effort was stimulated not only by purely scientific interest but also by the possibility of new applications from which memory devices in the general sense are perhaps the most challenging. The research met with serious difficulties which are absent in crystals.

Modular Chemistry Josef Michl, 2012-11-06 Modular Chemistry: the First Steps In recent years, there has been increasing interest among chemists, physicists, materials scientists, biologists, engineers, and others in the assembly of well defined, relatively large functional structures from repetitive units that themselves are molecules of some complexity. Using the dictionary definition of a module (a detachable section, compartment, or unit with a specific purpose or function, and in electronics, a compact assembly functioning as a component of a larger unit) [1], we feel that this newly emerging field of endeavor could be called modular chemistry [2]. The NATO Advanced Research Workshop on Modular Chemistry that was held on September 9 to 12, 1995, at Aspen Lodge near Estes Park, Colorado, was meant to bring together prominent contributors to modular chemistry as it is being born, and to examine the associated birth pangs. It was concluded that although real, these are not nearly as bad as giving birth to a hedgehog tail first, and that the ultimate rewards were likely to be far more satisfying in terms of new ideas and enabling methodology. The level of excitement about the possibilities that are opening up for modular chemists, and also the challenge involved, are perhaps best documented by noting that the planned discussion periods at the workshop were as long as the oral presentation periods, and yet, each discussion ran over the allocated time.

Supertagging Srinivas Bangalore, Aravind Krishna Joshi, 2010 Investigations into employing statistical approaches with linguistically motivated representations and its

impact on Natural Language processing tasks. The last decade has seen computational implementations of large hand-crafted natural language grammars in formal frameworks such as Tree-Adjoining Grammar (TAG), Combinatory Categorical Grammar (CCG), Head-driven Phrase Structure Grammar (HPSG), and Lexical Functional Grammar (LFG). Grammars in these frameworks typically associate linguistically motivated rich descriptions (Supertags) with words. With the availability of parse-annotated corpora, grammars in the TAG and CCG frameworks have also been automatically extracted while maintaining the linguistic relevance of the extracted Supertags. In these frameworks, Supertags are designed so that complex linguistic constraints are localized to operate within the domain of those descriptions. While this localization increases local ambiguity, the process of disambiguation (Supertagging) provides a unique way of combining linguistic and statistical information. This volume investigates the theme of employing statistical approaches with linguistically motivated representations and its impact on Natural Language Processing tasks. In particular, the contributors describe research in which words are associated with Supertags that are the primitives of different grammar formalisms including Lexicalized Tree-Adjoining Grammar (LTAG). Anche il tempo vola. Storie di un pilota di linea Bennett M Paper Staff, Carlo Galiotto, 1996 La professione di pilota di linea ha sempre avuto un grande fascino. Un po' perché bisogna essere persone speciali per condurre un mezzo elegante e tecnologicamente avanzato come un aeroplano. E un po' perché questo tipo di lavoro permette di visitare un gran numero di nazioni e luoghi esotici sparsi per il mondo. Quindi chi meglio di un pilota con esperienza trentennale può raccontare con accuratezza e fedeltà non solo la propria professione, ma anche le più interessanti esperienze di viaggio? Anche il tempo vola fa proprio questo: mette a disposizione del lettore avventure (e disavventure) di bordo vissute direttamente nella cabina di pilotaggio, ma anche racconti ed esplorazioni dei luoghi visitati dal pilota una volta sbarcato dall'aereo. Ed è proprio grazie all'opportunità delle sue soste tra un imbarco e l'altro che l'autore condivide con noi quanto di bello, curioso e interessante ha scoperto in giro per il mondo, da Istanbul a Mumbai, da New York ad Addis Abeba. Un libro che scorre veloce, portandoci in situazioni e luoghi che da normali turisti difficilmente potremmo cogliere o scoprire. La versione digitale è la prima del nostro catalogo in formato ePub 3, conforme allo standard WCAG 2.0 AA di accessibilità dei contenuti, in modo che anche non vedenti e dislessici possano fruire al meglio delle nostre pubblicazioni.
