Modern High-Power Rocketry 2 Mark Canepa, 2005-06-02 This Second Edition of Modern High-Power Rocketry contains more than 800 photographs and illustrations specifically created to introduce the model rocket enthusiast to the exciting world of high power. Completely rewritten, photographed and designed, this book provides tips and simple advice on motor retention, ejection charges, the high-power launch and building your first Level One, Level Two and Level Three rockets.

The Rocket Team Frederick Ira Ordway (III), Mitchell R. Sharpe, 1982 From the V-2 to the Saturn moon rocket, this is the inside story of the von Braun team, a group whose experiments in pyrotechnics eventually changed the course of world history.

Douglas D-558-2 Skyrocket Scott Libis, 2002 Comic book stuff was the typical response on one would draw in 1938 when the subject of rocket propulsion came up. To most, the subject of rocket power conjured up images of Buck Rogers and the Saturday afternoon matinee. Rocketry was the flight of fantasy science fiction writers used to transport their audiences to new worlds. But it was also during this time that visionaries like Dr. Robert Goddard and Dr. Theodor Von Karman worked developing their theories of rocket science. The D-558 program was a Douglas Aircraft Company contract with the U.S. Navy and NACA (National Advisory Committee for Aeronautics), intended to produce an aircraft for the purpose of exploring transonic and supersonic flight.

Rockets and People Volume II Boris Chertok, 2006-06-01 Much has been written in the West on the history of the Soviet space program but few Westerners have read direct first-hand accounts of the men and women who were behind the many Russian accomplishments in exploring space. The memoirs of Academician Boris Chertok, translated from the original Russian, fills that gap. This official NASA history series document has been converted for accurate flowing-text e-book format reproduction. In this Volume 2, Chertok takes up the story with the development of the world's first intercontinental ballistic missile (ICBM) and ends with the launch of Sputnik and the early Moon, Mars, and Venus probes. His engaging accounts of these dramatic and historic years reveal repeated failures, technical problems, and governmental struggles that marked the opening of the space race in the Soviet Union. An extensive technical discussion provides new details about the tragic Nedelin Disaster in October 1960 which killed over 100 workers attempting to launch an ICBM. Chertok calls it most horrific disaster in the history of missile and space technology. Contents: Three New Technologies, Three State Committees * The Return * From Usedom Island to Gorodomlya Island * Institute No. 88 and Director Gonor * The Alliance with Science * Department U * Face to Face with the R-1 Missile * The R-1 Missile Goes Into Service * Managers and Colleagues * NII-885 and Other Institutes * Air Defense Missiles * Flying by the Stars * Missiles of the Cold War's First Decade * On the First Missile Submarine * Prologue to Nuclear Strategy * The Seven Problems of the R-7 Missile * The Birth of a Firing Range * 15 May 1957 * No Time for a Breather * Mysterious Illness * Breakthrough into Space * Flight-Development Tests Continue * The R-7 Goes into Service * From Tyuratam to the Hawaiian Islands and Beyond * Lunar Assault * Back at RNII * The Great Merger * First School of Control in Space * Ye-2 Flies to the Moon and We Fly to Koshka * The Beginning of the 1960s * Onward to Mars...and Venus * Catastrophes Chertok began his career as an electrician in 1930 at an aviation factory near Moscow. Twenty-seven years later, he became deputy to the founding figure of the Soviet space program, the mysterious Chief Designer Sergey Korolev. Chertok's sixty-year-long career and the many successes and failures of the Soviet space program constitute the core of his memoirs, *Rockets and People*. In these writings, spread over four volumes, Academician Chertok not only describes and remembers, but also elicits and extracts profound insights from an epic story about a society's quest to explore the cosmos. NASA issued a statement about the passing of this pioneer: Russian rocket designer Boris Yevseyevich Chertok, one of the founding fathers of the Russian space program, passed away on Dec. 14, 2011 at the age of 99. We share the loss of Boris Chertok with our Russian colleagues, said Bill Gerstenmaier, NASA associate administrator for Human Exploration and Operations. He was he a spaceflight pioneer and an inspiration to everyone associated with spaceflight. I remember him coming into the control center in Moscow in the middle of the night at the age of 97. He was an inspiration to every flight controller in Moscow. I also

remember fondly sitting in Korolev's apartment in Moscow, now a museum, and having Boris describe meetings with Korolev, the general designer, at his kitchen table. The passion in Boris' eyes and voice gave me a unique insight into the Russian team and operations. Boris's speech this year at the 50th anniversary of Gagarin's flight was amazing and awe inspiring. His books and memoirs are a true treasure. He was a friend of NASA and he will be missed. His spirit will live on in the hearts of the Russian and American human spaceflight team.

Ignition! John Drury Clark, 2018-05-23 This newly reissued debut book in the Rutgers University Press Classics Imprint is the story of the search for a rocket propellant which could be trusted to take man into space. This search was a hazardous enterprise carried out by rival labs who worked against the known laws of nature, with no guarantee of success or safety. Acclaimed scientist and sci-fi author John Drury Clark writes with irreverent and eyewitness immediacy about the development of the explosive fuels strong enough to negate the relentless restraints of gravity. The resulting volume is as much a memoir as a work of history, sharing a behind-the-scenes view of an enterprise which eventually took men to the moon, missiles to the planets, and satellites to outer space. A classic work in the history of science, and described as "a good book on rocket stuff...that's a really fun one" by SpaceX founder Elon Musk, readers will want to get their hands on this influential classic, available for the first time in decades.
