ROCKETRY Carla Mooney, 2014-09-16 Rocketry: Investigate the Science and Technology of Rockets and Ballistics introduces students to the fascinating world of rocketry and ballistics. Readers discover the history of rocket development, from the earliest fire arrows in China to modern-day space shuttles, as well as the main concepts of rocketry, including how rockets are launched, move through the atmosphere, and return to earth safely. Exploring the science behind rocket flight, kids learn how the forces of thrust, gravity, lift, and drag interact to determine a rocket's path, then imagine new uses and technologies in rocketry that are being developed today and for the future. Combining hands-on activities with physics, chemistry, and mathematics, Rocketry brings fun to learning about the world of rocket science. Entertaining illustrations and fascinating sidebars illuminate the topic, while Words to Know highlighted and defined within the text reinforce new vocabulary. Projects include building a pneumatic blast rocket and launcher, testing a rocket recovery system, and designing a rocket model of the future. Additional materials include a glossary, and a list of current reference works, websites, and Internet resources. This title meets Common Core State Standards for literacy in science and technology; Guided Reading Levels and Lexile measurements indicate grade level and text complexity.

Hermann Oberth: One of the Fathers of Rocketry David Myhra PhD, 2013-09-28 Hermann Oberth: One of the Fathers of Rocketry. Inventor of the Multistage Rocket & A Believer in OFOs With Intelligent Beings on Far Away Planets in the Universe Transylvania-born Hermann Julius Oberth (25 June 1894-28 December 1989) was an amateur bi-fuel liquid rocketeer and a best-selling author about rocket engine research, development and interplanetary space travel. He also created design ideas for orbiting space solar mirrors...their concentrated energy beamed down to Earth for peaceful purposes as well as military uses as a "death ray." This is the story of some of his most interesting projects!

Blazing the Trail Mike Gruntman, 2004 Winner of the Luigi Napolitano Award (2006) from the International Academy of Astronautics This book presents the fascinating story of the events that paved the way to space. It introduces the reader to the history of early rocketry and the subsequent developments that led into the space age. People of various nations and from various lands contributed to the breakthrough to space, and the book takes the reader to faraway places on five continents. It also includes many quotes to give readers a flavor of how the participants viewed the developments. Most publications on the topic either target narrow aspects of rocket history or are

popular books that scratch the surface, with minimal and sometimes inaccurate technical details. This book bridges the gap. It contains numerous technical details usually unavailable in popular publications. The details are not overbearing and anyone interested in rocketry and space exploration will navigate through the book without difficulty. There are 340 figures and photographs, many appearing for the first time.

Launch Magazine's History of American Rocketry Mark Mayfield, 2021-09-21 A must-have for anyone fascinated by space travel, rocketry, NASA, SpaceX, and more! A new era in spaceflight, led by SpaceX and other commercial rocket companies, is generating the kind of worldwide interest in space travel that we haven't seen since the space race of the 1960s. Kids are dreaming of becoming astronauts again. New feats, such as SpaceX's remarkable ability to land booster rockets, under powered descent, back on land or sea has galvanized a new generation of rocket enthusiasts. Yet none of this would be possible without the advances of rocketry over the past century. The Chinese were the first to develop black-powder fireworks and rockets centuries ago, but modern rocketry truly began with Robert Goddard's launch of a liquid-fueled rocket on a Massachusetts farm in 1926. That metal contraption—which flew just 41 feet high before arching over and streaking 184 feet into a cabbage patch—came just 43 years before Neil Armstrong stepped foot on the moon on July 20, 1969. Armstrong's Apollo 11 mission was made possible by a giant 36-story-tall Saturn V rocket that used some of the same propulsion principles as Goddard's first tiny, crude rockets. The beginning of the "Space Age" is considered to be Russia's launch of the world's first satellite, Sputnik, in 1957. But it was the pioneering human spaceflights of the 1960s that captured the imagination of the world and turned astronauts into heroes. Weapons of war—the Redstone, Atlas, and Titan II missiles—were converted into civilian launch boosters and led to the success of the Mercury and Gemini programs. All the while, Saturn rockets were being developed that would ultimately lead to the moon missions. Kids were so excited about these pioneering space flights that an entirely new hobby—model rocketry—was created to serve their interests. Small scale models of NASA's big rockets were ordered by the millions, generating a \$100 million hobby at a time when there were no video games, no internet, and no cable, just three broadcast television networks. Now, the next generation of rockets from SpaceX and other commercial companies, along with NASA's new launch vehicles and Orion spacecraft, will lead the United States and the world into a new era of rocketry—beginning with crewed flights to the moon as early as 2024, and ultimately to Mars within the first half of this century.

The Future of U.S. Rocketry Edward Hujsak, 1994 From Space News. January 27, 1997: Many would do well reading this treasure of facts covering the development of U.S. launch vehicles. Starting from American Robert Goddard's pioneering work, Hujsak provides an overview of a half-century of booster business. The Atlas, Delta, Titan, space shuttle and its derivations are covered, as are the Delta Clipper and the single-stage-to-orbit National Aerospace Plane project. Also covered is past work on nuclear-powered rockets, as well as looks at unconventional propulsion using lasers and interstellar ramjets. This is a straightforward, no-nonsense easy-to-read book, particularly for those unfamiliar with the evolution of U.S. space launch capability.

History of Rocketry & Space Travel Wernher Von Braun, Frederick Ira Ordway, Frederick Ira Ordway (III), 1975 It

reviews the work of three great pioneers of the early part of the twentieth century - America's Goddard, Germany's Oberth, and Russia's Tsiolkovsky - as well as the accomplishments of Esnault-Pelterie in France, Isaac Lubbock's work on liquid propellants in Great Britain, and the development of the Russian Katyusha. It details the experiments of von Braun and Walter R Dornberger in German before World War II, and gives a full account of the work of their development team on the V-2 rocket at the Peenemunde Center. The dramatic story of the German scientists' surrender to American forces in 1945, as well as their eventual accomplishments at the Army's Redstone Arsenal and subsequently NASA's Marshall Space Flight Center in Huntsville, Alabama, is also told at first hand.

Red Cosmos James T. Andrews, 2009-07-24 Long before the space race captured the world's attention, K. E. Tsiolkovskii first conceived of multi-stage rockets that would later be adapted as the basis of both the U.S. and Soviet rocket programs. Often called the grandfather of Russian rocketry, this provincial scientist was even sanctioned by Stalin to give a speech from Red Square on May Day 1935, lauding the Soviet technological future while also dreaming and expounding on his own visions of conquering the cosmos. Later, the Khrushchev regime used him as a poster boy for Soviet excellence during its Cold War competition with the United States. Ironically, some revisionists have since pointed to such blatant promotion by the Communist Party in an attempt to downplay Tsiolkovskii's scientific contributions. James T. Andrews explores the complexities of this man to show that Tsiolkovskii was much more than either a rocket inventor or a propaganda tool. He was a science popularizer, novelist, technical inventor, and visionary, whose science fiction writings included futuristic drawings of space stations long before they appeared on any engineer's drawing board. Mining a myriad of Russian archives, Andrews produces not only a biographical account but also a study of Soviet technological propaganda, local science education, public culture in the 1920s and 1930s, and the cultural ramifications of space flight.

1ST GOLDEN AGE ROCKETRY Frank H. Winter, 1990-06-17 This is the first comprehensive book on the history of gunpowder rockets. As complex and varied as modern rockets are, they all have a common ancestor--the modest gunpowder rocket--which saw its peak development in the last century. In the early 1880s, Englishman William Congreve changed the face of rocketry by initiating the modern process of research and development. William Hale, Congreve's compatriot, introduced major improvements in rocketry using the advances of the Industrial Revolution in steam power and metallurgy. Frank Winter discusses in detail the international impact of Congreve and Hale rockets for seven major and nine minor European countries, the Americas, India, China, and the Middle East. He describes the applications of the gunpowder rocket to areas as varied as scientific inquiry, whaling, torpedoes, and flying machines. This definitive book assesses the achievements of Congreve and Hale in light of other forms

of artillery of the day. It will prove to be a valuable contribution to the history of technology and military history. -- Dust jacket.

The Death of Rocketry Joel Dickinson,Bob Cook,2012-09-08 The story of the first successful reactionless space drive and how it uncovered the greatest loophole in modern physics. Learn about Bob Cook, a legendary pioneer in the inertial propulsion field who invented and patented the Cook Coriolis (CC) drive and the Cook Inertial Propulsion (CIP) engine. This new 2012 edition updates the original 1980 publication, up to the current CID Engine Project of Bob's son, Rob, Jr. By Joel Dickinson with Bob Cook Updated and Edited by Rob Cook, Jr.

Single Stage to Orbit Andrew J. Butrica,2003-10-22 While the glories and tragedies of the space shuttle make headlines and move the nation, the story of the shuttle forms an inseparable part of a lesser-known but no less important drama—the search for a reusable single-stage-to-orbit rocket. Here an award-winning student of space science, Andrew J. Butrica, examines the long and tangled history of this ambitious concept, from its first glimmerings in the 1920s, when technicians dismissed it as unfeasible, to its highly expensive heyday in the midst of the Cold War, when conservative-backed government programs struggled to produce an operational flight vehicle. Butrica finds a blending of far-sighted engineering and heavy-handed politics. To the first and oldest idea—that of the reusable rocket-powered single-stage-to-orbit vehicle—planners who belonged to what President Eisenhower referred to as the military-industrial complex added experimental (X), aircraft-like capabilities and, eventually, a faster, cheaper, smaller managerial approach. *Single Stage to Orbit* traces the interplay of technology, corporate interest, and politics, a combination that well served the conservative space agenda and ultimately triumphed—not in the realization of inexpensive, reliable space transport—but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty-first century. -- D. M. Ashford
